> - Bring on experienced river water treatment operational management in the City of Flint
> - Require water testing data to be released quarterly by law in all Michigan communities
>
> **Access**
>
> - Announce an amnesty program for turn-ons and reduce the turn-on cost in Flint
> - Develop a revised payment plan policy to allow customers to come back on to the Flint system

- New Federal and State partnership to establish new Drinking Water Emergency Assistance Fund for customers (modeled on Federal and State energy utility programs: Low Income Home Energy Assistance Program; Michigan Energy Assistance Program; State Emergency Relief)

Investment

- Accelerate water system improvements outlined in the City of Flint Capital Improvement Plan through Federal and State Investments
- State approves City of Flint's Distressed Cities Fund applications
- Federal and State forgiveness of payment to Drinking Water Revolving Loan Fund
- Federal and State financing for future improvements
- City Water Department implements budgeted FY15 projects including leak detection, valve repairs, new pipes and meter replacements

Education

- Develop a community partnership to provide household and business customers with information on testing and conservation
- Ongoing partnership with Michigan Department of Human Services, United Way, Salvation Army and community organizations to provide information on water assistance
- Expand youth energy initiative to assist households with conservation and efficiency (piloted in summer 2014 with Northwestern High School students, EcoWorks and Consumers Energy)

The struggle with our water has gone on for too long. The state must take action and do its part.

Please ask Gov. Snyder to take action immediately to implement my plan and ensure Flint's water is safe.

Thank you for your ongoing support.

Sincerely,

Dayne

Please contact Gov. Snyder by calling (517) 335-6397 (or by clicking here) and ask him to take action immediately to implement my plan and ensure Flint's water is safe.

My plan offers new ideas and also builds on successful models of utility, energy and assistance programs at the state and federal levels. Here is my plan:

Safety & Quality

- 100% Safety is the standard
- City of Flint releases testing data to assure safety and expands testing to households with support from the Michigan Department of Environmental Quality
- Support alternatives for those advised not to drink the water by their doctors through the Michigan Health Endowment Fund and community partners to protect the vulnerable like seniors and infants
- Bring on experienced river water treatment operational management in the City of Flint
- Require water testing data to be released quarterly by law in all Michigan communities

Access

- Announce an amnesty program for turn-ons and reduce the turn-on cost in Flint
- Develop a revised payment plan policy to allow customers to come back on to the Flint system
- New Federal and State partnership to establish new Drinking Water Emergency Assistance Fund for customers (modeled on Federal and State energy utility programs: Low Income Home Energy Assistance Program; Michigan Energy Assistance Program; State Emergency Relief)

Investment

- Accelerate water system improvements outlined in the City of Flint Capital Improvement Plan through Federal and State Investments
- State approves City of Flint's Distressed Cities Fund applications
- Federal and State forgiveness of payment to Drinking Water Revolving Loan Fund
- Federal and State financing for future improvements
- City Water Department implements budgeted FY15 projects including leak detection, valve repairs, new pipes and meter replacements

Education

- Develop a community partnership to provide household and business customers with information on testing and conservation
- Ongoing partnership with Michigan Department of Human Services, United Way, Salvation Army and community organizations to provide information on water assistance
- Expand youth energy initiative to assist households with conservation and efficiency (piloted in summer 2014 with Northwestern High School students, EcoWorks and Consumers Energy)

The struggle with our water has gone on for too long. The state must take action and do its part.

Please ask Gov. Snyder to take action immediately to implement my plan and ensure Flint's water is safe.

Thank you for your ongoing support.

Sincerely,

Dayne

Subject: FW: Flint Public Meeting Carpool
Importance: High

See below. There's a public meeting in the city of Flint tonight regarding the ongoing challenges with their drinking water system. The public has concerns – some the result of the city's poor communication efforts, some (I suspect) the result of folks who stir the public fear pot for political leverage. But the City apparently sent a letter to the Governor today. I have not seen it, but wanted to put a flare in the air. See below.

Brad,

Mike and I are available most of the day. I have a conference call 11-12 and an offsite meeting 2:30-4:30. Just come down to the first floor whenever you have time.

The issue has further escalated this morning with a letter from the Flint Mayor to the Governor requesting additional assistance.

Subject: RE: Flint Public Meeting Carpool

Steve, thanks and my apologies for missing our confab yesterday afternoon. SOS stuff made for a crazy day.
Not sure I'm going to make it to Flint tonight, but wanted to spend a few minutes today if you've got time.
Bluntly, I have tremendous confidence in you and Mike to handle yourselves admirably with the public and press.
My only concern is that the City has communicated so poorly that we could end up in position to serve as their defacto spokespeople.
Let me know if you've got a few today.

Hi Terry,

Sara and Jarrod asked me to touch base about the big water meeting in Flint last night. There's a chance G will encounter some Flint television reporters soon.

The info you provided yesterday was great.

Do you or Jerry have any talking points about the issue that we could give the governor, and is there anything in particular you think he should say if asked about the situation?

Thank you very much!

Importance: High

Dave…

Please see the attached, which includes the info I shared yesterday. I have asked Brad at DEQ if he has anything more, as they have had more involvement on the water issue. I will forward anything he sends me. I believe there is a meeting next week with the G to discuss this issue, though clearly he may face media questions well before that occurs.

We suggest the G say the ***residents deserve clean, safe water and EM Jerry Ambrose, his management team and the DEQ are working to ensure that…and that the State will be a resource where and when possible (as we have with other issues, ie, crime).***

I cannot speak to other "requests" in the Mayor's letter (dated 1-18), which seek waivers, Federal and State funding, etc.

As you will see in the document, the city is committed to addressing the issue and in fact, has taken numerous steps (with guidance and/or approval from DEQ) to date.

Hope this helps.

Talking Points:

The City, in conjunction with the Dept. of Environmental Quality, is working diligently…every day…to ensure Flint residents have access to clean, safe water. To that end, the City has issued an RFP soliciting expert assistance to assure the City is doing everything it needs to be doing.

The city continues to work closely with staff from the Department of Environmental Quality (DEQ) to ensure water meets safety guidelines, that water operations are managed properly, and all regulations are met.

The city is committed to addressing the issue and continues to pursue its strategy.

Background:

On December 16, 2014, the City of Flint received a violation notice from the Michigan Department of Environmental Quality (DEQ), stating the City water samples were in violation of Maximum Contaminant Levels (MCL), a violation of the Safe Drinking Water Act (PA 399 of 1976).

The DEQ considers the violation period to have begun December 1, 2014. The violation was triggered when water sample reports showed that the City's water quality, on average, exceed the total allowable level of *Disinfection Byproducts* during the first three quarters of 2014. Further, four of the City's eight water sample site locations individually exceeded allowable MCL levels during the same period of 2014.

These conditions are considered a Tier 2 violation and, as a result, the City was required to notify the public of these contamination levels by January 10, 2015 (which was done) and continue to notify them every three months until the violation is resolved.

The City outlined some potential remedies to the problem in its initial Operational Evaluation Report, dated November 26, 2014. These potential remedies are intended to be implemented in stages. Stage 1 consists of actions that can be implemented without any new construction within the distribution system and are due to be implemented by early March 2015.

- Troubleshooting of the ozone system.
- Implementation of different testing methods.
- Operational changes at the Water Treatment Plant.
- Increase water main flushing efforts to minimize stagnant water.
- Identify areas with high water age and implement preemptive measures.

The City will be providing additional potential solutions when it updates the Operational Evaluation Report, which must be submitted to the DEQ by March 1, 2015.

To date, the City has taken the following actions:

As an integral part of the transition to the Flint River on a temporary basis, the MDEQ was consulted about the City's plans, and ultimately issued necessary permits to proceed. The City also engaged the services of the LAN engineering firm to guide the city in installing the necessary equipment to treat the water on an ongoing basis. This resulted in the development of a comprehensive drinking water plan.

The City monitors its water quality on a daily basis to assure that water quality remains within established guidelines. With the variances in water temperature and the leakage and infiltration problems arising as the result of failure of parts of the distribution system, water quality did exceed, for a time, some of the established guidelines. This resulted in the issuance of the recent notices to the public.

Efforts taken to address non-compliance included increasing water flow through valve replacements and hydrant flushing and optimizing treatment processes.

The City has committed to increasing communication with the public in order to inform water users factually of the issues which have arisen, to alleviate unnecessary concern and to identify steps being taken to address the issues. This is being implemented through detailed educational materials being made available both online and at City Hall, as well as through public informational meetings. Additionally, a full Water System Questions and Answers document is available online.

Additional information:

State and city officials have said exposure to TTHM is a long-term concern for some if they drink water with elevated TTHM for several decades.

Notices indicated that Flint water is safe to drink but warns those with a "severely compromised immune systems or who are elderly" may be at increased risk and should seek advice about drinking water from your health care provider.

The city and county are partners in the Karegnondi Water Authority, which is building a pipeline to Lake Huron to bring lake water here for use by the end of 2016.

Returning to DWSD would add approximately $1 million (monthly) to the City expenses.

Subject: Story on Flint drinking water

Hi, Dave,
I am working on a deadline story about Flint's drinking water. My story will focus on state involvement and state policy.

My major questions:
1. What is the governor's response to the letter Mayor Walling sent last week asking for assistance?
2. What other state agencies - if any - can help residents (especially the poor) who are asking for help filtering water or getting higher quality water?
3. Essentially - with some residents complaining about the water quality - what the can the state do to help?

Could you please give me a comment/call today?

Subject: Re: Story on Flint drinking water

Gotcha. At the same time, could you also provide a comment since the letter was addressed to the governor?

My story will highlight that the mayor asked for some increased state involvement, investment and policy changes; specifically, he recommended/asked that:
1. Water testing data be reported publicly no less than quarterly by law in all Michigan communities in Flint's population category
2. Federal and State partnerships be designed to establish new Drinking Water Emergency Assistance Fund for the elderly and vulnerable families
3. Water systems improvements outlined in the City of Flint Capital Improvement Plan be accelerated through Federal and State Investments; State approves City of Flint's Distressed Cities Fund applications

Which of these is doable or under consideration?

Gotcha. At the same time, could you also provide a comment since the letter was addressed to the governor?

My story will highlight that the mayor asked for some increased state involvement, investment and policy changes; specifically, he recommended/asked that:
1. Water testing data be reported publicly no less than quarterly by law in all Michigan communities in Flint's population category
2. Federal and State partnerships be designed to establish new Drinking Water Emergency Assistance Fund for the elderly and vulnerable families
3. Water systems improvements outlined in the City of Flint Capital Improvement Plan be accelerated through Federal and State Investments; State approves City of Flint's Distressed Cities Fund applications

Which of these is doable or under consideration?

Hi, Dave,
I am working on a deadline story about Flint's drinking water. My story will focus on state involvement and state policy.

My major questions:
1. What is the governor's response to the letter Mayor Walling sent last week asking for assistance?
2. What other state agencies - if any - can help residents (especially the poor) who are asking for help filtering water or getting higher quality water?
3. Essentially - with some residents complaining about the water quality - what the can the state do to help?

Could you please give me a comment/call today?

Subject: RE: Call from Bridge magazine on Flint water

Thanks for the note and heads up, Karen.

This really need to be a conversation that's had with our teams (Gov, DEQ & Treasury) real quick. It's likely that you or Treasury are going to need to be the leads, *not* the governor's office.

Apparently, FYI, one of your folks (Steve Busch) has already had long conversations with Chastity, who is a tenacious reporter just in case you may not be familiar with her.

Looping in Dave M who's helping pull background and latest on this together. He'll be in touch asap.

Thanks much,
SW

Hi Dave,
Here's the info Steve Busch on our drinking water staff has already sent to Chastity. I didn't realize the question on the mayor's letter to the Governor was just one question in a string of them, so it looks like he did provide quite a bit of information already. However, he has not had any other conversation with her.

Sara said you would be in touch on coordinating a response, so I wanted to make sure you had all the info. Let me know how you'd like to proceed. Karen

Subject: interview for article on Flint drinking water

Hi,
I am a reporter for Bridge Magazine working on a deadline story about Flint's drinking water. My story will focus on state involvement and state policy.

My major questions:

1. Several agencies and officials are involved - can you clarify DEQ's role in the Flint water situation?

The City of Flint water system is one of over 1400 Community Water Systems in Michigan regulated under the Michigan Safe Drinking Water Act (1976 Public Act 399, as amended), which incorporates requirements of the federal Safe Drinking Water Act. The DEQ Office of Drinking Water and Municipal Assistance has been given authority for oversight of these regulations. DEQ regulatory oversight is mainly conducted through inspections, review of monitoring information (this includes sample results and operations data), issuance of construction permits for water systems, and planning (reliability, emergency response, capital improvement, operation and maintenance, etc.) As both community water systems and the DEQ desire the mutual goal of safe water, the DEQ works proactively in partnership with water systems to provide compliance assistance. This also includes activities such as source water protection and infrastructure funding.

2. What is the DEQ's response to the mayor's request for assistance?

As indicated by phone this letter was directed to the Governor's Office and should be followed up with that office for response at this point in time.

3. What on-going testing is DEQ doing with Flint water and how often?

The City is required to follow all state and federal monitoring requirements under Act 399. This includes sample analysis of over 90 contaminants with health based drinking water standards along with monitoring of its source, treatment, and distribution operations. Sample analysis frequency is based on the specific contaminant type, its level of detection if any, and its potential variability.

In regards to total coliform and e.coli bacteria compliance monitoring, the City is required to analyze at least 100 samples each monthly compliance period from its distribution system.

In regards to Total Trihalomethane (TTHM) compliance monitoring, the City is required to collect quarterly samples from 8 locations in its distribution system. The TTHM standard is based on a Running Annual Average for each of the 8 locations, rather than individual sample results. The location and timing of these samples is based on worst case conditions in the water system to identify the highest level of long term exposure.

4. So far, how many drinking water violations have occurred in Flint since the switch to Flint River water and what sanctions - if any - does the city face?

The City has had the following Maximum Contaminant Level (MCL) standard violations:
E.Coli Acute bacteria MCL violation, August 2014
Total Coliform bacteria MCL violation, September 2014
TTHM locational running annual average MCL violation, October-December quarter (2 of 8 sites)

There are generally two requirements in regards to the violations: Public Notification and corrective action
Public Notice for acute health threats like the e.coli MCL must be made within 24 hours of the violation.
Public Notice for non-acute health threats such as total coliform bacteria and TTHM must be made within 30 days of the violation.

Corrective action regarding bacteria detections generally involves taking steps to disinfect and repair the affected areas and sampling to obtain confirmation the bacteria source is has been addressed.

The City has remained in compliance with this standard for each of the monthly monitoring periods since September, including thus far in January

Corrective action for TTHM involves taking steps to reduce the amount of TTHM so that they are below the standard. The City is required to complete an Operational Evaluation report within 90 days of the violation. This report includes examination of treatment and distribution operational practices (source water quality, treatment changes, storage tank operations, excess storage capacity, distribution system flushing, treatment problems that contribute to TTHM formation. The City proactively completed an Operational Evaluation following sample results from August 2014, and is now completing another operational evaluation further evaluated based on information from the November monitoring. November monitoring showed individual sample results now below the standard at 7 of 8 locations. However, as noted compliance is determined based on a running annual average at each location.

5. What does DEQ tell Flint residents who call DEQ with concerns about discolored water?

Callers indicating discoloration or other aesthetic water quality issues are directed to contact the Flint DPW to allow the DPW staff to investigate the situation. Generally color, odor and taste are aesthetic water quality issues not related to any health based standards including total coliform bacteria, e.coli bacteria, and TTHM.

Treated water is monitored for color at the Water Treatment Plant as part of its operation, and has not been abnormal. The City of Flint has over 500 miles of distribution piping and conditions in some isolated sections of water main piping or private premise plumbing may cause changes to aesthetic conditions such as color, taste, or odor.

Those are my major questions. Could you please give me a call today?

Access to safe and clean water is a basic human right. And a citizen's right to safe drinking water should not be based on how much money you earn, the neighborhood you live in or if your local government is under the control of an emergency manager.

All citizens have a fundamental right to know that such a critical resource as their water supply is safe and accessible. But that is not happening in Flint at the moment.

That is why, on January 18th, I forwarded a request that Governor Snyder adopt my Flint Water Improvement Plan. My plan, focused on the areas of safety, quality, access, investment and education, starts by calling for 100 percent safety as the standard for water.

The plan calls for reporting of water testing to the public by city officials, an amnesty program to reduce fees for Flint water turn-ons, accelerated water system capital improvements and partnerships with community organizations to help with water payment assistance. I'm also reaching out to other state and elected officials for support.

The request comes as residents, as evidenced in a series of recent community meetings, continue to have concerns about the quality of Flint's water. Earlier in 2014, several boil-the-water advisories were issued by the city because of issues with bacteria found in water in some parts of Flint. Gov. Snyder's appointed emergency manager recently told customers that Flint was in violation of the Safe Drinking Water Act because of the high level of trihalomethane (TTHM) -- a byproduct of chlorination -- in drinking water samples last year.

A contradictory order from the city saying the water was safe but could present risks for infants, the elderly and those with compromised immune systems confused residents further and compounded the worries of Flint's vulnerable populations. Marry that with costly water rates that have threatened individuals' access and you have the crisis of concern and confidence swirling in Flint today.

Sadly, because Flint is under Michigan's controversial emergency manager system of governance, locally elected officials have been largely limited to serving as sounding boards to justifiably worried Flint residents.

This is unacceptable. Not only should Governor Snyder visit Flint in the midst of this ongoing crisis, but his administration should make it the priority that the community expects.

It's time for the Snyder administration to do what is best for the citizens of Flint---immediately. There is nothing more important in Flint right now than fixing the water problems.

This will take time and money so the sooner the new investments are made, the better.

Hi Ron,

You can attribute this to me.

Flint residents deserve clean, safe water. Flint Emergency Manager Jerry Ambrose, his management team and the state Department of Environmental Quality are working to ensure that. The state government will be a resource where and when possible, as it has been for other important issues affecting the city.

Hi, Dave,
I am working on a deadline story about Flint's drinking water. My story will focus on state involvement and state policy.

My major questions:
1. What is the governor's response to the letter Mayor Walling sent last week asking for assistance?
2. What other state agencies - if any - can help residents (especially the poor) who are asking for help filtering water or getting higher quality water?
3. Essentially - with some residents complaining about the water quality - what the can the state do to help?

Could you please give me a comment/call today?

Hey Dave,

Wondering if Governor Snyder has responded to Flint mayor Dayne Walling's letter regarding Flint's water problems. Will the governor visit Flint or meet with local leaders to talk about the issues going on with the water in the city.

Hoping to hear from you soon,
Walter

STATE OF MICHIGAN
DEPARTMENT OF ENVIRONMENTAL QUALITY
LANSING DISTRICT OFFICE

RICK SNYDER
GOVERNOR

DAN WYANT
DIRECTOR

December 15, 2014

Mr. Brent Wright, Operation Supervisor
City Of Flint - DPW
Flint Water Plant
4500 North Dort Highway
Flint, MI 48505

WSSN: 02310

Dear Mr. Wright:

SUBJECT: Violation Notice – Maximum Contaminant Level for Total Trihalomethanes
Operational Evaluation – Total Trihalomethanes
4th Quarter 2014 Monitoring Period

The Department of Environmental Quality (DEQ), Office of Drinking Water and Municipal Assistance (ODWMA), records show that the City of Flint is in violation of the Safe Drinking Water Act,1976 PA 399, as amended (Act 399); R 325.10610*, Maximum contaminant levels* (MCL) *for disinfection byproducts*, of the 1979 Administrative Code.

In accordance with R.325.10610, *MCLs for disinfection byproducts*, of the 1979 Administrative Code, the MCL for disinfection byproduct total trihalomethanes (TTHM) is 0.080 milligrams per liter (mg/L) as a Locational Running Annual Average (LRAA) at each monitoring location. As listed in the table below, our records show that the City of Flint's highest TTHM locational running annual average (LRAA), based on the last three quarters, ending November 30, 2014, is 0.099 mg/l which exceeds the standard, and that two of the eight sample site locations exceed the standard of 0.080 mg/L.

Further, in accordance with R325.10719l, *Disinfection byproducts: operational evaluation levels*, of the 1979 Administrative Code, when an operational evaluation level (OEL) at a monitoring location for TTHM exceeds 0.080 mg/L, a supply shall conduct an operational evaluation and submit a written report of the evaluation to the department not later than 90 days after being notified of the analytical result that causes the supply to exceed the operational evaluation level. As listed in the table below, our records show that TTHM operational evaluation levels for the City of Flint exceed 0.080 mg/L at four of the City's eight sample site locations.

TTHM Results (mg/L)					
	5/21/14	8/21/14	11/20/14	LRAA	OEL
DBP1 McDonalds 3719 Davison	**0.162**	**0.145**	0.059	**0.092**	**0.106**
DBP2 Liquor Palace 3302 S. Dort Highway	**0.112**	**0.127**	0.033	0.068	0.076
DBP3 North Flint Auto 6204 N. Saginaw St.	**0.097**	**0.118**	0.041	0.064	0.074
DBP4 University Market 2501 Flushing Road	**0.106**	**0.196**	**0.094**	**0.099**	**0.122**
DBP5 Taco Bell 3606 Corunna Road	0.079	**0.181**	0.034	0.074	**0.082**
DBP6 Rite-Aid Pharmacy 5018 Clio Road	**0.088**	**0.144**	0.054	0.072	**0.085**
DBP7 Salem Housing 3216 MLK Boulevard	**0.082**	**0.112**	0.050	0.061	0.074
DBP8 BP Gas Station 822 S. Dort Highway	0.075	**0.112**	0.036	0.056	0.065

Our investigation consisted of a review of ODWMA files for laboratory reports received for compliance monitoring. Our investigation is considered complete. This violation began on December 1, 2014, and will continue until TTHM LRAA is below the MCL at all sample sites.

We acknowledge and appreciate the city's cooperation with our recommendation to preemptively conduct an Operational Evaluation following the City's second quarterly round of monitoring in August. That Operational Evaluation report has identified possible causes and corrective measures for the elevated TTHM levels which we encourage the City continue implementing. These modifications have likely contributed in part to the reduction in TTHM levels reported in the most recent quarter, and suggest the City may be able to achieve compliance with the TTHM standard.

Our office is continuing to review the Operational Evaluation report that was submitted on December 1, 2014, and will provide the City and their consultant comments as needed to help address this MCL violation.

Water systems that exceed the OEL must complete and submit an Operational Evaluation in accordance with Administrative Rule 719l (R325.10719l) within 90 days of being notified of the violation. **An updated Operational Evaluation report, which incorporates the most recent sample results, must now be completed and received by our office by no later than March 1, 2015**.

If you have any other factual information you would like us to consider regarding the violation identified in this Violation Notice (VN), please provide them in a written response by January 15, 2015.

Administrative rule R 325.10403 of Act 399 requires that suppliers provide public notice (PN) as soon as practical, but no later than thirty (30) days after the supplier learns of this type of violation, by mail or direct delivery **and** by any other means reasonably calculated to reach customers not normally reached by mail. Enclosed is a sample PN which contains the minimum required language. The City is encouraged to include

additional information regarding its response to this violation. **Please notify your consumers by January 10, 2015, and send us a signed and dated copy of the notice that you issued within ten (10) days of distributing the public notice**. This violation must also be included in your 2014 Consumer Confidence Report (CCR), due by July 1, 2015. The PN must be repeated every quarter until you no longer exceed the TTHM standard. Failure to issue a PN for this violation will result in a fine of at least $1,000 per event, with a maximum of $5,000 per violation.

We anticipate and appreciate your continued cooperation in resolving this matter. If you have any questions regarding this VN, please contact us at the numbers below.

Sincerely,

Michael F. Prysby, P.E., District Engineer

IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER

City of Flint Did Not Meet Treatment Requirements

Our water system recently violated a drinking water standard. Although this incident was not an emergency, as our customers, you have a right to know what happened and what we are doing to correct this situation.

We routinely monitor for the presence of drinking water contaminants. Samples were collected for total trihalomethanes (TTHM) analysis from eight locations on a quarterly basis (May 21, August 21, and November 20 of 2014). The average of the results at **ANY** of the eight locations must not exceed the maximum contaminant level (MCL) for TTHMs, otherwise our water system exceeds the Maximum Contaminant Level (MCL). The standard for TTHMs is 80 µg/L. The location reporting the highest TTHM level was 99 ug/L; thus, our water system exceeds the TTHM MCL.

What should I do?

- There is nothing you need to do unless you have a severely compromised immune system, have an infant, or are elderly. These people may be at increased risk and should seek advice about drinking water from their health care providers.

- You do not need to boil your water or take other corrective actions. If a situation arises where the water is no longer safe to drink, you will be notified within 24 hours.

What does this mean?

This is not an emergency. If it had been an emergency, you would have been notified within 24 hours.

People who drink water containing trihalomethanes in excess of the MCL over many years may experience problems with their liver, kidneys, or central nervous system, and may have an increased risk of getting cancer.

What is being done?

We are currently working on solutions to correct the problem. We anticipate resolving the problem by 2015.

For more information, please contact Mr. Brent Wright at 517-787-6537 or the Flint Water Plant at 4500 North Dort Highway, Flint, MI 48505.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

This notice is being sent to you by the City of Flint.

CERTIFICATION: WSSN: 02310

I certify that this water supply has fully complied with the public notification requirements in the Michigan Safe Drinking Water Act, 1976 PA 399, as amended, and the administrative rules.

Signature	Title	Date Distributed

Reminder to water supplier: This notice / certification must be sent to the DEQ.

Subject: DEQ Flint Backgrounder / talking points

Terry, all good and thanks for working these up. Been rebriefed by our staff, so let me throw in some things that are pertinent from that point.

Following the formal approval of Flint into the KWA, DWSD sent Flint a letter saying their contract was thereby terminated (early 2013).
According to our folks, Genesee County has been using DWSD water without a contract since May 2014. But Flint took the letter to imply a water cutoff, and promptly turned to DEQ with a proposal to use the Flint River (their historic backup system).

This proposed shift put the city in the business of water production, where they historically had been in the business of water transmission. DEQ approved the use of the river as a source, based on the treatment plant's past performance as a standby facility and the improvements needed prior to switchover. Several municipalities around the state use surface water supplies (rivers): Blissfield near Monroe, Manistique, and Alma to name a few.

The city completed the upgrades at the water plant the facility and DEQ approved it April 2014.

There were some initial hiccups. Last summer, there were a couple of 'boil water' notices issued. One for a water test that showed e. coli, one for a break in the water main.

The challenge to using the Flint River as a source is that the condition of the water is variable and changes with season and weather. It has substantially more organic matter than deep lake sources like Lake Huron. This organic matter is mobilized by high water events, and warm weather also can account for more organic material in the water.

The treatment of the organic matter is done with chlorine. One might conclude that the perennial answer is just to use more chlorine to achieve water safety. However, at some point on the continuum, the chlorine and organic matter create TTHM – total trihalomethanes – as a byproduct. When the standard for those is exceeded over several consecutive quarters of testing, the supply is required by law to issue public notice and submit an approved plan for addressing the situation.

You'll note that this regulatory approach means TTHM testing is done quarterly. That means people who use the system are exposed to TTHM for several months before the public notice is required. It's because TTHM is a chronic health threat. Over the long term (measured in decades), continued exposure can contribute to some known health problems. Put in context, the EPA (who established the standard and the rule) estimates this rule prevents an estimated 280 bladder cancer cases each year … out of more than 330 million people who use public water supplies around the country.

It's not nothing. State and federal law requires quarterly testing for TTHM and that the public be informed of it when the annual average of four quarters' worth of consecutive testing shows TTHM levels exceeding 80 parts per billion. Flint's results managed to exceed the annual average in three quarters, and they must develop a plan to address it. But it's not like an eminent threat to public health. Unlike an e. Coli or even total coliform bacteria maximum contaminant level, which require immediate public notification and response and are part of daily / hourly testing of public water supplies, TTHMs pose a public health concern with chronic, long-term exposure.

It's clear the nature of the threat was communicated poorly. It's also clear that folks in Flint are concerned about other aspects of their water – taste, smell and color being among the top complaints.

The Safe Drinking Water Act requires public water supplies be tested for more than 90 regulated contaminants, including microbial contaminants. The act, and the program here in Michigan, work to ensure that water is safe to drink. The act does not regulate aesthetic values of water. Here are some factors affecting the aesthetics of water in Flint.

1. It's the Flint River. The water supplied by DWSD historically came from Lake Huron. It's softer. With hard water, you get a different flavor and feel. It's why General Motors suspended use of Flint Water – it was rusting their parts. Also, there's the 'organics' factor (discussed previously).

2. The system is old. Flint has more than 500 miles of water pipes. More than half of those pipe miles are more than 75 years old. Much of it is cast iron. Hard water can react with cast iron and exacerbates the rusty factor, which creates that brown water that angry residents were holding up in jugs for the media cameras last week. Valve failure has also been a key challenge. The system has an estimated 7,500+ valves. When they stick open or stick shut, it affects the hydraulics of the system and increase areas of stagnation. The city has a backlog of valves that need to be addressed. They've done half a dozen or so since November.

3. Flint is old. Many of the homes served by the system are old. Brown water complaints may also be attributable to cast iron pipes in customers' service

connection to the city lines. The DEQ has been encouraging people with water coloration concerns to contact the city and see whether it is the service line or the City's line causing the issue. Again, discoloration is not an indicator of water quality or water safety, but we recognize that nobody likes it.

In summary, the City of Flint has tremendous need to address its water delivery system. We are not aware that they have any Capital Improvement funds for preventative maintenance in place, much less line replacement project monies that will require hundreds of millions. The City was approved for a Revolving Fund loan in 2008 or 2009. As a Distressed Community, they qualified for flexible terms and 2 percent interest rate Revolving Fund Loan. After they were notified they were approved for the loan, they declined it. Previous SRF loans from the state to Flint bear an outstanding balance of $20.7 million today.

The DEQ continues working with the city to address the TTHM issue. They can take interim steps – from scrubbing the insides of transmission lines to carefully monitoring the hydraulic challenges in their system – to address customers' aesthetic concerns. Their TTHM numbers already are showing dramatic improvement; the November testing showed only one of seven sample points exceeding the standard. The key now is that the standard is an average of three quarters' worth of results. It will be some time before they are officially "not in violation." However, depending on weather in 2015, it's not unforeseeable that we will be having this conversation again by next Christmas.

The key to the conversation is that TTHM is not a top health concern. That's key because residents need to understand TTHM in context, and it is key because it appears the mayor has seized on the public panic (sparked, frankly, by their poor communication of the violation notice) to ask the state for loan forgiveness and more money for their infrastructure improvement.

Another key thing to remember is that once the city connects to the new KWA system in 2016, this issue will fade in the rearview.

Until then, our top messages:

1. The DEQ Drinking Water program works with communities around the state to ensure that municipalities provide customers with clean, safe drinking water.
2. Municipal water supplies are tested rigorously and regularly for more than 90 regulated contaminants, including microbial contaminants that pose an immediate public health concern.
3. Flint's exceedance of the TTHM standard should reassure residents that the testing program is effective.
4. TTHM is not an immediate health threat. It is a chronic concern, one that can be problematic over the course of several decades of exposure. The public was

notified because the law requires the city to make public notification, so that everyone can make informed decisions. This is particularly true for people with infants or those with compromised immune systems.

5. The DEQ is working with the City to address the situation. Recent tests show the TTHM numbers dropping rapidly. The department will continue working with the city in the months ahead, and residents should feel confident that their water is safe to drink unless the DEQ or City notifies them otherwise.
6. The discoloration and odor issues some Flint residents are experiencing are separate issues from the TTHM issue. TTHM is odorless, colorless and measured in parts per billion.
7. Flint water customers who have questions or concerns about their water should first contact the city to get answers and help. They also can contact the Michigan DEQ at ********** (web or phone address?)

Hi Angela,

When you get a moment, I can fill you in about an event involving the boss regarding Flint water. He was part of a meeting this morning. Me, you and Brad might be whipping something up.

Not bad, I promise.

Subject: Flint water piece.

In case you guys missed Chastity Pratt's piece today in Bridge…
http://bridgemi.com/2015/01/cringe-over-troubled-water-flints-smelly-dilemma/

I've drafted this response. Would like to send it to her yet today. Would like to make sure it doesn't cause any of us undue heartburn. Please review and call me? Thanks!
b

Hi, Chastity. Apologies we did not get to connect as you were preparing your story on Flint water. I understand DEQ staff were able to provide some data.
Overall, well done from a factual perspective. If you decide to revisit the issue, keep me in mind. I'd much like to offer some broader DEQ perspective on our drinking water program and this situation in particular. Some key pieces that folks should know include these:

1. The decision to leave Detroit as a water supplier and use the Flint River was developed and pushed by Flint's local elected officials – over the concerns of state officials. Ultimately, the state signed off on the project (as required because of the EFM) – but consider that Genesee County still gets water from Detroit today, without a contract. This switch wasn't mandated by Detroit, or the state, or anyone but the leadership in Flint, and was proposed as a money saver until the KWA system comes online.

2. The idea that the state owns Flint's water woes outright because of the presence of an EFM ignores that much of this problem is the result of decades of the city failing to perform upkeep on their system. Someone might even argue that the absence of a maintenance fund for infrastructure is just one more symptom of a broader problem that resulted in an EFM assigned to keep the city from financial crash. It's worth noting that the city was approved for a DEQ revolving fund loan in 2009, and DEQ sent a letter congratulating them, only to have the city decline the funding. Seen in that light, the city's proposed solution of state forgiveness on the $20.7 million it presently owes to the State Revolving Fund and an infusion of new, no-strings money for maintenance and line repairs looks, arguably, different.

3. The heart of the problem isn't just because Flint's leaders decided to use the Flint River as a source. It's true that the river water varies in quality, and requires a flexible treatment strategy to address seasonal fluctuations, but the water aesthetics concerning residents in Flint are

compounded by the fact that the system is old and has not been kept up. Flint's water system consists of more than 500 miles of pipes, and more than half of those pipe miles are more than 75 years old. Much of it is cast iron (hence the color issues). The hardness of the water from the river certainly appears to be exacerbating the (rusting) discoloration. It's why GM pulled off Flint's water.

4. The Safe Drinking Water Act, and Michigan's drinking water program, regularly and rigorously reviews municipal water supplies for more than 90 different toxins, including microbial ones. The objective is comprehensive screening that keeps water quality up and mandatory reporting to help customers make informed health decisions when there's an issue, whether that's an immediate health threat (like e. coli or total coliform) or a long-term potential threat like TTHM. But it is the Safe Drinking Water Act, not the Clear Drinking Water Act. The program does not regulate water for aesthetics like color or smell.

5. We empathize with Flint residents who are unhappy with their water. They pay a lot for it, and in some cases it is not the clear, tasteless product one might anticipate. But our goal at DEQ is to make sure the system operators are testing the water according to state and federal law, and that it meets safety standards. Recent testing indicates that the TTHM levels are dropping rapidly, and we will continue to work with the city to protect water customers in the days, months and years ahead.

Thanks,
b

Subject: Rep Neeley's Release

Sara –

Just wanted to give you a heads up that Rep Neeley sent a letter to the Gov and asked that I send out the following press release re the water situation in Flint.

FOR IMMEDIATE RELEASE
Friday, Jan. 30, 2015

Contact: Rep. Sheldon Neeley
Phone: (517) 373-8808

Neeley Sends Letter to Governor Concerning Flint Water Crisis

Legislator asks Gov. Snyder to consider plans to fix water system

LANSING – State Representative **Sheldon Neeley** (D-Flint) has sent a letter to Gov. Rick Snyder, as well as his chief of staff, Dennis Muchmore, and his senior advisor, Dick Posthumus, to inform them of the current crisis affecting the city of Flint's water supply. Residents have spoken out about the quality of the water, calling it unsafe to drink. Photos taken by residents and Flint media have shown

the water to be brownish in color, with sediment and other foreign bodies floating in it.

"In light of the rising and continuous concerns in the Flint community, it is imperative that the governor explores all options in his power to come to the aid of the community," Neeley said.

In the letter, Rep. Neeley asks for an executive decision by the governor to forgive Flint's water fund loan balance of nearly $20.8 million so that those funds may be used to help the city rebuild the infrastructure as well as provide a cost-effective water delivery system.

With this loan forgiveness, Rep. Neeley explains the city will be able to upgrade wastewater treatment processes, improve safe drinking water upgrades and maintain a water system that provides better water to the citizens of Flint.

"The people of Flint elected me to serve them first, and when I see my constituents on the verge of civil unrest, I must act swiftly and with passion," Neeley said. "I am hopeful this letter will bring the concerns of Flint to Gov. Snyder, and that will in turn open a dialogue about what can be done to help the community I love so much."

Here's my backgrounder on Flint. Share as appropriate. Key messages at the end.
b

DEQ BACKGROUNDER: FLINT WATER

Following the formal approval of Flint into the KWA in 2012, DWSD sent Flint a letter saying their contract was thereby terminated (by early 2013).

Genesee County has been using DWSD water without a contract since May 2014. But Flint took the letter to imply a water cutoff, and promptly turned to DEQ with a proposal to use the Flint River (their historic backup system).

This proposed shift was pitched primarily as a money saver. But it put the city in the business of water production, where they historically had been in the business of water transmission. DEQ approved the use of the river as a source, based on the treatment plant's past performance as a standby facility and the improvements we outlined prior to a switchover.

Several municipalities around the state use surface water supplies (rivers): Blissfield near Monroe, Manistique, and Alma to name a few.

The city completed the upgrades at the water plant the facility and DEQ approved it April 2014.

There were some initial hiccups. Last summer, there were a couple of 'boil water' notices issued. One for a water test that showed e. coli, one for a break in the water main.

The challenge to using the Flint River as a source is that the condition of the water is variable and changes with season and weather. It has substantially more organic matter than deep lake sources like Lake Huron. This organic matter is mobilized by high water events, and warm weather also can account for more organic material in the water.

The treatment of the organic matter is done with chlorine. One might conclude that the continual answer is just to use more chlorine to achieve water safety. However, at some point on the continuum, the chlorine and organic matter create TTHM – total trihalomethanes – as a byproduct. When the standard for those is exceeded over several consecutive quarters of testing, the supply is required by law to issue public notice and submit an approved plan for addressing the situation.

You'll note that this regulatory approach means TTHM testing is done quarterly. That means people who use the system are exposed to TTHM for several months before the public notice is required. It's because TTHM is a chronic health threat. Over the long term (measured in decades), continued exposure can contribute to some known health problems. If this were an immediate health

threat, customers would receive immediate notification to boil their water or not use it.

Put in context, the EPA (who established the standard and the rule) estimates the existence of the TTHM standard prevents an estimated 280 bladder cancer cases each year … out of more than 330 million people who use public water supplies around the country.

It's not "nothing." State and federal law requires quarterly testing for TTHM and that the public be informed of it when the annual average of four quarters' worth of consecutive testing shows TTHM levels exceeding 80 parts per billion. Flint's results managed to exceed the annual average in three quarters, and they must develop a plan to address it.

But it's not like an eminent threat to public health. Unlike an e. Coli or even total coliform bacteria maximum contaminant level, which require immediate public notification and response and are part of daily / hourly testing of public water supplies, TTHMs pose a public health concern with chronic, long-term exposure.

It's clear the nature of the threat was communicated poorly. It's also clear that folks in Flint are concerned about other aspects of their water – taste, smell and color being among the top complaints.

The Safe Drinking Water Act requires public water supplies be tested for more than 90 regulated contaminants, including microbial contaminants. The act, and the program here in Michigan, work to ensure that water is safe to drink. The act does not regulate aesthetic values of water. Here are some factors affecting the aesthetics of water in Flint.

1. It's the Flint River. The water supplied by DWSD historically came from Lake Huron. It's softer. With hard water, you get a different flavor and feel. It's why General Motors suspended use of Flint Water – it was rusting their parts. Also, there's the 'organics' factor (discussed previously).

2. The system is old. Flint has more than 500 miles of water pipes. More than half of those pipe miles are more than 75 years old. Much of it is cast iron. Hard water can react with cast iron and exacerbates the rusty factor, which creates that brown water that angry residents were holding up in jugs for the media cameras last week. Valve failure has also been a key challenge. The system has an estimated 7,500+ valves. When they stick open or stick shut, it affects the hydraulics of the system and increase areas of stagnation. The city has a backlog of valves that need to be addressed. They've done half a dozen or so since November.

3. Flint is old. Many of the homes served by the system are old. Brown water complaints may also be attributable to cast iron pipes in customers' service connection to the city lines. The DEQ has been encouraging people with water coloration concerns to contact the city and see whether it is the service line or the City's line causing the issue. Again, discoloration is not an indicator of water quality or water safety, but we recognize that nobody likes it.

In summary, the City of Flint has tremendous need to address its water delivery system. We are not aware that they have any Capital Improvement funds for preventative maintenance in place, much less line replacement project monies that will require hundreds of millions.

The City was approved for a Revolving Fund loan in 2008 or 2009. As a Distressed Community, they qualified for flexible terms and 2 percent interest rate Revolving Fund Loan. After they were notified they were approved for the loan, they declined it. Previous SRF loans from the state to Flint bear an outstanding balance of $20.7 million today.

The DEQ continues working with the city to address the TTHM issue. They can take interim steps – from scrubbing the insides of transmission lines to carefully monitoring the hydraulic challenges in their system – to address customers' aesthetic concerns. Their TTHM numbers already are showing dramatic improvement; the November testing showed only one of seven sample points exceeding the standard.

The key now is that the standard is an average of three quarters' worth of results. It will be some time before they are officially "not in violation." However, depending on weather in 2015, it's not unforeseeable that we will be having this conversation again by next Christmas.

The key to the conversation is that TTHM is not a top health concern. That's key because residents need to understand TTHM in context, and it is key because it appears the mayor has seized on the public panic (sparked, frankly, by their poor communication of the violation notice) to ask the state for loan forgiveness and more money for their infrastructure improvement.

Another key thing to remember is that once the city connects to the new KWA system in 2016, this issue will fade in the rearview.

Key messages:

1. The DEQ Drinking Water program works with communities around the state to ensure that municipalities provide customers with clean, safe drinking water.

2. Municipal water supplies are tested rigorously and regularly for more than 90 regulated contaminants, including microbial contaminants that pose an immediate public health concern.
3. Flint's exceedance of the TTHM standard should reassure residents that the testing program is effective.
4. TTHM is not an immediate health threat. It is a chronic concern, one that can be problematic over the course of several decades of exposure. The public was notified because the law requires the city to make public notification, so that everyone can make informed decisions. This is particularly true for people with infants or those with compromised immune systems.
5. The DEQ is working with the City to address the situation. Recent tests show the TTHM numbers dropping rapidly. The department will continue working with the city in the months ahead, and residents should feel confident that their water is safe to drink unless the DEQ or City notifies them otherwise.
6. The discoloration and odor issues some Flint residents are experiencing are separate issues from the TTHM issue. TTHM is odorless, colorless and measured in parts per billion.
7. Flint water customers who have questions or concerns about their water should first contact the city to get answers and help. They also can contact the Michigan DEQ.

Cc: Posthumus, Dick (GOV); Wurfel, Brad (DEQ); Hollins, Harvey (GOV)
Subject: Flint FDCVT Project Summaries

Importance: High

All..see below. As noted on the 1:30 conf call, both are "related" to water.

Flint Incinerator

The grant project entails shutting down the current Water Pollution Control Facility Incinerator (due to the incinerator not being up to new EPA standards). In order to meet EPA standards, it would cost roughly $8.8M in upgrades to the current incinerator. The grant funding will allow them to replace the functions of the old incinerator by constructing new facilities which will allow for the disposal of waste to landfills.

Budget Breakdown

Construction Contractor	$1,050,000
Project Management	$50,000
Total	$1,100,000

Flint Leak Detection

The grant project will allow the city to hire a contractor to perform a leak detection survey of the city water lines. The city will receive a map of leak locations and an assessment of leak severity. This data will allow the city to prioritize leak repair. The project also covers the expense of conducting a water pipe line wall thickness condition assessment on a portion of the city's pipes. The assessment will guide the city's water main replacement program.

Budget Breakdown

Project Planning	$90,000
Mobilization of Crew to Site	$27,000
Leak Detection < 16" diameter	$378,000
Leak Detection 16" diameter or >	$270,000
Pipe Condition Assessments	$135,000
Total	$900,000

Subject: Backgrounder on Tuesday Flint water event

Team,

Here is background on the planned Tuesday event in Flint regarding the $2 million Distressed Cities grant and other issues connected to the water issue.

There are plans for two press releases on Tuesday. The first will detail the two Flint grants and will be released by the governor's communications office. The other release, which would detail the other grants, would follow from Treasury with a quote from the governor.

Mayor Walling has agreed to speak at the event, with Harvey Hollins and Dan Wyant representing the governor's office. Sen. Ananich has asked to speak, and it has been suggested that Rep. Neeley would speak and it might be better to add him to the program. Others, such as Deputy Director Workman and Emergency Manager Ambrose, would be present and available.

The attached document includes details about the planned event, as well as background on the grants from Treasury and on the entire water issue from DEQ as well as Mayor Walling's Facebook post about the governor and links to the stories in the media about the issue.

We have a room reserved and are working with the communications team in Flint to have microphones and other items needed for the event.

Please let me know if there is any information you think should also be included, or anything that should be changed. Once everyone has had the opportunity to review, we can forward to the governor.

Thank you, everyone, for your assistance. I know there are lots of moving pieces and many people involved.

Dave & Sara...

Please see the attached draft. I am sending to my ORTA staff so they can double check the unit names and amounts.

Let me know if you need anything else before Monday morning.

Also, as you (Sara) may know...I spoke with Brad and we will be meeting with Dick, my leg. Liaison (Paul Connors) and Evah Cole from ORTA (Grants) and Rep Neely Monday at 11. Wish us luck ;)

draft

Snyder announces grants for distressed municipalities

$8 million will address water, public safety, and appraisal issues

Gov. Rick Snyder today announced that $8 million in funding, through the Financially Distressed Cities, Villages, and Townships Grant Program will be awarded to six local units of government in Michigan. Funding will help municipalities fund various improvement projects, including water system and street lighting enhancements, as well as technology upgrades. Municipalities had to be experiencing one or more conditions indicative of "probable financial stress," as defined by Public Act 436 of 2012, the Local Financial Stability and Choice Act, to qualify for a grant.

"Municipalities receiving this special funding are some of the areas around Michigan hardest hit by the Great Recession," Gov. Snyder said. "I am pleased we can offer funding assistance to help these local governments improve various public services their taxpayers and residents expect and deserve."

Under the grant program, funding may be used to pay for specific projects, services, or strategies that move a city, village, or township toward financial stability. $8 million was appropriated for the program with a $2 million cap, per local unit.

The following communities will receive funding through the Financially Distressed Cities, Villages, and Townships Grant Program in fiscal year 2015 with projects and amounts noted (alphabetical order):

Local Unit	Project Description	Amount
City of Benton Harbor	Complete a property reappraisal to provide updated and accurate assessing records. Additionally, community enhancement through blight management and sidewalk replacement.	$475,000
City of Benton Harbor	Water system enhancement through water main replacements and fire hydrant repairs.	$434,960
City of Ecorse	Public safety enhancement through improved street lighting.	$350,000
City of Flint	Water system enhancement through improved waste management.	$1,100,000
City of Flint	Water system enhancement through leak detection and pipe assessments.	$900,000

City of Hamtramck	Complete a property reappraisal to provide updated and accurate assessing records.	$167,860
City of Hamtramck	Upgrade City Hall security.	$50,000
City of Hamtramck	Public safety enhancement through improved street lighting.	$404,600
City of Highland Park	Water system enhancement through meter replacement, leak detection, and system repairs.	$2,000,000
City of Inkster	Complete a property reappraisal to provide updated and accurate assessing records.	$73,460
City of Inkster	Water system enhancement through fire hydrant repairs.	$150,000
City of Inkster	Provide a backup power source for public safety.	$30,000
City of Inkster	Public safety enhancement through the creation of a multi-jurisdictional narcotic team.	$240,000
City of Inkster	Public safety enhancement through police officer training.	$41,970
City of Inkster	Public safety enhancement through the deployment of an additional police officer.	$320,000
City of Lincoln Park	Public safety enhancement through updated technology.	$143,490
City of Melvindale	Public safety enhancement through fleet replacement of police vehicles and updated technology.	$88,000
City of Pontiac	Community enhancement through blight management.	$125,000
City of River Rouge	Public safety enhancement through improved street lighting. Additionally, infrastructure replacements to City Hall.	$591,508
Royal Oak Township	Public safety enhancement through improved street lighting	$86,559
Royal Oak Township	Public safety enhancement of police services.	$217,593

Applications for the next round of Financially Distressed Cities, Villages, and Townships Grant Program will be available on the Department of Treasury website this spring. Applications must be submitted to Treasury by the close of business on XXX, XXX 31, 2015.

Preference is generally given to applicants from local units in which:

- A financial emergency has been declared in the past five years;
- An approved Deficit Elimination Plan for the General Fund is currently in place; or,
- Two or more conditions indicating "probable financial distress" currently exist.

For more information about FDCVT grants, including an application for cities, villages, and townships, visit www.michigan.gov/revenuesharing.

####

*Conditions of "probable financial distress" relating solely to school districts are not included as conditions for FDCVT, as school districts are not eligible.

I've attached the backgrounder and the draft releases from Governor's Communications and Treasury. I've sent a message to the mayor's office about a quote, but have not heard back yet.

Brad and I spoke about Director Wyant's role and potential comments. He will point out that there are things the state can do to help monitor the situation, but also will note that the city's water infrastructure is aging, which contributes to the problems.

We need some direction on an advisory. Should this be listed on a typical advisory from the governor's office, or come from Treasury? Do we even issue an advisory in favor of just contacting media directly in the morning?

Please give the draft releases a read for potential changes, or let me know of other concerns.

Thank you!

Subject: RE: Media advisory about Flint event this afternoon

Dave-

Thanks. I will see what I can do to make it over there. Have taken on some new responsibilities here at work and that might have me tied up.

If I can't, any chance for an interview with the Governor (or treasury official) tomorrow? I could pre-record something early in the morning or we could do something during my show?

Again, thanks!

Jason, wanted to give you a heads-up.

Representatives from the Michigan Department of Treasury, the Office of Urban Initiatives and the Department of Environmental Quality will be joined by several state lawmakers and city leaders at 3 p.m. today at the Haskell Community Center, 2201 Forest Hill Avenue in Flint for a short press conference to discuss some state resources to be used for water system infrastructure and other improvements.

Let me know if you have any questions.

I left a message with Dick Posthumus to see if he has any concerns about proceeding.

The Senate Democrats said Sen. Ananich will want to appear. Katie Carey from the House said she would forward information to Rep. Neeley and Phelps. I have not heard back from her yet.

I've attached the backgrounder and the draft releases from Governor's Communications and Treasury. I've sent a message to the mayor's office about a quote, but have not heard back yet.

Brad and I spoke about Director Wyant's role and potential comments. He will point out that there are things the state can do to help monitor the situation, but also will note that the city's water infrastructure is aging, which contributes to the problems.

We need some direction on an advisory. Should this be listed on a typical advisory from the governor's office, or come from Treasury? Do we even issue an advisory in favor of just contacting media directly in the morning?

Please give the draft releases a read for potential changes, or let me know of other concerns.

Thank you!

Gov. Rick Snyder awards Flint $2 million in Distressed Municipalities ~~Cities~~ grants for water system infrastructure improvements

Funding to be used for leak detection, waste incinerator replacement

LANSING, Mich. – Gov. Rick Snyder today awarded Flint $2 million in grants for water system infrastructure improvements, part of an overall $8 million plan to help municipalities ~~cities~~ through the Financially Distressed Cities, Villages, and Townships Grant Program.

Flint is among eleven ~~six~~ municipalities receiving grants through the program. The city will use the funding to detect leaks in its water lines and replace its Water Pollution Control Facility Incinerator.

"There are opportunities for ~~the~~ state government to assist Flint city leaders as they address issues related to the city's water system," Snyder said. "These grants will help recovering cities improve public services and infrastructure, improving the quality of life for all residents."

The grants to Flint were announced today at the Haskell Community Center by Harvey Hollins, D~~d~~irector of the state's Office of Urban Initiatives, and Wayne Workman, the state's D~~d~~eputy T~~t~~reasurer. They were joined by Dan Wyant, D~~d~~irector of the Michigan Department of Environmental Quality, Flint Emergency Manager Jerry Ambrose, Mayor Dayne Walling, S~~s~~tate Senate Minority Leader Jim Ananich, S~~s~~tate Reps. Sheldon Neeley and Phil Phelps.

Flint was awarded $900,000 to allow the city to hire a contractor to perform a leak detection survey of the city water lines. The city will receive a map of leak locations and an assessment of leak severity, allowing the city to prioritize leak repair. The project also covers the expense of conducting a water pipe line wall thickness condition assessment on a portion of the city's pipes. The assessment will guide the city's water main replacement program.

The city also was awarded $1.1 million to shut down its current Water Pollution Control Facility incinerator and replace it with new facilities which will allow for the disposal of

waste in landfills. The existing facilities are not up to federal Environmental Protection Agency standards.

We suggest moving the two paragraphs below up under the first paragraph

Municipalities are eligible for the grants if ~~of~~ they are experiencing one or more conditions indicative of "probable financial stress," as defined by Public Act 436 of 2012, the Local Financial Stability and Choice Act.

Under the grant program, funding may be used to pay for specific projects, services, or strategies that move a city, village, or township toward financial stability. There was $8 million appropriated for the program with a $2 million cap, per local unit.

Gov. Rick Snyder announces grants helping distressed municipalities with water, public safety, appraisal issues

$8 million awarded for projects aimed at improving services, quality of life

LANSING, Mich. -- Gov. Rick Snyder today awarded $8 million to eleven ~~six~~ municipalities to fund various improvement projects, including water system and street lighting enhancements and technology upgrades through the Financially Distressed Cities, Villages, and Townships Grant Program.

Municipalities are eligible for the grants if ~~of~~ they are experiencing one or more conditions indicative of "probable financial stress," as defined by Public Act 436 of 2012, the Local Financial Stability and Choice Act.

"Municipalities receiving this special funding are some of the areas hardest hit by the Great Recession," Snyder said. "I am pleased we can offer funding assistance to help these local governments improve various public services their taxpayers and residents expect and deserve."

Under the grant program, funding may be used to pay for specific projects, services, or strategies that move a city, village, or township toward financial stability. There was $8 million appropriated for the program with a $2 million cap, per local unit.

The following communities will receive funding this year, with projects and amounts noted (alphabetical order):

Local Unit	Project Description	Amount
City of Benton Harbor	Complete a property reappraisal to provide updated and accurate assessing records. Additionally, community enhancement through blight management and sidewalk replacement.	$475,000
City of Benton Harbor	Water system enhancement through water main replacements and fire hydrant repairs.	$434,960
City of Ecorse	Public safety enhancement through improved street lighting.	$350,000
City of Flint	Water system enhancement through improved waste management.	$1,100,000

City of Flint	Water system enhancement through leak detection and pipe assessments.	$900,000
City of Hamtramck	Complete a property reappraisal to provide updated and accurate assessing records.	$167,860
City of Hamtramck	Upgrade City Hall security.	$50,000
City of Hamtramck	Public safety enhancement through improved street lighting.	$404,600
City of Highland Park	Water system enhancement through meter replacement, leak detection, and system repairs.	$2,000,000
City of Inkster	Complete a property reappraisal to provide updated and accurate assessing records.	$73,460
City of Inkster	Water system enhancement through fire hydrant repairs.	$150,000
City of Inkster	Provide a backup power source for public safety.	$30,000
City of Inkster	Public safety enhancement through the creation of a multi-jurisdictional narcotic team.	$240,000
City of Inkster	Public safety enhancement through police officer training.	$41,970
City of Inkster	Public safety enhancement through the deployment of an additional police officer.	$320,000
City of Lincoln Park	Public safety enhancement through updated technology.	$143,490
City of Melvindale	Public safety enhancement through fleet replacement of police vehicles and updated technology.	$88,000
City of Pontiac	Community enhancement through blight management.	$125,000
City of River Rouge	Public safety enhancement through improved street lighting. Additionally, infrastructure replacements to City Hall.	$591,508
Royal Oak Township	Public safety enhancement through improved street lighting	$86,559
Royal Oak Township	Public safety enhancement of police services.	$217,593

All appropriated funding has been spent. No future rounds will occur in FY 2015.

~~Applications for the next round of Financially Distressed Cities, Villages, and Townships Grant Program will be available on the Department of Treasury website this spring. Applications must be submitted to Treasury by the close of business on XXX, XXX 31, 2015.~~

~~Preference is generally given to applicants from local units in which:~~

- ~~A financial emergency has been declared in the past five years;~~
- ~~An approved deficit elimination plan for the general fund is currently in place; or,~~
- ~~Two or more conditions indicating "probable financial distress" currently exist.~~

~~For more information about FDCVT grants, including an application for cities, villages, and townships, visit www.michigan.gov/revenuesharing.~~

####

We do not think this footnote is needed (however if you leave it in, you need to put the * at the point of reference and change "distress" to "stress".

~~*Conditions of "probable financial distress" relating solely to school districts are not included as conditions for FDCVT, as school districts are not eligible.~~

Subject: Flint Head Start told to not use city of Flint water?

Hi Jen, Angela,

Ron Fonger from The Flint Journal left me a message stating that DHS told the Genesee Area Intermediate School District told the Head Start program not to use city of Flint
water.

Is that something MDCH did? I'm pretty sure it's not something we'd be doing, but I'm checking with our child care licensing folks to make sure. If this is an MDCH matter, Ron's number is 810-347-9963.

Thanks,

City of Flint Warns of Potential Health Risks Caused by the City's Drinking Water

The city says there's been too much disinfection byproduct in Flint's water system recently, something that -- over many years could cause liver, kidney or central nervous system problems and an increased risk of cancer.

The notice from the city says Flint water is safe to drink but warns that those with a severely compromised immune system, who have an infant or who are elderly may be at increased risk and should seek advice about drinking water from their health care provider.

For others, there is no need to boil water or take other actions, the notice says.

It is recommended that licensed child care providers and licensed adult foster care and homes for the aged providers seek medical advice or use bottle water when serving individuals at increased risk as outlined above.

For more information, go to to the city's website at http://cityofflint.com.

City of Flint Warns of Potential Health Risks Caused by the City's Drinking Water

The city says there's been too much disinfection byproduct in Flint's water system recently, something that -- over many years could cause liver, kidney or central nervous system problems and an increased risk of cancer.

The notice from the city says Flint water is safe to drink but warns that those with a severely compromised immune system, who have an infant or who are elderly may be at increased risk and should seek advice about drinking water from their health care provider.

For others, there is no need to boil water or take other actions, the notice says.

It is recommended that licensed child care providers and licensed adult foster care and homes for the aged providers seek medical advice or use bottle water when serving individuals at increased risk as outlined above.

For more information, go to to the city's website at http://cityofflint.com.

I agree about the concern with this notice going out. Bob and I spoke about this. Bob, I know you may not be involved when every messages like this go out, but I think a conversation should be had with local DHS offices who use GovDelivery about what is appropriate to send and what is not.

Bob, if that went out on Jn. 29, that's what he's referring to. Do you have a response if I refer him to you?

Also, can you send me a copy of that, because I'm certain we'll get questions today.

It's a bit concerning that such a notice went out and we didn't get a heads-up.

Hi Jen, Angela,

Ron Fonger from The Flint Journal left me a message stating that DHS told the Genesee Area Intermediate School District told the Head Start program not to use city of Flint water.

Is that something MDCH did? I'm pretty sure it's not something we'd be doing, but I'm checking with our child care licensing folks to make sure. If this is an MDCH matter, Ron's number is 810-347-9963.

Hi Dave,

I attached the Bureau of Children and Adult Licensing (BCAL) GovDelivery email in my earlier email, but I've cut and pasted below for easier access. As you'll see, the article is making subscribers (primarily people who have licensed day cares and other facilities) aware of the city of Flint warning residents of potential dangers in the drinking water. BCAL is not ordering anyone to do anything. I apologize for not notifying the Governor's Office. I didn't see this until after it went out, and it didn't occur to me that the governor's office would need to be aware of it. In retrospect I should have let you know.

Please let me know if you need any additional assistance.

Thanks,

Bob

Dave,

My response to Ron would be that the Bureau of Children and Adult Licensing included in its e-newsletter an article that made subscribers aware of the situation in Flint. BCAL licenses providers of daycare, adult foster care facilities and homes for the aged, and thought it would be good to alert those providers. It was intended to be informational.

Hope everything is going well today and sorry to complicate things with this issue.

CONTACTS:	FOR IMMEDIATE RELEASE
Sara Wurfel or Dave Murray, Governor's Office 517-335-6397 Terry Stanton, Department of Treasury 517-335-2167	February 3, 2015

Gov. Rick Snyder awards Flint $2 million in 'distressed municipalities' grants for water system infrastructure improvements

Funding to be used for leak detection, waste incinerator replacement

LANSING, Mich. – Gov. Rick Snyder today awarded Flint $2 million in grants for water system infrastructure improvements, part of an overall $8 million plan to help municipalities through the Financially Distressed Cities, Villages, and Townships Grant Program.

Flint is among eleven municipalities receiving grants through the program. The city will use the funding to detect leaks in its water lines and replace its Water Pollution Control Facility Incinerator.

"There are opportunities for state government to assist Flint city leaders as they address issues related to the city's water system," Snyder said. "These grants will help recovering cities improve public services and infrastructure, improving the quality of life for all residents."

The grants to Flint were announced today at the Haskell Community Center by Harvey Hollins, director of the state's Office of Urban Initiatives, and Wayne Workman, the state's deputy treasurer. They were joined by Dan Wyant, director of the Michigan Department of Environmental Quality, Flint Emergency Manager Jerry Ambrose, Mayor Dayne Walling, and state Rep. Sheldon Neeley.

Flint was awarded $900,000 to allow the city to hire a contractor to perform a leak detection survey of the city water lines. The city will receive a map of leak locations and an assessment of leak severity,

allowing the city to prioritize leak repair. The project also covers the expense of conducting a water pipe line wall thickness condition assessment on a portion of the city's pipes. The assessment will guide the city's water main replacement program.

The city also was awarded $1.1 million to shut down its current Water Pollution Control Facility incinerator and replace it with new facilities which will allow for the disposal of waste in landfills. The existing facilities are not up to federal Environmental Protection Agency standards.

Flint Mayor Dayne Walling said he appreciates the state support.

"This announcement comes at the perfect time for Flint as we continue with repairs and upgrades to our water service infrastructure that are in accordance with our new Capital Improvement Plan," Walling said. "This significant funding opportunity from the State will allow us to move forward with two projects that will mean long term cost savings for the City of Flint."

Municipalities are eligible for the grants if they are experiencing one or more conditions indicative of "probable financial stress," as defined by Public Act 436 of 2012, the Local Financial Stability and Choice Act.

Under the grant program, funding may be used to pay for specific projects, services, or strategies that move a city, village, or township toward financial stability. There was $8 million appropriated for the program with a $2 million cap, per local unit.

Gov. Rick Snyder awards Flint $2 million in 'distressed municipalities' grants for water system infrastructure improvements

Funding to be used for leak detection, waste incinerator replacement

LANSING, Mich. – Gov. Rick Snyder today awarded Flint $2 million in grants for water system infrastructure improvements, part of an overall $8 million plan to help municipalities through the Financially Distressed Cities, Villages, and Townships Grant Program.

Flint is among eleven municipalities receiving grants through the program. The city will use the funding to detect leaks in its water lines and replace its Water Pollution Control Facility Incinerator.

"There are opportunities for state government to assist Flint city leaders as they address issues related to the city's water system," Snyder said. "These grants will help recovering cities improve public services and infrastructure, improving the quality of life for all residents."

The grants to Flint were announced today at the Haskell Community Center by Harvey Hollins, director of the state's Office of Urban Initiatives, and Wayne Workman, the state's deputy treasurer. They were joined by Dan Wyant, director of the Michigan Department of Environmental Quality, Flint Emergency Manager Jerry Ambrose, Mayor Dayne Walling, and state Rep. Sheldon Neeley.

Flint was awarded $900,000 to allow the city to hire a contractor to perform a leak detection survey of the city water lines. The city will receive a map of leak locations and an assessment of leak severity, allowing the city to prioritize leak repair. The project also covers the expense of conducting a water pipe line wall thickness condition assessment on a portion of the city's pipes. The assessment will guide the city's water main replacement program.

The city also was awarded $1.1 million to shut down its current Water Pollution Control Facility incinerator and replace it with new facilities which will allow for the disposal of waste in landfills. The existing facilities are not up to federal Environmental Protection Agency standards.

Flint Mayor Dayne Walling said he appreciates the state support.

"This announcement comes at the perfect time for Flint as we continue with repairs and upgrades to our water service infrastructure that are in accordance with our new Capital Improvement Plan," Walling said. "This significant funding opportunity from the State will allow us to move forward with two projects that will mean long term cost savings for the City of Flint."

Municipalities are eligible for the grants if they are experiencing one or more conditions indicative of "probable financial stress," as defined by Public Act 436 of 2012, the Local Financial Stability and Choice Act.

Under the grant program, funding may be used to pay for specific projects, services, or strategies that move a city, village, or township toward financial stability. There was $8 million appropriated for the program with a $2 million cap, per local unit.

As you'll see, the article is making subscribers (primarily people who have licensed day cares and other facilities) aware of the city of Flint warning residents of potential dangers in the drinking water. BCAL is not ordering anyone to do anything. I apologize for not notifying the Governor's Office. I didn't see this until after it went out, and it didn't occur to me that the governor's office would need to be aware of it. In retrospect I should have let you know.

City of Flint Warns of Potential Health Risks Caused by the City's Drinking Water

The city says there's been too much disinfection byproduct in Flint's water system recently,

something that -- over many years could cause liver, kidney or central nervous system problems and an increased risk of cancer.

The notice from the city says Flint water is safe to drink but warns that those with a severely compromised immune system, who have an infant or who are elderly may be at increased risk and should seek advice about drinking water from their health care provider.

For others, there is no need to boil water or take other actions, the notice says.

It is recommended that licensed child care providers and licensed adult foster care and homes for the aged providers seek medical advice or use bottle water when serving individuals at increased risk as outlined above.

For more information, go to to the city's website at http://cityofflint.com.

I agree about the concern with this notice going out. Bob and I spoke about this. Bob, I know you may not be involved when every messages like this go out, but I think a conversation should be had with local DHS offices who use GovDelivery about what is appropriate to send and what is not.

Bob, if that went out on Jn. 29, that's what he's referring to. Do you have a response if I refer him to you?

Also, can you send me a copy of that, because I'm certain we'll get questions today.

It's a bit concerning that such a notice went out and we didn't get a heads-up.

maybe that's what the intermediate school district is talking about regarding the Head Start program.

It's possible MDE could have issued something as well, so I'll check with them.

Hi Jen, Angela,

Ron Fonger from The Flint Journal left me a message stating that DHS told the Genesee Area Intermediate School District told the Head Start program not to use city of Flint water.

Is that something MDCH did? I'm pretty sure it's not something we'd be doing, but I'm checking with our child care licensing folks to make sure. If this is an MDCH matter, Ron's number is 810-347-9963.

Hi Natalie,

I received your message (below). I apologize for not responding sooner.

The message that the DHS Bureau of Children and Adult Licensing (BCAL) sent regarding this issue was to subscribers of a BCAL e-newsletter – primarily received by licensees for child care facilities, adult foster care facilities and homes for the aged. I'm not really comfortable sharing that with you.

The message was a recommendation – not an order – that suggested the licensees in Flint seek medical advice or use bottled water when serving young children and the elderly. BCAL was working off what the agency thought was the most current information on Flint water quality when it issued the e-newsletter. However, it would be best for you to speak to the Michigan Department of Environmental Quality (DEQ) about that, because that state agency has the most up-to-date information about Flint water quality.

You can contact my colleague Brad Wurfel from DEQ at 517-284-6713, 517-230-8006 or wurfelb@michigan.gov.

Thanks,

Would add that the city (Earley, Ambrose, etc.) have been unequivocal that doing so would cost at least $1m per month…per the DWSD "offer"…and the city simply cannot afford that.

I have also heard that the city no longer owns a section of pipeline that would have to be used in making any re-connection…making that more difficult and expensive.

I talked with him earlier today. We can say that we are exploring all the options available to us to respond to the concerns of the citizens of Flint. Pastor Harris is our point of contact and we can say that also.

Only problem with that is that the citizens of Flint say they are paying more now than they did when they were connected with DWSD. The city, after all, is not giving the water away free right now, so there is some kind of equalization that comes into play here. Additionally, we just gave them $2M so if we need to use it for a reconnect that's probably a good use of the money as opposed to people refusing to use city water. Since we're in charge, we can hardly ignore the people of Flint. After all, If GM refuses to use the water in their plant and our own agencies are warning people not to drink it, another expressing continuing concern over quality, and the differential between what we now collect and what we would pay DWSD is not significant, we look pretty stupid hiding behind some financial statement.

Subject: FLINT WATER NOTES

Hey, friends. Anticipating more coverage this week on Flint, want to make sure we are all looped in and on the same page. Treasury takes calls on funding and money and the EM. DEQ takes calls on water quality. Here's what I can share about the water quality part.

Total Trihalomethanes (TTHM) are a byproduct of too much chlorine to kill organic material in a water supply. They are among the 80 toxins water suppliers monitor. They are considered a long-term health hazard. As such, they're sampled from water systems every quarter. Systems are required to remain below 80 parts per billion on a yearly average (four quarters). Flint exceeded the average in the course of three quarters last year.

Water system operators around the state periodically get a high result for TTHMs. When consecutive quarters of testing remain at high levels, it's usually a sign that operators are using too much chlorine to address high levels of organic matter in their water source. This most frequently affects systems that use surface water as a source. And several municipal water systems around the state do use surface water (rivers) as a source.

When a water system exceeds this standard, the operator gets a very formally worded violation notice from DEQ that says, effectively, "hey, your numbers are high. Alert your customers and figure out how you're going to bring your numbers back down." This is not as serious as a boil water advisory situation. But, the (think decades) long-term risk of drinking water with high TTHMs is an increased risk of exposure to cancer causing agents, so it's not a situation that the state can accept as status quo.

Because TTHM is measured on an annual (quarterly) basis, it will take a couple quarters of clear results before the city's average falls below the guidelines. This

means Flint will probably be issuing another public notice about TTHM in March, despite that the high samples were late last summer.

Flint's numbers have dropped dramatically since the November testing and they're presently in compliance with state drinking water standards.

The water as it leaves the plant is clean, sanitary and safe. However, the water supply system is old, poorly maintained and many residents' connections are also old and poorly maintained. Thus, some residents are experiencing water that smells off or is discolored. This is from the transmission system, not the production system. The three top issues appear to be

a. Hard water interacting with cast iron pipes, causing water that looks rusty (and likely tastes a bit irony)
b. Water sitting too long in the pipes because of valves not working properly or limited users in some sections of the system; or,
c. Residents with old homes that have cast iron connections contributing to the hard water issue.

So, how do we message this issue in light of the many variables at play?

1. Right now, water produced at the Flint plant is meeting state safe drinking water standards.
2. DEQ is aware that many residents have concerns about smell, color and other aesthetic qualities of their water. There are several potential causes for aesthetic water conditions. Residents with these concerns are encouraged to contact the City first to report problems. They also can contact the Michigan DEQ, but the City operates the system and needs to be alerted to concerns with their system to help document problem areas and prioritize improvements.
3. Total Trihalomethane (TTHM) is odorless and colorless. It is regarded as a long-term health concern. TTHM was included in the list of toxins screened under the Safe Drinking Water Act because of its potential for long-term potential health concerns. This is why it is only sampled quarterly. The water operator is required by law to notify residents when the annually averaged standard has been exceeded, and the system operator is required to take active steps to get back into compliance with the standard for TTHM.

4. Residents received notice because the law requires transparency and works to help ensure residents can make informed decisions. The notice residents received early this month is a totally separate issue from the water discoloration issues some residents are reporting.
5. The DEQ continues working with Flint Water system operators to ensure that residents receive water that complies with state drinking water standards. This system is tested regularly and rigorously, and the results are reported to customers as outlined in the Safe Drinking Water Act.

Here's what our Bureau of Children and Adult Licensing emailed on Friday:

City of Flint Warns of Potential Health Risks Caused by the City's Drinking Water

The city says there's been too much disinfection byproduct in Flint's water system recently, something that -- over many years could cause liver, kidney or central nervous system problems and an increased risk of cancer.

The notice from the city says Flint water is safe to drink but warns that those with a severely compromised immune system, who have an infant or who are elderly may be at increased risk and should seek advice about drinking water from their health care provider.

For others, there is no need to boil water or take other actions, the notice says.

It is recommended that licensed child care providers and licensed adult foster care and homes for the aged providers seek medical advice or use bottle water when serving individuals at increased risk as outlined above.

For more information, go to to the city's website at http://cityofflint.com.

Subject: RE: Channel 12

Hi Randy,

This should definitely come to me to answer rather than being answered at the local office. I'm CC'ing Brad Wurfel from DEQ Communications.

We can tell her how much SER funding is available, but I don't think we're the ones who could or should say how much it costs for water, how much it costs to turn the water back on and/or why people in Flint are without water.

Thanks,

Bob Wheaton

To: Wheaton, Bob (DHS)
Cc: Mose, Sandi Kay (DHS)
Subject: Channel 12

Angie Hendershot would like to interview someone from this office regarding what the State pays for SER towards water bills. Turn on fees and the like. ABC 12 is doing a story about the water issues in Flint and the piece their interested in now is about the cost of the water and how much it costs and why so many people are without water. Then what it costs to get the water back on.
Do you want us to refer her to you or talk to her locally. I would have to discuss this with Sandi Mose, because SER is in her area.

Subject: RE: Flint Water Update

Thanks, Terry.
Heads up to all that Flint is required to do its quarterly TTHM sampling again in February. We expect their numbers to be in compliance. But we also expect that they were so far out of compliance in three quarters of 2014 that their annual average will still be out of compliance, which will require them to send another letter to the community in accordance with the safe drinking water act. So the show will, unfortunately, go on.

Hi Angie,

Here is data for Genesee County on DHS assistance for water/sewer and for reconnect/disconnect fees. I've been told that we don't track by city, but I'm double-checking. What do you mean when you say that "DHS was able to get Flint to a different rate …"? Are you saying that DHS was increasing the maximum dollar amount of State Emergency Relief assistance for water customers in Flint?

For the period of October – December 2014 the following payments were made in Genesee County for water/sewer:

Unduplicated Recipients	Total expenditures
1,110	$56,035.26

In addition, the following reconnect/disconnect fees were paid:

Unduplicated Recipients	Total expenditures
512	$26,253.68

Thanks,

Lol – thanks!
If you can break it down for flint and genesee county that is my first choice – the story is about flint. Or if you can show me how to break it down or point me in the direction of someone who can help with that (even off camera) I'd really appreciate it. I do know Flint was so much higher that DHS was able to get flint to give them a different rate – so it must have been broken down at one point? I could really use your help with this.

To: Hendershot, Angie
Subject: RE: Water

Hi Angie,

This issue is not something we're going to want our Genesee County DHS officials to comment on. Communication with media about the Flint water situation has been handled by the communications staff/leadership at the relevant state agencies. And it wouldn't be appropriate for DHS to get involved in any discussion regarding any water rates in Flint or in any other community.

I can tell you that DHS Children's Protective Services will not remove a child from a home solely because of the lack of water in that home. We will work with families to address the issue – by providing State Emergency Relief funding from DHS, by suggesting that children use water at relatives' homes, by referring families to call 211 or turn to local nonprofits for assistance. DHS also has provided hygiene kits to children in schools and has caseworkers in schools in Flint and around Michigan to assist children and families with these types of issues.

Unfortunately, there are low-income families in communities around the state who at times struggle to pay their water bills. Families that meet income eligibility requirements can receive State Emergency Relief if they have had their water shut off or have received shut-off notices. State Emergency Relief of up to $200 is available for reconnecting to water services and up to $175 to pay past due bills needed to reconnect.

> Hi Bob,

I'm working on a story about people in Flint who are getting reported to CPS because they don't have water. Their children are coming into school -- and they are not clean, stink or struggle because they do not have water at home. I have heard this is a big problem because of the service fees, shut off fees and cost of Flint water. Those on fixed incomes are struggling -- even with help from DHS. I want to talk to someone in Genesee County about how common this is -- what they are seeing (as far as families living together, going without water, illegally hooking up water, etc) Also -- about the resources DHS is having to use to pay fees to hook up water once it is cut off.

Thank you,
Angie Hendershot

Subject: Water

Hi Angie,

I just tried to return your call, and got a message that your voice mail box is full.

The Michigan Department of Human Services offers State Emergency Relief to eligible households that have had their water disconnected or that have received a disconnection notice. We can assist with up to $200 for reconnection, and $175 to pay past-due bills that are needed for someone to have water services restored or prevent disconnection. We always encourage people to try to work with their provider if they start falling behind on paying their bill so they don't reach the point of a disconnection.

I believe you also had some questions about the cost of water in Flint and the cost of reconnection. We really wouldn't want to speak to that. I would defer to the people at the city of Flint to provide that type of information.

Thanks,

Bob Wheaton

>
> Might want to get Jarrod and Terry Stanton on this as well as Harvey. Otherwise it will get out of hand. It's in the city's long term interest to make the KWA work and we can make the river water safe, but we need to work with the ministers this week to help them out. It's tough for everyday people to listen to financial issues and water mumbo jumbo when all they see is problems. You can't expect the ministers to hold the tide on this problem.
>
> How about cutting a deal with Ice Mountain or Bill Young and buying some water for the people for a time? $250K buys a lot of drinking water and we could distribute it through the churches while we continue to make the water even safer.

Subject: FW: Tap Filters

Harvey,
Since group call Tuesday I have been working out how the filter idea might take shape.

To reiterate some key points so we're all clear:

1. DEQ does not inspect individuals' homes in a situation like this. It's the city's system, their operators handle all complaints and maintenance. In fact, our folks alerted me that the city's got union rules in place forbidding any contractor from touching the system.
2. DEQ's role is limited to ensuring the plant is operating to state standards and the water it produces meets potability standards. The aesthetic issues drawing concern from residents – color, odor, taste – stem from a variety of things. Age of the system and prolonged lack of upkeep is the leading factor. But in some areas, another contributing factor is changes in water flow – source used to come from the south, now comes from the north, so some pipes are flowing in reverse, stirring up whatever was settled for a long time. In some sections, large pipes that historically served large communities are now serving a much smaller customer base, contributing to water stagnating in the system. In some areas, household connections are old and worn, so two neighbors may be having dramatically different experiences. My point is, the challenge takes many forms and there's no single solution that will bring sweeping change. The two consultants hired by the city have, as I understand it, both reinforced this idea in their assessments, so that's good.

3. The fix for this will be years in the making, truly. Even if full funding were available, 'big dig' projects can't all happen at once. The city needs to get an assessment of its infrastructure so it can prioritize its needs, and I understand

they're working on that. In the near term, maintenance this spring / summer – things like cleaning the pipes in key sections and flushing the system via the hydrants – could offer some short term results. I know nobody wants to just wait for spring, but that is something important to keep in mind.

4. In the meantime, the group discussed possibly making home water filters available somehow. The National Safety Foundation is a Michigan company, headquartered and founded in Ann Arbor, that develops standards for all kinds of infrastructure. They're a globally recognized source for standard setting. A look at their site reveals there are myriad filtration options on the market and within each type (faucet mounted, whole house line filters, etc) there are filters that focus on different aspects of purification.

   If this idea begins to get legs, I'd suggest testing some different models on the local water at the customer level to see if they work. I'd also suggest the idea be focused on tap-mounted models to promote clean, appealing drinking water. And I'd suggest this program could be funded in whole or in part by the state, but would need to be administered by the city (reinforcing the fact that they own, operate and service the system). I've got some information on filter models below.

   Two more considerations: One, while the state has provided residents in some communities with bottled water in the past, it always has to do with their water being somehow contaminated – as in, some kind of chemical plume that impaired local drinking water sources. This would be the first time the state took steps to deal with what is an aesthetic issue on a system where the water is meeting state drinking water standards.

Water filter info:
ANSI NSF Standard 42 Covers bacteriostasis, taste and odor (associated only with chlorine removal), and other aesthetic conditions
http://standards.nsf.org/apps/group_public/download.php/19895/NSF_42-11%20-%20watermarked.pdf

ANSI NSF Standard 53 Covers health effects removal
http://standards.nsf.org/apps/group_public/download.php/19896/NSF_53-11a%20-%20watermarked.pdf

It is important to note that the filters are not required to meet all aspects of the standard, only the portions they want to make claims for. So product information for each filter must be reviewed to determine its applicability.

Most of these point of use filters are basic activated carbon filters that simply remove taste and odor specifically associated with chlorine, not other things like iron, manganese, hydrogen sulfide, etc. that can also impact taste and odor as well as color.

It is important to recognize that taste and odor is generally an individual preference and such standards have for the most part not been developed because groups of individuals may still consider taste and odor issues to exist even after levels for such a standard have been met.

Other considerations are that the test water for such filters attempting to meet the standard uses hardness levels of 170 mg/L or less. Flint's water at times may be above this level, which could then impact filter performance and longevity.

Most of these filters are designed to be replaced after 100 gallons or less of use, a period of about 3 months for most households. In addition the tests allow for initial pressure drops of up to 15 psi. This may limit use in households that already rely on minimum pressure within their household plumbing.

Regarding the health effects standards, as the Flint water system already meets such requirements, with the exception of the current TTHM locational running annual average, there is little point to the use of these filters for such a purpose.

To the point you'd asked about the other day, while Flint and Detroit are leading examples of unmaintained infrastructure, Flint is not alone by any means.

This recent infrastructure report card
http://www.infrastructurereportcard.org/michigan/michigan-overview/
Lists Michigan with a $13.8 Billion need over the next 20 years.

http://www.infrastructurereportcard.org/a/#p/state-facts/michigan

Here's a link to the 2009 Report Card for Michigan Infrastructure
http://www.michiganreportcard.com/

From the report:

"A significant portion of the state's primary distribution system is nearing 100 years old. CWS are facing a significant challenge to maintain the vast network of aging, underground infrastructure. Within the city of Detroit alone, approximately 80% of its distribution piping was installed prior to 1940, which is not unusual for CWS in Michigan."

"The age of the majority of the state's distribution system is the primary contributor to normal decay and failure. In many cases, pipe life has far exceeded useful service life. Much of the older water systems consist of undersized mains constructed of materials such as unlined cast iron pipe. Minor fluctuations in system flows or pressure may cause red water complaints and even result in pipe failure. All CWS should have routine flushing and valve maintenance programs; however many are hesitant due to the time and cost."

"Under the Stage 2 Disinfection Byproducts Rule, all CWS that disinfect are required to provide increased trihalomethane (THHM) and haloacetic acid (HAA5) monitoring due to the potential byproducts of chlorine reactions within the pipe system. Corrosion, scale, solid suspension on the interior sidewall of pipe, in addition to the age and condition of the system will require diligent rehabilitation investment to maintain system integrity."

"While better materials and advanced technology is available to replace the aging distribution system, resources remain scarce when compared with the magnitude of the rehabilitation task at hand. Too often, distribution system replacement costs are underfunded and the first item to be slashed when budget problems arise. Overall, distribution system maintenance is reactionary in much of the older systems. Since the majority of the antiquated system will require removal and replacement beyond the CWS funding resources for systematic upgrade, a reactionary rehabilitation program is inevitable and must be funded accordingly."

Call or email me if you need anything further.

Subject: RE: PIO report

Flint: They're technically still in violation of the total trihalomethane rule this quarter. All tested water in February was well below the standard, but the standard is calculated based on an average that includes the previous three quarters, and the fall 2014 results were mighty high. That'll be in the rearview with the next round of testing late spring.

In terms of next steps, not sure if you mean next steps for the city or Team RS. The city has spent tens of thousands hiring water specialists to advise them formally of what they already know and already were told by the DEQ: If you do no maintenance on your drinking water system for 40 years, it eventually begins to fail in ways big and small. However, they've gotten some positive press for hiring shiny, fancy out of state people who purport to specialize in river-based water supply challenges, so there's that.

We've encouraged them to develop a triage list of maintenance areas -- which pieces of this 500-mile system are in greatest need right now, this year and next year? Once they've got that, the next step will be figuring out how to pay for it without causing another rate increase. Honestly, the big squall in Flint (and I heard Jerry Ambrose say it early this week) comes down to the fact that folks are paying approximately double what they should for water. There's no way to adjust that in the near term, but if team RS wants to truly help, treasury could look for some funding to assist with emergency maintenance projects this spring.

Team RS continues looking at some immediate term gestures, including dropping off bottled water or filters to homes that say they've got discolored or stinky water. If someone asked me what I think is the best possible 'thing' we could do to be seen helping Flint, it's this: Treasury gave them $2 million a couple months ago. $900,000 of that was to do system-wide assessment. That project is underway. When they get results, it'll include the list of hotspots in their system that are most in need of immediate address.
They need to do some maintenance work, like scrubbing the mung out of their pipes in some areas. THAT will reduce the discolored / odorific water. If there's a way to have the state support that work, it'd be huge help.

Subject: PIO report

Sorry I missed the meeting. Had a couple conflicts. Here's what I want to share with you:

1

2 Not Responsive

3. **Flint Water:** had a meeting yesterday with a company Baird put in the room to discuss their ozone technology. It was a good conversation but a non-starter for several reasons (Flint already has an Ozone system to modify its water, this company hasn't had its system certified for use on public drinking water supplies, and the problem they propose to address is not at the water plant but throughout various sections of the distribution system). More broadly, Harvey is looking for a 'thing' the state can be doing for Flint that will position SOM / RS positively. Suggestions range from handing out home water filters (think Britta faucet mount) to passing out jugs of water. After consulting with our experts in the Drinking water program, what we've really come to at DEQ is that if there's funding from treasury (or some charitable donor foundation), the best short-term use of dollars would probably be to hire a company to 'pig' the lines in the distribution system. This is a routine maintenance activity in municipal systems that involves an in-line device under pressure that clears funk out of the lines. **The good news on Flint**: Flint EM Jerry Ambrose noted yesterday that the city has some work to do on its system in the weeks ahead; the TTHM issue is quickly going away; the 'brown water' folks are loud but

really few in number; the consultants are doing their work to make suggestions to help the city prioritize its needs; and, broadly, nobody seems to be targeting the administration recently.

Subject: READ THIS PLEASE
Attachments: FOIA Request Flint Water.doc

Political flank cover out of City of Flint today regarding the spike in Legionnaires cases. See enclosed. Also, area ministers put a shot over the bow last night in MIRS with a call for Snyder to declare state of emergency there and somehow 'fix' the water situation.

It may be very advantageous to get Treasury, Gov's office, DCH, DEQ and Flint EM around a table Monday to do the following:

1. Update on what the City is doing.
2. Update on what County Health department is working on.
3. Discussion of what we might all do next.
4. Coordination of communication / messages.

Did not want to reach out to Dennis without your approval / support. Please advise.

Subject: RE: Information Request and Documentation

Mr. Henry,

The January 27, 2015, FOIA request you provided was directed to the City of Flint, not the DEQ. The DEQ has no record of a FOIA request from your office for such information. It is our understanding that the City has responded to your FOIA request, has helped you adequately redefine your request within the City's scope of public record to address such ambiguities as "any additional areas of concern", and provided you with additional information beyond the scope of your request.

The DEQ fully recognizes the public health threat posed to individuals that contract Legionnaires' Disease with the understanding that the disease is not contracted by ingestion of potable water and therefore not regulated under the federal Safe Drinking Water Act. Your email below claims that you have explicitly explained the situation to our Department. However, since contacting our office early last October to indicate a rise in cases, we have not received any further information regarding your epidemiological investigation into this matter.

Further, conclusions that legionella is coming from the public water system without the presentation of any substantiating evidence from your epidemiologic investigation appears premature and prejudice toward that end.

It is highly unlikely that legionella would be present in treated water coming from the City of Flint water treatment plant given the treatment plant's use of ozone along with complete treatment and chlorine disinfect contact time to comply with federal surface water treatment rules for potable water. Detections of total coliform or heterotrophic bacteria in the City's public water distribution system indicate an environment where bacterial growth may be

supported. However, there is no direct correlation that can be made to the presence of legionella. While total organic carbon levels in potable water may serve as a food source for bacteria growth in private plumbing system, water temperatures in the City's distribution system are below legionella growth range, and chlorine residual levels would also limit such growth.

Our office agrees that water main breaks, water leaks, and system repairs are possible vectors for legionella to enter the public water system. These should be investigated as part of your epidemiology. DEQ staff can be made available to assist GCHD and the City regarding such matters, but to date no request by GCHD for any such meeting has been received, let alone declined as alleged in your email.

If GCHD is seeking assistance to complete its epidemiological investigation regarding this matter, such resource requests should be directed to the Michigan Department of Community Health. Our Office agrees that a multi-agency partnership would be beneficial to move forward and develop a unified response. In that respect, if our Office can be of any further assistance you may contact me directly.

Subject: Information Request and Documentation

Hello everyone,

The Genesee County Health Department has made several written and verbal requests for specific information since October, 2014, including a Freedom of Information Act Request on January 27, 2015. The information still has not been received and the city's lack of cooperation continues to prevent my office from performing our responsibilities.

The Genesee County Health Department has the responsibility to conduct illness investigations and consider all potential sources, this is not optional. In 2014, Genesee County experienced a significant increase of confirmed Legionella illnesses relative to previous years. Legionella can be a deadly, waterborne disease that typically affects the respiratory system.

The increase of the illnesses closely corresponds with the timeframe of the switch to Flint River water. The majority of the cases reside or have an association with the city. Also, McLaren Hospital identified and mitigated Legionella in their water system. This is rather glaring information and it needs to be looked into now, prior to the warmer summer months when Legionella is at its peak and we are potentially faced with a crisis.

This situation has been explicitly explained to MDEQ and many of the city's officials. I want to make sure, in writing that there are no misunderstandings regarding this significant and urgent public health issue. The Trihalomethane issues "pale in comparison" to the potential public health risks of Legionella.

I am submitting the attached FOIA request again and requesting that the legal obligations of the request are met. If the information is not available, please let me know. In the past, I have requested to meet with the water plant staff and MDEQ regarding Legionella concerns. I did not receive a response from the water plant staff and MDEQ declined. I think it is in the best interest for all stakeholders that we meet and discuss the issues.

Respectfully,

Jim

RE: Flint Water Plant Information Request

Dear FOIA Coordinator,

Under provisions of the Michigan Freedom of Information Act (MCLA 15.231 et seq; MSA 4.1801 (1) et seq) please provide copies of the following:

Provide specific water testing locations and laboratory results within the City of Flint public water system for Coliform, E-coli, Heterotrophic Bacteria and Trihalomethanes from January 1, 2010 to January 27, 2015. Provide any additional water testing that has been conducted for identifying potential public health risks. Include any available mapping of the water testing areas.

Provide a map delineating the boundaries of the City of Flint water distribution system. Include any changes to the boundaries, along with corresponding dates from January 1, 2014 to January 27, 2015.

Provide a map or list of locations, detailing dead ends, pooling, low pressure and any additional areas of concern within the City of Flint water distribution system. Include any modifications to the water distribution system addressing concerns, along with corresponding dates from January 1, 2014 to January 27, 2015.

If you determine that any of the requested information is exempt from disclosure, please detail what is being withheld and cite the exemption under FOIA. I anticipate the request being filled within five working days of receipt of this letter, as provided under FOIA. Please contact me at (810) 257-3618 if there are fees associated to comply with this request.

Sincerely,

Jim Henry

Hey Dave:
Thanks for the reply.
I always try to report what I know to be accurate, but in this case, no one from the city has contradicted what Bowcock (and now Brockovich) said about Flint water rates being nearly eight times higher than the national average.
As for the rest, she's giving her opinion about the political situation here and mentioned the governor, mayor and emergency manager so I wanted to give each the chance to respond.
Thanks,

Dave:
Erin Brockovich posted this on her Facebook page this afternoon and I've been asked to post about it.
Since it mentions the governor, I wanted to see if your office wants to comment.
Thanks,

Erin Brockovich
2 hrs ·
How to Destroy a City - the American Way.

It has been one month since I became involved with the City of Flint, Michigan, a community expressing deep concern about high sewer and water system rates, for drinking water that fails to meet basic water quality regulations.

The United States Environmental Protection Agency has publish that the average cost for water in the United States is $2.00 per 1,000 gallons, including the service charge. Comparing apples to apples, Flint residents are paying $15.80 per 1,000 gallons, almost 8-times the national average.

The City of Flint starts with a service charge of $39.60 (if divided by a high average of 10 units, it represents an additional $3.90/unit) and a unit charge of $7.92/CCF; Flint's unit is 748 gallons. So, at $11.82 per unit, a 10 unit bill would be equal to $118.20 for 7,480 gallons.

If you can afford the water you're fortunate; if you cannot afford the water you are evicted from your homes or your businesses shutdown.

All of this is perpetrated with Democracy held hostage by a Governor appointed "Emergency Manager"...the elected Mayor a mere ceremonial figure head.

Attachments: DWRF Bond Restructuring.docx

Dave...

The City of Flint is looking to issue this around noon. Jason is aware the date at the top is wrong and is fixing it.

Tom Saxton, Wayne Workman, and our bond folks have signed off.

I sent it to Brad at DEQ before realizing he is with Sara and may not see it. I don't know who the #2 is at DEQ (or if BW has a #2)...but thought maybe you could share with them.

Saxton has shared it with Jim Sygo, Dep Director with DEQ.

Jason Lorenz
Public Information Officer
(810) 237-2039
jlorenz@cityofflint.com

For Immediate Release

Flint Emergency Manager Authorizes Bond Restructuring to Afford Additional $2.24 Million toward Capital Improvements in Water

Flint, Michigan – February 25, 2015 – Flint Emergency Manager Jerry Ambrose today authorized a restructuring of four outstanding Drinking Water Supply Revenue bonds to allow postponing current principal payments in the total amount of $2.24 million. This action will allow the $2.24 million budgeted for debt service to be utilized for expenses associated with maintaining safety and improving quality of the Flint water supply. Approval of the State Treasurer is required before the restructuring can occur.

Flint has recently received a final report from Veolia, its water expert advisor, making a series of recommendations to maintain and improve the Flint water supply. These recommendations, along with other input as well as items identified in the City's current capital improvements plan, will be considered as the City develops and implements its action plan to maintain and improve the Flint water supply. Discussion on the development of the action plan will begin today, March 19, 2015 at the Water Advisory Committee meeting, scheduled to begin at 2:00 pm at the Flint Public Library.

The State of Michigan was instrumental in allowing the restructuring, as approvals are required by both the State Treasurer and the Director of the Michigan Department of Environmental Quality. "At all levels, the State of Michigan has been most cooperative in assisting the City of Flint as it addresses the many issues confronting the Flint water system", said Ambrose. "Access to $2.24 million at this time will be very helpful in

–CONTINUE–

moving forward with our action plan."

The proposed restructuring will free up funds to enable the City to more quickly begin implementing recommended improvements to its water treatment and distribution system. Several recommendations for improvement are currently unbudgeted, and the $2.24 million will help assure that the most important can be performed.

Recommendations to be considered include the addition of a Granulated Activated Carbon Filter, estimated at as much as $1.5 million; acceleration of the repair and replacement of values, estimated at an additional $120,000 annually; additional pipeline replacement, estimated at $1 million per mile; and acceleration of the project to automate plant operations, estimated at $450,000. $1.315 million will become available in the City's current fiscal year, and the remaining $925,000 will be available in the next fiscal year.

The bonds are currently financed at a rate of 2.5%, and postponement of the principal payment will incur some additional interest expense over the life of the issue. Interest costs will increase by approximately 2.5% ($228,000) over the 20 year life of the issues.

–END–

Subject: revolving water loan forgiveness

Dave:
We wrote a story Thursday about Jerry Ambrose restructuring bond repayments to free up money for water system work.
I had a chance to talk to the mayor later and am working on a follow-up. He says he wants loan forgiveness rather than restructuring, and recalled that he requested that in his letter to the governor.
Is loan forgiveness for all or part of Flint's revolving water loans being considered?
Thanks,

Ambrose restructuring:

Hey Dave:
Just came out of our morning meeting and we've decided to write about the most recent Facebook comments of Flint Councilman Wantwaz Davis (who is also a candidate for mayor).
The comments are similar to those made last month by the president of the Michigan chapter of Al Sharpton's National Action Network, who said Flint water is "almost as bad as gas chambers for Jews." (We spoke out against those comments editorially after covering it as a news story)
Here is Davis' unedited comment, which includes his contention that the governor and emergency manager are "creating an obvious genocide against the residents of Flint."
Thanks,

Wantwaz Davis
18 hrs · Edited ·
It has become apparent to me that the emergency manager and Governor Rick Snyder is creating an obvious genocide against the residents in Flint, Michigan, who are forced to drink the contaminated, unhealthy water, that is going to commit an imminent danger to the lives of those who have a compromised immune system, and infants who biologically doesn't have a fully developed immune system. When I become mayor, I will certainly make the governor and all who took part in continuing to have the residents in Flint, Michigan exposed to this injustice and inexcusable danger accountable; this cannot carry on without someone becoming accountable and or responsible; It is so unfair that people in the future may contract a disease that will carry through the duration of their lives. The emergency manager is choosing finances and fixture of infrastructure, i.e., old pipes that hasn't been worked on for the past 60 to 70 years over lives and welfare of innocent civilians. Someone has to be charged with this neglect and imposition of danger amongst a helpless people; all of this is the effects of bad leadership. I must reiterate and can never say it enough, when I become mayor, which will be the best leader and or Chief administrator the City Of Flint, Michigan has ever chose. I will fight hard, not only against the unjust conditions we have long suffered from, but will make someone accountable for this genocide and address these unfortunate conditions around the nation and beg for the assistance of the Department of Justice (United States Attorney General's office) to do a through investigation, so in the end, if any one contracts a disease in the future, I would attempt to have them charged and brought to justice, including a civil suit, in the federal courts; someone has to be punished for the ills of the residents of Flint, Michigan. In conclusion, please vote August 4, 2015, for Wantwaz Davis for Mayor. Bad leadership and decision making has to come to an end at some point and time, and that will certainly be the day I am sworn in as your new mayor and Chief Administrator. This is a picture of reminder that in the past summer, I conducted 4 protest against the contaminated water and high water bills, I was telling people about the unhealthy water, before any notices came out to the public, attempting to keep these issues at the forefront, as mayor I will continue to fight even harder, these issues will not die until justice is brought to the people and someone is charged for this imminent genocide.

Subject: RE: request for comment

The governor believes **everyone** in Michigan deserves clean, safe drinking water. It is why Michigan has a great team of professionals at the DEQ to oversee municipal drinking water operators around the state and make sure they comply with state and federal drinking water standards. And it is worth noting that, today, the city's drinking water system is producing water that meets state and federal standards.
More alarming than the councilman's incendiary and inaccurate remarks is the underexamined fact that the city has failed to properly maintain its drinking water system for the past 40 years, and the impact of that system-wide neglect is starting to show in ways big and small. When the city council votes to return to Detroit as a water supply, it makes a strong statement: they are committed to continuing to spend money they don't have while continuing to ignore the real problem -- simple maintenance of the pipelines.
For its part, The State of Michigan will continue working with city leaders to establish a schedule for necessary fixes and long-term solutions that align with Flint's major needs and available dollars. The problem with the city's water supply did not happen overnight, and a real fix won't happen overnight, either.

I think my RPA is in my other sportcoat. Going to look for it now. …

I've been going back and forth with Ron this morning, asking if every Facebook post is now considered news and whether he will actually include a definition of what genocide is to people will know what he's actually accusing us of. He needs to start holding people accountable for their actions, rather than just cutting and pasting from Facebook.

That said, here's my RPA response, trying to point out that this is a long-standing city problem, and we are helping. I definitely don't want to go point for point with these guys. Think this works?

It's unfortunate that the councilman used such inflammatory rhetoric. The governor believes Flint residents need and deserve safe, clean water. The state continues working with city leaders to help

with their water infrastructure challenges, which were years in the making. That assistance includes $2 million in grants to help with leaks and other issues, which will allow the city to prioritize its repairs and help residents more quickly.

David,

I'm working on a story about the Flint councilman's "genocide" accusation against the governor.

what's the governor's reaction to the comment? and, could it affect the governor's decision to allow the city to move from an emergency manager to a transition advisory committe?

Subject: flint loan forgiveness

Hi Dave:
I'm working on a story about Congressman Kildee asking the U.S. EPA for clarification as to whether the city of Flint's loans issued under the Safe Drinking Water State Revolving Fund are eligible for forgiveness.
Kildee's office is expected to issue a news release later today but I just spoke to him and will be posting a story about this this afternoon.
Kildee specifically is asking the EPA about two provisions in federal law that he says could potentially allow for loan forgiveness for a "disadvantaged community."
Does your office want to comment? I'm specifically interested in whether the governor would consider loan forgiveness if the EPA says the loans are eligible for that.

Subject: PRESS RELEASE: EM Authorizes DWRF Bond Restructuring

Flint Emergency Manager Authorizes Bond Restructuring to Afford Additional $2.24 Million toward Capital Improvements in Water

Flint, Michigan – March 19, 2015 – Flint Emergency Manager Jerry Ambrose today authorized a restructuring of four outstanding Drinking Water Revolving Fund (DWRF) bonds to allow postponing current principal payments in the total amount of $2.24 million. This action will allow the $2.24 million budgeted for debt service to be utilized for expenses associated with maintaining safety and improving quality of the Flint water supply. Approval of the State Treasurer is required before the restructuring can occur.

Flint has recently received a final report from Veolia, its water expert advisor, making a series of recommendations to maintain and improve the Flint water supply. These recommendations, and other items identified in the City's current capital improvements plan, will be considered as the City develops and implements its action plan to maintain and improve the Flint water supply. Discussion on the development of the action plan will begin today, March 19, 2015 at the Water Advisory Committee meeting, scheduled to begin at 2:00 pm at the Flint Public Library.

The State of Michigan was instrumental in allowing the restructuring, as approvals are required by both the State Treasurer and the Director of the Michigan Department of Environmental Quality. "At all levels, the State of Michigan has been most cooperative in assisting the City of Flint as it addresses the many issues confronting the Flint water system", said Ambrose. "Access to $2.24 million at this time will be very helpful in moving forward with our action plan."

The proposed restructuring will free up funds to enable the City to more quickly begin implementing recommended improvements to its water treatment and distribution system. Several recommendations for improvement are currently unbudgeted and the $2.24 million will help assure that the most important can be performed.

Recommendations to be considered include the addition of a Granulated Activated Carbon Filter, estimated at as much as $1.5 million; acceleration of the repair and replacement of values, estimated at an additional $120,000 annually; additional pipeline replacement, estimated at $1 million per mile; and acceleration of the project to automate plant operations, estimated at $450,000. $1.315 million will become available in the City's current fiscal year, and the remaining $925,000 will be available in the next fiscal year.

The bonds are currently financed at a rate of 2.5%, and postponement of the principal payment will incur some additional interest expense over the life of the issue. While the interest rate will not increase, the total interest cost will increase by approximately 2% ($228,000) over the 20 year life of the issues.

I never understood fully why anyone thought this group would be a useful ally in this situation anyway. Instead of helping to bring understanding to their community, they have been downright detrimental to the discourse. Do rich and Dennis maintain an interest in continuing to consider them allies?

Subject: PRESS RELEASE: Flint Water Improvements

For Immediate Release

City of Flint Announces Action Plan to Maintain Safety and Improve Quality of Flint Water

Flint, Michigan – April 8, 2015 – The City of Flint is proceeding with a series of actions to ensure the continued safety of Flint drinking water is maintained and that issues of discoloration and odor continue to be addressed. Most notably, the installation of a Granulated Active Charcoal filter (GAC) at the Water Treatment Plant is expected to be authorized this week by Emergency Manager Jerry Ambrose.

The introduction of the GAC to the treatment process at Flint's plant will absorb or reduce the chemical precursors which will block or eliminate the formation of TTHM during the filtration process. Engineering and design are underway and installation of the GAC is targeted for completion by mid-July. Cost of this improvement is projected at $1.5 million and will be paid for by the proceeds from the state approved restructuring of the City's Drinking Water Revolving Fund loans.

In addition to the installation of the GAC, the City of Flint is undertaking a number of other improvements to the water system in the coming months, including a water leak detection monitoring, completion of the hydraulic model and subsequent targeted hydrant flushing program, and the replacement of two miles of water main pipe in a critical area of the city. All of these improvements scheduled to occur within the next six months.

"The replacement of this two mile section of pipe along Dupont Street has been identified by a water reliability study as a significant piece of infrastructure and will greatly improve the movement of water in that area of the

city," said Dept. of Public Works Director Howard Croft. Increasing the circulation of the water in the system will immediately result in improvements in water aesthetics, such as discoloration and odor. The MDEQ has given its approval to the project and the process of bidding for construction will begin next week. Construction will take place during the summer of this year.

Ongoing repairs and maintenance also continue to improve the health of the system. To date, about 200 water main breaks have been repaired this year. Whenever major work that may disrupt service is scheduled, the City works to notify residents in the affected area with signage and with posts to cityofflint.com. Updates will include the area of work and the estimated time of completion.

Each main break repair stirs sediments in the line. "Residents should know that there is a chance of discoloration or odor any time work is being done on a main in their area," said Croft. "This is nothing to be alarmed about and it doesn't mean the water is unsafe." If discoloration of water or odor occurs due to repairs, residents are reminded that running the water for a few minutes should clear the line. Anyone with water questions should call 810-787-6537.

The City of Flint remains committed to addressing water related issues. Along with maintaining the safety of the water, addressing quality and affordability are top priorities. The steps outlined above are indicators of the City's progress in addressing the most pressing concerns surrounding water. Emergency Manager Ambrose reiterated that development of a contract with DWSD was not going to happen.

"Those advocating for a return to DWSD do not want to recognize the financial realities of such a move. Not only would such a move increase the City's costs by more than $1million per month, but the water from Detroit is no safer than Flint water, as both entities are measured by the same MDEQ standards that have been in place for years. Why anyone would want to send a million dollars a month to DWSD rather than make necessary repairs to the City's own system is beyond me."

Further updates on the progress being made to improve Flint's water system will released in regular updates to the media and in updates to the City's website, cityofflint.com. Anyone wishing to report an issue can do so under "Online Services". Anyone with questions about these or any other water issues should call the water treatment plant at 810-787-6537.

That seems to be a part of the problem, but people don't remember having all the boil water advisories or citywide SDWA violation notices when we had Detroit water.
To answer the question though, yes, I've had city officials and consultants quoted many times on the pipes issue.
Thanks again for the responses Dave. Appreciate your help, and trying to keep to keep the coverage fair and square.

Hi Ron,

Did you get the release today from the city about the new work being done to address the issues of discoloration and odor?

The state continues to support the city in its efforts to address the long-term issues associated with its water infrastructure, including the recent $2 million in grants and $2.24 million debt restructuring that will allow a variety of projects to help with odor and discoloration issues. Administration leaders have met with Concerned Pastors members and Gov. Snyder shares their belief that all Michigan residents deserve clean, safe water. We appreciate their passion in serving their congregation members and determination in helping all the people in their city.

Subject: flint water

Hey Dave:
Seriously don't mean to constantly seeking comment, but here goes.
The Concerned Pastors for Social Action had a news conference at 1:30 p.m
It was well attended and all three TV stations were there as well.
Bottom line: Pastor Alfred Harris is again calling on the governor and the city to reconnect Flint water customers to the DWSD.
He's also said if no action is taken, there will be a meeting in one week at his church to discuss legal action to achieve the same end.
The pastors are not taking issue with the cost of renconnection but said Detroit remains the source of the best available water not withstanding the improved TTHM levels in the last round of testing.

Subject: RE: A story about the new filters?

Hey Dave:
Bryn is off but I did share your email with Kristin Longley and will likely follow up on the charcoal filter system once the purchase is complete and we have some details.
Sometimes it takes several weeks for us to see those EM resolutions after they have been signed but I will keep an eye out for sure.
If you Google Flint granulated active charcoal filter water, you'll see we've mentioned the potential for this type of system many times -- including several weeks before anyone from the city talked it about it. The news release from the city says the purchase is expected to be authorized, which isn't a lot different than we've reported up to this point.
Thanks for your help as we try to cover all side of this issue.

Subject: A story about the new filters?

Hi Ron and Bryn,

As the MLive alum on the staff, I get to field all the questions about MLive coverage. We just had a meeting and there were some questions for you.

Has there been, or will there be, a standalone story about the $1.5 million investment in the new filter system?

The concern is that when an outside attention-seeker or local agitator puts up a Facebook post, no matter how outlandish the claim, it generates a story and the subsequent social media – and we're grateful for the opportunity to comment on those.

But yesterday the city made an announcement of a tangible effort to address the issues, a true example of the state working with local leaders through restructuring the existing debt. That didn't generate a separate post, but was in a second post – we're counting the video – about the pastors threatening to sue. It wasn't mentioned in the headline, and not until the fifth paragraph. We didn't see any social media traffic on it.

Usually I can explain to the people here that MLive often spreads stories out over several posts to keep content fresh and maximize the amount of clicks. But this one has me stumped, especially on an issue that has been so well covered.

Are you guys planning a story detailing the new filter system? Or, if we've missed one, can you send me the link so I can share it with the folks here to ease their concerns?

Thanks for the help!

Dave

You probably don't want us running Treasury, Chief.

Heads up that EPA Region V Administrator Hedman (author of the letter to Kildee) is in Flint today, talking about brownfields (and getting a lot of questions about water).

Kildee appears to have been too busy to announce he got that formal reply from EPA. However, apparently a few reporters had obtained a copy of it and inquired about it when the pair were in Flint.

Attachments: Flint VN TTHM 6_9_15.pdf

Heads up, Flint is about to get another one of those letters from us. This is once again about the Total Trihalo Methanes. They remain in violation of the standard. The water is fine, but because the standard is based on the average of four quarterly tests, it takes awhile for the 'violation' status to work its way out of the numbers.

So it may get press, but it's not indicative of actual water quality violation in the present sense.

Subject: Flint Drinking Water TTHM Standard Violation - 2nd quarter 2015

Attached is a copy of the Violation Notice and Public Notice Template being mailed to the City of Flint by the DEQ Office of Drinking Water and Municipal Assistance regarding an exceedance of the Maximum Contaminant Level (MCL) standard for Total Trihalomethanes at certain locations within the City's drinking water distribution system.

This violation notice is in response to updated monitoring completed in May 2015, which shows the locational running annual average for one of the City's eight compliance sampling locations continues to exceed MCL standard of 0.080 mg/L. It is however, important to note that all individual compliance sample results collected in both May and February were below the 0.080 mg/L levels.

You are being provided an electronic copy of this notice as exceedance of this drinking water standard is expected to generate inquiries from water system customers, news media, and the general public.

Sarah Howes or Maggie Pallone will be informing members of the Michigan legislature.

If you have any questions or would like any additional information, you may contact Michael Prysby, District Engineer, DEQ-ODWMA at 517-290-8817, or you may contact me at the number below.

Stephen Busch, P.E.

STATE OF MICHIGAN
DEPARTMENT OF ENVIRONMENTAL QUALITY
LANSING DISTRICT OFFICE

RICK SNYDER
GOVERNOR

DAN WYANT
DIRECTOR

June 9, 2015

Mr. Brent Wright, Operations Supervisor
City Of Flint – Department of Public Works
Flint Water Plant
4500 North Dort Highway
Flint, Michigan 48505

WSSN: 02310

Dear Mr. Wright:

SUBJECT: Violation Notice (VN) – Maximum Contaminant Level for Total Trihalomethanes (TTHM)
2nd Quarter 2015 Monitoring Period

The Department of Environmental Quality (DEQ), Office of Drinking Water and Municipal Assistance (ODWMA), records show that the city of Flint (City) is in violation of the Safe Drinking Water Act,1976 PA 399, as amended (Act 399); R 325.10610, *Maximum contaminant levels for disinfection byproducts (MCLs)*, of the 1979 Administrative Code.

In accordance with R 325.10610, *MCL*s, of the 1979 Administrative Code, the MCL for disinfection byproduct TTHM is 0.080 milligrams per liter (mg/L) as a Locational Running Annual Average (LRAA) at each monitoring location. As listed in the table below, our records show that the City's highest TTHM LRAA, based on the last four quarters, ending June 30, 2015, is 0.094 mg/L which exceeds the standard, and at this time only one of the eight sample site locations exceed the LRAA standard of 0.080 mg/L.

Our investigation consisted of a review of ODWMA files for laboratory reports received for compliance monitoring. Our investigation is considered complete. This violation began on June 1, 2015, and will continue until the TTHM LRAA is below the MCL at all sample sites.

TTHM Results (mg/L)						
	8/21/14	11/20/14	2/17/15	5/18/15	LRAA	OEL
DBP1 McDonalds 3719 Davison	**0.145**	0.059	0.0162	0.0514	0.068	0.044
DBP2 Liquor Palace 3302 South Dort Highway	**0.127**	0.033	0.0168	0.0635	0.060	0.044
DBP3 North Flint Auto 6204 North Saginaw St.	**0.118**	0.041	0.0149	0.0452	0.055	0.037
DBP4 University Market 2501 Flushing Road	**0.196**	**0.094**	0.0245	0.0598	**0.094**	0.059
DBP5 Taco Bell 3606 Corunna Road	**0.181**	0.034	0.0151	0.0547	0.072	0.040
DBP6 Rite-Aid Pharmacy 5018 Clio Road	**0.144**	0.054	0.0192	0.0605	0.069	0.048
DBP7 Salem Housing 3216 MLK Boulevard	**0.112**	0.050	0.0285	0.0727	0.066	0.056
DBP8 BP Gas Station 822 South Dort Highway	**0.112**	0.036	0.0199	0.0461	0.054	0.037

We are encouraged by the results from the most recent round of compliance samples collected on May 18, 2015, which again show individual TTHM levels below 0.080 mg/L at all locations throughout the City's system. Operational Evaluation Reports from December 2014, February 2015, and May 2015, have identified possible causes and corrective measures for the previous elevated TTHM levels which we encourage the City to continue implementing. These modifications have likely contributed in part to the reduction in TTHM levels reported for the most recent quarter in comparison to levels in May 2014, and suggest the City may be able to achieve compliance with the TTHM standard at all sites by continuing these efforts.

Our office is currently reviewing the Operational Evaluation Report dated May 29, 2015, and will provide the City and their consultant with comments, as needed, to help address this MCL violation.

Further, the TTHM operational evaluation level (OEL) calculated in accordance with R 325.10719l, *Disinfection byproducts: operational evaluation levels*, of the 1979 Administrative Code, is now below the 0.080 mg/L operational evaluation trigger at all eight sample site locations. However, our office is requesting that an operational evaluation again be conducted incorporating the most recent sample results, given the increase in TTHM levels from February 2015 results, and that the next monitoring period of August has been identified as the City's peak month for TTHM levels. **Please provide our office with an updated Operational Evaluation Report by Monday, August 31, 2015.**

If you have any other factual information you would like us to consider regarding the violation identified in this VN, please provide them in a written response by June 23, 2015.

Administrative rule R 325.10403 of Act 399 requires that suppliers provide public notice (PN) as soon as practical, but no later than thirty (30) days after the supplier learns of this type of violation, by mail or direct delivery **and** by any other means reasonably calculated to reach customers not normally reached by mail. Enclosed is a sample PN which contains the minimum required language. The City is encouraged to include additional information regarding its response efforts to this violation. **Please notify your consumers by July 1, 2015, and send us a signed and dated copy of the notice that you issued within ten (10) days of distributing the PN**. This violation must also be included in your 2015 Consumer Confidence Report, due by July 1, 2016. The PN must be repeated every quarter until you no longer exceed the TTHM standard. Failure to issue a PN for this violation will result in a fine of at least $1,000 per event, with a maximum of $5,000 per violation.

We anticipate and appreciate your continued cooperation in resolving this matter. If you have any questions regarding this VN, please contact us at the numbers below; at prysbym@michigan.gov; or rosenthala@michigan.gov; or at DEQ, P.O. Box 30242, Lansing, Michigan 48909-7742.

IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER

City of Flint Did Not Meet Treatment Requirements

Our water system recently violated a drinking water standard. Although this incident was not an emergency, as our customers, you have a right to know what happened and what we are doing to correct this situation.

We routinely monitor for the presence of drinking water contaminants. Samples were collected for total trihalomethanes (TTHM) analysis from eight locations on a quarterly basis (August 21, November 20 of 2014, and February 17 & May 18 of 2015). The average of the results at **ANY** of the eight locations must not exceed the maximum contaminant level (MCL) for TTHMs, otherwise our water system exceeds the MCL. The standard for TTHMs is 80 micro grams per liter (µg/L). The location reporting the highest TTHM level was 94 ug/L; thus, our water system exceeds the TTHM MCL.

What should I do?

- There is nothing you need to do unless you have a severely compromised immune system, have an infant, or are elderly. These people may be at increased risk and should seek advice about drinking water from their health care providers.

- You do not need to boil your water or take other corrective actions. If a situation arises where the water is no longer safe to drink, you will be notified within 24 hours.

What does this mean?

This is not an emergency. If it had been an emergency, you would have been notified within 24 hours.

People who drink water containing trihalomethanes in excess of the MCL over many years may experience problems with their liver, kidneys, or central nervous system, and may have an increased risk of getting cancer.

What is being done?

We are currently working on solutions to correct the problem. We anticipate resolving the problem in 2015. Our most recent individual sample results were all less than the 80 µg/L standard, however since compliance is calculated using a locational running annual average (LRAA) of the most recent four quarters, we are still out of compliance with the MCL at one of eight locations.

For more information, please contact Mr. Brent Wright at 517-787-6537, or the Flint Water Plant at 4500 North Dort Highway, Flint, Michigan 48505.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

This notice is being sent to you by the City of Flint.

CERTIFICATION: WSSN: 02310

I certify that this water supply has fully complied with the public notification requirements in the Michigan Safe Drinking Water Act, 1976 PA 399, as amended, and the administrative rules.

Signature	Title	Date Distributed

Reminder to water supplier: This notice/certification must be sent to the Department of Environmental Quality.

Dave:
I'm planning to post a link to the video that I've attached from the ACLU of Michigan.
Much of the video is about Flint River water but there's a lot of it that deals with the role that emergency managers played in switching the city's water source.
I've attached a link and wanted to see if your office wants to comment.
Thanks,

Hi Ron. I trust that you are pointing out the many inaccuracies and extreme hyperbole in that video. I can give you a statement:

"Gov. Snyder believes all Michigan residents need and deserve safe, clean water, and the state government has worked closely with Flint leaders to help them with their water infrastructure challenges, which were decades in the making. That assistance includes $2 million in grants to help with pipeline leaks and other issues, which allow the city to prioritize its repairs, replacing pipes. That's part of a long-term solution to the city's needs."

Subject: FW: here's the interim report

Heads up, I just did an interview with Michigan Radio (Lindsey Smith) regarding the lead issue in Flint.

Essentially, one of the residents complained to EPA about water quality in her home, and EPA's lead expert stopped by while he was in town to take some samples. He then completed a draft report and sent it – unvetted by Region V program brass – to the homeowner. That homeowner then leaked it to the ACLU, and the ACLU has been raising hell with it. There's a link to the draft below.

The situation is that Flint is now finishing a second round of statutorily required testing to determine whether the Ph of the Flint River water is causing a problem with lead and copper (popular water line material in old homes). The issue isn't lead in the source water, but in the premise plumbing. So far, tests on 100+ homes last year and another 100 this year are showing the city in compliance with lead and water, so we can say we're not seeing a problem, but we're only 70 % done processing the samples from January – December.

Thanks to Steve Busch for a great debrief on this yesterday afternoon.

Subject: lead in flint water

Brad:
I left a message with Mike Prysby on Tuesday, Sept. 1, but wanted to reach out to you also because of stories we are working on about the extent to which lead is becoming an issue in Flint drinking water.
Today, Sept. 2, researchers at Virginia Tech posted the results on an experiment with Flint water online. The report concludes that Flint River water leaches much more lead from plumbing than does Detroit.
"On average, Detroit water is 12 times (or 12X) less corrosive than the Flint River water currently in use … This is creating a public health threat in some Flint homes that have lead pipe or lead solder," the report says.
An earlier post by the same researchers says that initial water tests show "a serious lead in water problem" in Flint, partly because Flint River water is so corrosive to pipes.
Given the state's role in oversight of the city's drinking water system through DEQ and its overall oversight by state emergency managers during the past several years, I wanted to make sure I'm reaching out to the right person to respond to this information.
Could you let me know who that is?
I expect to post the first story about the experiment today and expect the issue will be getting more attention as the VT study of 300 water test kits from Flint is completed.

Fact Sheets

Gentlemen,

Find enclosed 3 items as promised at our meeting of August 26, 2015.

1. Original Fact Sheet
   DWSD vs. KWA: 5/1/12

2. KWA Fact Sheet: 9/1/15

3. DWSD Cost of Water

Should you have any questions, do not hesitate to contact me directly at 810-287-1925.

VIA EMAIL: [redacted]

Fact Sheet
City of Flint
DWSD versus KWA

Issue: City of Flint joining Karegnondi Water Authority and leaving City of Detroit water system

Fact: Both the City of Flint and City of Detroit operate their water system via enterprise funds. The water fund does not impact either community's general fund. Leaving the water system will not impact the general fund.

Fact: The City of Flint is a suburban customer of Detroit. If Flint leaves, it only impacts the suburban customer rate, not Detroit's.

Fact: Detroit's own plan calls for (latest available estimate) $1.2 billion dollar improvements to supply redundancy to Flint. If Flint leaves, Detroit avoids this construction cost.

Fact: Detroit and DWSD have experienced bond rating decreases in recent months. If Flint leaves, DWSD avoids a new bond issue and eliminates a capital project from its master plan improving its financial outlook.

Fact: Delivering water to Flint from DWSD is expensive. If Flint leaves, DWSD can reduce its operating and maintenance costs to its contracted customers.

Fact: DWSD has a limited capacity for water treatment and delivery. If Flint leaves, the City can resell that volume to other customers.

Fact: DWSD has multiple drinking water treatment plants. Some are more expensive to operate and maintain than others. Without a commitment to Flint, its largest customer other than the City of Detroit, DWSD may choose to discontinue operation of one or more of its current facilities and realize significant cost reductions to the overall system.

Fact: Flint is not part of the DWSD sewer system. The City of Flint leaving has no impact on the sewer system.

Fact: The creation of the KWA system will create over 1,000 construction jobs in Michigan. Design and construction of the system will take 42 months from July 2012 through December 2015.

Fact: KWA is offering a fixed rate for capital to its customers. Flint joining KWA will give the City a stable rate for upwards of 20 years.

Fact: KWA will offer raw water to the region. Raw water is not enhanced with chemicals, which is undesirable to agribusiness.

Fact: The I-69 corridor/I-75 corridor crosses in Flint. Along with CN and CSX and the pipeline aerotropolis, Flint can be a major transportation center for agribusiness. KWA can provide two products for agribusiness: potable and process (raw) water, and wastewater treatment facilities.

Fact: DWSD does not serve the Thumb region. KWA with its partners will be able to serve both the population with its basic needs: drinking water and the businesses with large quantities of process (raw) water.

Fact: DWSD is the only water supplier for over 4 million residents of the state. The creation of the KWA will create a second water supply system thereby reducing the impact of terrorist attacks on water supplies. With a mutual aid agreement between DWSD and KWA, the system could complement each other.

Fact: DWSD does not provide water supply to major portions of the KWA service area. KWA will provide local municipalities in the thumb region with an alternative water supply to the Arsenic impacted well systems.

In addition, local communities can replace groundwater systems with KWA surface water system and thereby improve local groundwater levels.

The KWA system will provide fire protection service to regions currently not served.

Fact: The current DWSD water system has over 20% water loss in its system. KWA's water supply is expected to have less than a 5% water loss. KWA will provide a more effective use of the waters of the state.

Fact: KWA provides redundant water supply to Flint. Currently, DWSD only provides a single source to Flint. KWA provides multiple supply sources to Flint at a fraction of the cost.

Fact: KWA has offered to purchase excess infrastructure from DWSD. If Flint leaves, Detroit has 25 miles of watermain it no longer needs. KWA has offered to purchase the pipeline and enter into a long-term arrangement for purchase of water from DWSD.

Fact: Each incorporating municipality in KWA will pay the same rate for raw water; therefore, each community will set its own treatment standards and exert local control of the cost of water it provides to its citizens.

Fact: Lapeer and Sanilac Counties are facing depletion of their groundwater supplies.

Karegnondi Water Authority (KWA) Fact Sheet

- KWA is incorporated by the State of Michigan, comprised of the City of Flint, City of Lapeer, Genesee County, Lapeer County, and Sanilac County.

- As specified in its Articles of Incorporation, each of these constituent municipalities has one representative to the board – specifically the Mayors or their designees of the 2 cities (Flint and Lapeer), the Drain Commissioners or their designees from each of the counties (Sanilac, Lapeer, and Genesee).

- KWA will deliver raw water to customer utilities.

- Each governmental unit will still own and operate their respective treatment and distribution systems. GCDC will have no jurisdiction over the City of Flint water. Flint will have all franchise rights for sale and treatment of water from KWA within the City of Flint.

- Each community that obligates itself to the debt for construction of the KWA infrastructure pipeline, intake and pump stations, receives commensurate voting membership to the board.

- Flint's debt obligation is based on the volume as selected by the city.

- Additional members are appointed by their respective communities.

- All board members serve without compensation.

- KWA will operate with 5 to 7 full-time equivalent employees. KWA will contract its labor force.

- To date, only the City of Flint and Genesee County have bought capacity in the project.

- Once KWA water is available, each community receiving untreated Lake Huron water from KWA will pay a share of the operating costs, i.e.: electricity, labor, maintenance, and chemicals in proportion to the volume of water they receive.

- KWA has created a capacity of 60 million gallons per day (mg).

- Flint has purchased 18.0 mgd. Genesee County has purchased 42 mgd. Each purchaser pays based on their purchased capacity. The total project cost will be divided by 60 (total capacity) and each purchaser, Flint and Genesee, will pay the same price per unit.

- The operation and maintenance cost will also be charged based upon the volume purchased annually.

- If a community exceeds capacity, it must either purchase or rent capacity from a community with excess.

- There exists a 30 day rolling average, which will determine if any community exceeds purchased capacity. Water volume purchased for capacity purposes will be calculated on the basis of a 30-day average.

- Capital costs for Flint will be a flat rate of approximately $6.8 million over 30 years.

- To date, KWA is below its construction cost projection of $274 million.

- 90 percent of the KWA pipeline route is constructed along public right of ways.

- Any land required, that was outside the road right-of-way, was purchased from the original land owners, not a 3rd party short-term owner.

- All KWA construction contracts have been publically and competitively bid.

- No tax dollars, (Federal, State, or Local) are being used to fund this project. All project costs for KWA are being paid by the Flint and Genesee County water users.

Dear Mr. Woodson:

Thank you for your call on Friday.

In follow-up to your inquiry on U.S. EPA lead experts, I had a conversation with Dr. Darren Lytle, who is the Acting Chief of the Treatment Technology Evaluation Branch in the Water Supply and Water Resources Division within EPA's Office of Research and Development. Scientists within Dr. Lytle's branch have expertise in drinking water treatment including corrosion control to address lead contamination. We passed along Dr. Lytle's information to both MDEQ and Flint's Mayor, Dayne Walling, for consideration to work with Flint's Technical Advisory Committee.

You mentioned that you wanted to provide the Flint City Council with this information since Mayor Walling has not shared EPA's assistance offer with the Council. I have left a voicemail message with Councilwoman Monica Galloway regarding your inquiry since it is critical that the Council work with the City and the State to discuss next steps for the Flint Water system.

Please let me know if you have any follow-up questions.

Best wishes,

Heather

We are aware that Virginia Tech researchers are now testing water at various Flint homes for lead levels. We appreciate that Virginia Tech's team is working on this issue because it brings the public spotlight on an important fact: if you have lead water pipes or plumbing fixtures containing lead in your home, or a lead service connection to the city system, it is very likely you are ingesting some level of lead. That's just a fact. It's true whether you live in Detroit, Dowagiac or Decatur.

And in the City of Flint, that fact affects 15,000 or more residences.

However, we want to be very clear that the lead levels being detected in Flint drinking water are not coming from the treatment plant or the city's transmission lines. Treated water leaving the plant has no detectable levels of lead in it. The issue is how, whether, and to what extent the drinking water is interacting with lead plumbing in people's homes.

It does not appear the Virginia Tech research lab is certified, and we can't speak to the sampling methods being employed to achieve these results. The results reported so far fail to track with any of the lead sampling conducted by the city. In addition, the Virginia Tech results are not reflected by the blood lead level testing regularly conducted by the state department of community health that have not shown any change since Flint switched sources.

The state's compliance monitoring program requires the city to use certified laboratories and a standardized, federal testing protocol that looks specifically at the homes in communities most likely to experience lead problems. The latest results from Flint, obtained from two separate rounds of testing over the past year, indicated that Flint drinking water, meets state and federal safe drinking water standards for lead.

That said, the state has requested Flint to 'optimize' its water treatment to further limit exposure to lead from plumbing in homes. While statute allows several years for a drinking water system to actually undertake this process – Detroit took five years to complete its water optimization work – we are encouraging Flint water system operators to take these steps immediately and we are encouraged by the conversation so far.

Any resident who has concerns about lead in their drinking water should have their water tested at a certified laboratory and get professional consultation on how to address it. The leading cause of lead poisoning is known to be lead paint and, in some areas, environmental legacy hot spots where lead is present in soils. However, I will say it again: when homes are fitted with lead plumbing or plumbing fixtures containing lead, homeowners should assume there is some varied level of interaction between water and pipes that results in lead exposure.

Brad:

I left a message with Mike Prysby on Tuesday, Sept. 1, but wanted to reach out to you also because of stories we are working on about the extent to which lead is becoming an issue in Flint drinking water.
Today, Sept. 2, researchers at Virginia Tech posted the results on an experiment with Flint water online. The report concludes that Flint River water leaches much more lead from plumbing than does Detroit.

"On average, Detroit water is 12 times (or 12X) less corrosive than the Flint River water currently in use … This is creating a public health threat in some Flint homes that have lead pipe or lead solder," the report says.

An earlier post by the same researchers says that initial water tests show "a serious lead in water problem" in Flint, partly because Flint River water is so corrosive to pipes.

Given the state's role in oversight of the city's drinking water system through DEQ and its overall oversight by state emergency managers during the past several years, I wanted to make sure I'm reaching out to the right person to respond to this information.

Could you let me know who that is?

I expect to post the first story about the experiment today and expect the issue will be getting more attention as the VT study of 300 water test kits from Flint is completed.

Thanks,

Ron Fonger

Subject: RE: flint water

Ron,

As we discussed last week, the state DEQ is just as perplexed by Edwards' results as he seems to be by the city's test results, which are done according to state and federal sampling guidelines and analyzed in certified labs.

When I said we were unsure how the Virginia Tech team got its results, that's not the same as being surprised that they got them. There are a conservatively estimated 15,000 old homes with lead plumbing in Flint alone, and this group specializes in looking for high lead problems. They pull that rabbit out of that hat everywhere they go. Nobody should be surprised when the rabbit comes out of the hat, even if they can't figure out how it is done.

It's scientifically probable a research team that specializes in looking for lead in water could have found it in Flint when the city was on its old water supply. We won't know that, because they've only just arrived in town and quickly proven the theory they set out to prove, and while the state appreciates academic participation in this discussion, offering broad, dire public health advice based on some quick testing could be seen as fanning political flames irresponsibly. Residents of Flint concerned about the health of their community don't need more of that.

As I mentioned last week, the issue here isn't Flint's water source or water plants. It's the high number of older homes with lead pipes and lead service connections. Anyone with lead plumbing in their homes should recognize there's some communication of lead from that.

The state and the EPA are working together in Flint – have been from the start, and we are in regular communication with federal counterparts to discuss Flint water. The state's program has been in place, protecting community water supplies for more than 40 years around the state. The reason this conversation began is because we have lead and copper rules; the city met the state and federal standard, and has agreed to further optimize its system to even further reduce lead levels, but let's be clear: lead pipes means some lead in water, at some level. Folks who have concerns should get a

water specialist to take a look at their home and see what they need to do to achieve peace of mind, because lead and copper are home plumbing problems that no water source can eliminate entirely.

Subject: Reporter seeking a response to Virgnia Tech's Flint Water Study findings
Importance: High

Dear Mr. Wurfel,

After testing more than 250 homes in Flint, researchers at Virginia Tech have continued to find dangerously high levels of lead in many of the homes being sampled.

They are unequivocal in their findings, stating that: "Flint has a very serious lead in water problem."

These results run contrary to the city and MDEQ's assertions that the city of Flint is in compliance with U.S. EPA Lead and Copper Rule compliance standards. In fact, based on Virginia Tech's results – which are much more extensive, having tested nearly four times as many homes as the city tested during the first half of 2015, and the VT researchers have not specifically target high-risk homes, as the city is required to do for the LCR monitoring – the city is actually well out of compliance.

I was hoping you would be able to provide the MDEQ's position regarding VT researchers' purported findings, and the contradictory conclusions..

Virginia Tech's methodology and results have been posted on a web site dedicated to the project (flintwaterstudy.org/), so it is clear from their end how they have approached this project, and exactly what they've done, and what they've found.

It would be very helpful to have the MDEQ's views on all this for my upcoming story.

I am working on a deadline and would very much appreciate a response by the end of the day tomorrow, Sept. 11.

I appreciate any help you can provide in my reporting on this very important public health issue.

Sincerely,

Curt

The Honorable Rick Snyder
Governor, State of Michigan
P.O. Box 30013
Lansing, MI 48909

RE: Call for Additional Support for Flint Water Improvement Plan

Dear Governor Snyder:

On behalf of the Flint community, I am writing with a renewed request for additional support to address Flint's water challenges to ensure that water is affordable and secure for everyone in Flint especially our vulnerable populations. I am asking for an additional $30 million in funds for Flint's infrastructure and a new healthy homes initiative.

Significant progress has been made throughout this year to increase water safety and quality and I thank you for the involvement of your office, the Michigan Department of Environmental Quality, and the Michigan Department of Treasury. A majority of items in the Water Improvement Plan are completed or underway. Most importantly, Flint is now in compliance with the Safe Drinking Water Act due in large part to the installation of the new carbon filter. The infrastructure systems are being made more secure and efficient through the State grants. Now the City is committed to following the recommendation of the Michigan Department of Environmental Quality to optimize the treatment process, reduce corrosion and further minimize risks from lead.

The need to accelerate the City's capital improvement investments remains and has been further increased by the continued financial stress and legal issues. Previously I requested support for replacement or forgiveness of payment to the Drinking Water Revolving Loan Fund due to Flint's status as a distressed community and the gap in funding in the adopted capital improvement plan. I understand that the existing federal law does not allow the existing Drinking Water Revolving Loans that Flint is carrying to be forgiven in retrospect but the need still exists. Flint owes approximately $20 Million. One solution is for the State to grant a new $20 Million that is designed as forgivable from the start. Another solution is to provide

equivalent funding through an expansion of the grant program to Michigan's Financially Distressed Cities, Villages and Townships with a supplemental budget amendment in cooperation with the State Legislature.

The community's heightened concern about lead leeching into the water from old service lines and home plumbing also needs to be addressed. We know that lead is an environmental contaminant and there have been many programs in place over the years to address sources in paint and pipes. Flint needs a new healthy homes initiative specifically focused on lead in water with $10 Million to start the process of replacing service lines for the most vulnerable households. Regardless of the source and treatment of Flint's water, this long term threat of lead in pipes needs to be removed in the interest of public health.

My approach continues to be to work with you and your appointed officials, State Senator Ananich, State Representatives Phelps and Neeley, Congressman Kildee, community groups, businesses, churches, foundations, the Flint City Council, and all of the City of Flint and State and Federal government personnel. We need every available expert and resource to address Flint's water problems.

Flint's safety is my top priority. Just as the City and State have worked together on public safety, we need additional support for fixing the water problems. We need $30 Million in new funds to repair and update the city-wide infrastructure and to assist households in becoming lead-free. The entire Flint community deserves sustainable, safe, secure and affordable water now and into the future. Thank you for the consideration Governor and I look forward to future discussions.

Sincerely,

Dayne Walling
Mayor, City of Flint

RICK SNYDER
GOVERNOR

DAN WYANT
DIRECTOR

September 16, 2015

VIA E-MAIL

The Honorable Daniel Kildee
United States House of Representatives
Washington, DC 20515

Dear Congressman Kildee:

Thank you for your September 9, 2015, letter regarding your concerns for the drinking water in the city of Flint (Flint). The Michigan Department of Environmental Quality (MDEQ) is working closely with Flint's water department as well as the U.S. Environmental Protection Agency (USEPA) to ensure Flint residents have ample water that meets state and federal drinking water standards.

The MDEQ's role is to administer its nearly 40-year-old state drinking water protection program based on federal guidelines. The MDEQ works with approximately 11,500 public water systems in the state to monitor for more than 90 primary drinking water contaminants and ensure that every supply consistently provides safe drinking water.

In Flint, the city made a decision 18 months ago to switch drinking water sources. This change required them to take specific measures under the federal Lead and Copper Rule, which was enacted in 1991 to monitor water as it interacts with lead service connections and home plumbing. Flint's test results were conducted according to the same testing protocols every Michigan community uses and the same protocols Flint has used to test its water every three years for the past 25 years.

While the results from Flint's testing show compliance with the federal action level for lead and copper, on August 17, 2015, the MDEQ instructed the city to move forward expeditiously with developing additional corrosion control treatment to minimize the corrosive effects between drinking water and lead service connections and home plumbing in the Flint service area.

We appreciate and share your concern for the situation, and the MDEQ looks forward to providing you a detailed briefing next week. If you have any additional questions in the meantime, please contact Ms. Maggie Pallone, Deputy Director, Policy and Legislative Affairs, at 517-284-6704 or pallonem@michigan.gov; or you may contact me.

The Honorable Phil Phelps
State Representative
State Capitol
P.O. Box 30014
Lansing, Michigan 48909-7514

Dear Senator Ananich and Representatives Neeley and Phelps:

Thank you for your letter of September 10, 2015, regarding water quality in the city of Flint (City). Your interest in this matter is appreciated. The Michigan Department of Environmental Quality (MDEQ) takes seriously its responsibility to ensure safe drinking water for all Michigan residents. The MDEQ maintains a robust public water supply regulatory program through long-standing partnerships with the United States Environmental Protection Agency (USEPA) and the state's regulated public water systems.

With respect to the draft memo referenced in your letter, the MDEQ does not review or receive draft memos from the USEPA, nor would we expect to while it is a draft.

Regulations associated with lead, copper, and corrosion control require communities to monitor water quality at customer taps. The monitoring protocols for sampling home water attempt to represent actual home water use, and they allow the MDEQ to get consistent results for year-over-year comparisons.

It is important to recognize that any home with lead plumbing or service connections will impart some amount of lead to water samples. While the compliance monitoring for lead in the City has not exceeded the federally-established Action Level, either before or after the City switched sources and treatment methods, there has always been

detectable lead in the City's water sampling program for homes that have lead plumbing or service connections. The City's monitoring program's purpose is to show aggregated levels throughout the entire system, not individual home levels.

The law requires the City to provide individual lead results to customers whose homes are sampled for compliance with the Action Level. Each customer with an individual sample result that exceeds 15 parts per billion is provided information on actions they can take to limit lead exposure in their drinking water. System-wide results from the most recent lead compliance monitoring are included each year in the City's annual Consumer Confidence Report, which is provided to customers and available online.

It is important to note that the City performed extensive home water tests for lead and copper last year and this year, and is meeting state and federal drinking water standards. Local health departments also administer annual blood level testing on children in Flint; results show no discernable rise in levels that might be expected if there was an elevated lead level in the City water supply. The City currently has no unresolved violations of state and federal drinking water standards.

The MDEQ continues to work with the City and federal regulators on the shared goal of ensuring safe, reliable drinking water in this community.

I look forward to discussing this issue in greater detail at the meeting next week. If you should have additional questions before then, please contact Ms. Maggie Pallone, Deputy Director, Policy and Legislative Affairs, at 517-284-6715 or pallonem@michigan.gov; or you may contact me.

Sincerely,

Dan Wyant

Congressman Dan Kildee Calls For Additional "Independent and Scientific" Testing to Ensure Safety of Flint's Water

FLINT – Congressman Dan Kildee (MI-05) today, as part of his continued efforts to get answers regarding recent lead levels recorded in the city of Flint's water system, met with the Michigan Department of Environmental Quality (DEQ) and the Environmental Protection Agency (EPA) in Lansing.

The meeting followed a letter sent last week by Congressman Kildee posing various questions about recent lead levels in the water. In response to Congressman Kildee's letter, the DEQ and EPA invited Congressman Kildee and other local, state and federal elected officials to attend today's briefing in Lansing.

After the meeting today, Congressman Kildee issued the following statement:

"After meeting with the EPA and DEQ, it is clear to me that immediate independent and scientific testing is necessary to determine the safety of Flint's water. So far, the city, DEQ and EPA have not adequately answered my questions on their testing methods to ensure the safety of Flint's water.

"So far, I have been given no reason to have confidence in the current testing results. For example, it is unclear if homes sampled also took part in previous tests, which could have shown trends in water quality.

"I call on the Michigan Department of Environmental Quality and the Environmental Protection Agency, in coordination with the city of Flint, to work together to conduct additional independent and scientific testing of Flint's water. Additional testing must be expanded from its current scope to include more homes. It must also factor in the most at-risk homes in Flint.

"Flint residents deserve absolute transparency when it comes to the quality of their water. Additionally the city, DEQ and EPA must work together to ensure the immediate safety of Flint's drinking water, including any temporary relief until a long-term solution can be completed."

To: 'Ronald Fonger'
Subject: RE: STATEMENT: Congressman Dan Kildee Calls For Additional "Independent and Scientific" Testing to Ensure Safety of Flint's Water

"The state much appreciated the opportunity to explain its role in regulating drinking water systems – in particular, the fact that the water supply presently meets all state and federal water quality standards but that homes with lead service connections and lead plumbing are and always have been imparting some part-per-billion of lead, which is a concern.

"We were pleased to conclude the meeting with the shared commitment to bring a local, state and federal partnership to address this issue through the City's technical advisory team. Given issues like the proposed federal grant forgiveness or the call for system-wide replacement of home lead connections to address the long-term issue, the leadership of our congressional delegation will be of critical importance."

Congressman Dan Kildee Calls For Additional "Independent and Scientific" Testing to Ensure Safety of Flint's Water

FLINT – Congressman Dan Kildee (MI-05) today, as part of his continued efforts to get answers regarding recent lead levels recorded in the city of Flint's water system, met with the Michigan Department of Environmental Quality (DEQ) and the Environmental Protection Agency (EPA) in Lansing.

The meeting followed a letter sent last week by Congressman Kildee posing various questions about recent lead levels in the water. In response to Congressman Kildee's letter, the DEQ and EPA invited Congressman Kildee and other local, state and federal elected officials to attend today's briefing in Lansing.

After the meeting today, Congressman Kildee issued the following statement:

"After meeting with the EPA and DEQ, it is clear to me that immediate independent and scientific testing is necessary to determine the safety of Flint's water. So far, the city, DEQ and EPA have not adequately answered my questions on their testing methods to ensure the safety of Flint's water.

"So far, I have been given no reason to have confidence in the current testing results. For example, it is unclear if homes sampled also took part in previous tests, which could have shown trends in water quality.

"I call on the Michigan Department of Environmental Quality and the Environmental Protection Agency, in coordination with the city of Flint, to work together to conduct additional independent and scientific testing of Flint's water. Additional testing must be expanded from its current scope to include more homes. It must also factor in the most at-risk homes in Flint.

"Flint residents deserve absolute transparency when it comes to the quality of their water. Additionally the city, DEQ and EPA must work together to ensure the immediate safety of Flint's drinking water, including any temporary relief until a long-term solution can be completed."

Senator Ananich has formed a new coalition to speak on the water issues in Flint. Hurley hospital will be a member of that coalition. This coalition may be competitive with the existing Clean Water Coalition where a lot of the grassroots types participate. Hurley will also work to get more residents water filters, and that may be apart of the announcement today.

Blood Lead Levels in Flint Talking Points
September 24, 2015

- The results of the Hurley Children's Hospital are under review by the Michigan Department of Health and Human Services.
- The analysis that Hurley conducted is different from the way MDHHS has analyzed data regarding blood lead levels in Flint.
- MDHHS is looking to see if we can replicate the results of the Hurley study to see how they achieved their results.

Differences in Analysis

- MDHHS data provides a much more robust picture of the entire blood lead levels for the Flint area, and specifically, accounts for data over the full course of the past five years.
- Looking at the past five years as a whole provides a much more accurate look at the seasonal trends of lead in the area.
- Seasonal exposure is higher in the summer for a variety of reasons including children playing outside in the soil, and when windows are open and lead paint is more likely to be in the air. This seasonal increase would be unrelated to the water system.
- Our data includes children from the entire city, including all medical facilities, rather than just Hurley, has a larger age group of children, and includes a much larger sample size.
- The MDHHS analysis looks specifically at the first elevated blood lead level for each child, which provides an accurate picture of when first exposure occurred.
- The Hurley data includes a smaller sample size, much more limited time period (January-September of 2013 and 2015 only), and a smaller age group of children.

WIC Children

- In homes with infants on WIC, if the household has documentation from an official source of unsanitary water supply issues, that family may be eligible to receive ready-to-feed formula. Families should contact WIC to see if they are eligible.
- Each household would have to be looked at on an individual basis.
- WIC cannot cover bottled water.

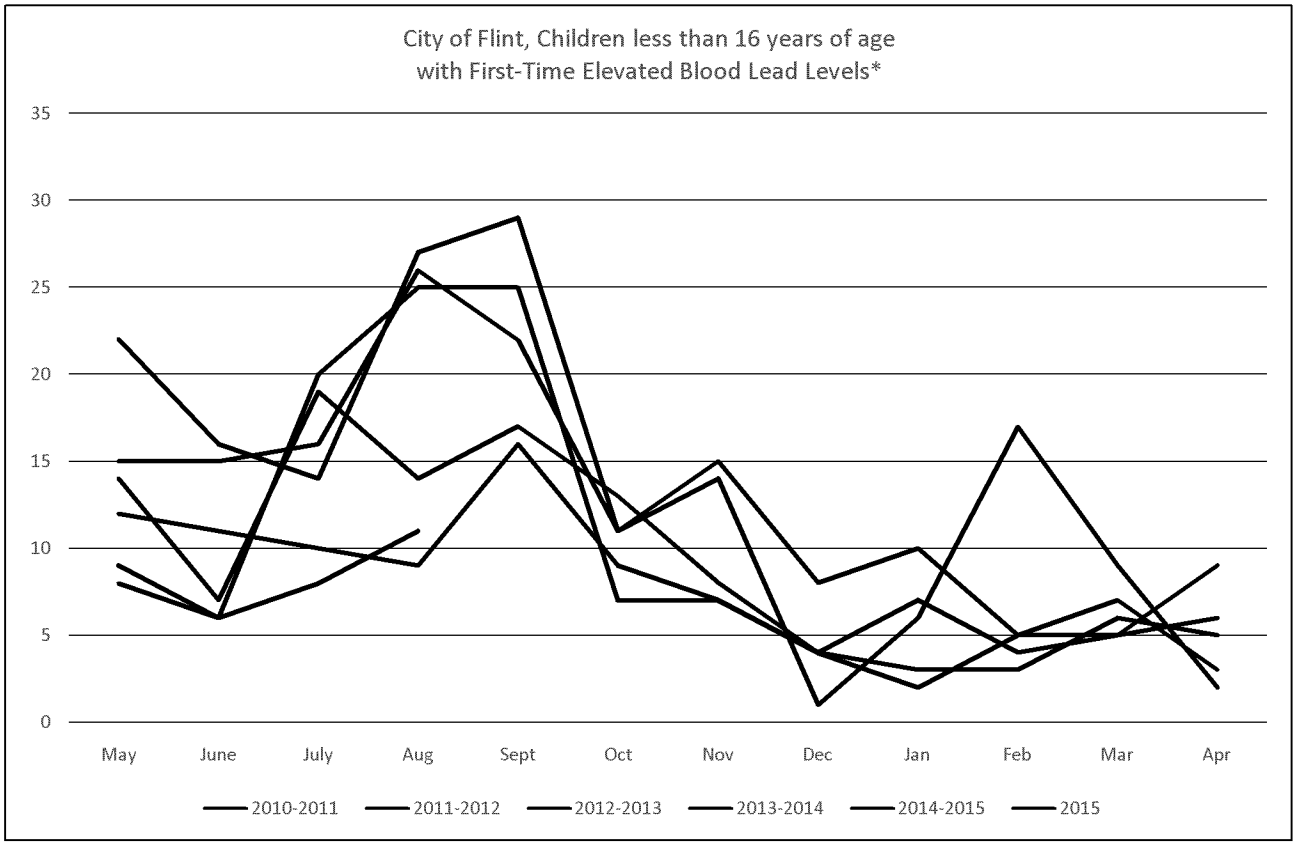
Blood Lead Testing of Children in Flint, Before and After the Change in Flint's Water

- The change in Flint's water source occurred in April 2014. MDHHS looked at children's blood lead levels (BLL) before and after this event.
- The dark blue line (May 2014 – April 2015) and the green line (May-August 2015) reflect children's blood lead tests after the change. All other lines reflect tests before the change.
- An increase in childhood lead poisoning in summer (July, August, September) is typical throughout Michigan every year.
- While there is a dramatic difference between the numbers of elevated BLL in the summer before and after the event, a wider look that includes data back to 2010 shows that the year BEFORE the event (the yellow line) was more of an anomaly than the year after (the dark blue line).
- If elevated BLL were being driven by the change in water, we would expect the dark blue line to stay high rather than follow the seasonal pattern.
- All data included in this analysis were reported by laboratories directly to MDHHS, in accordance with State law.



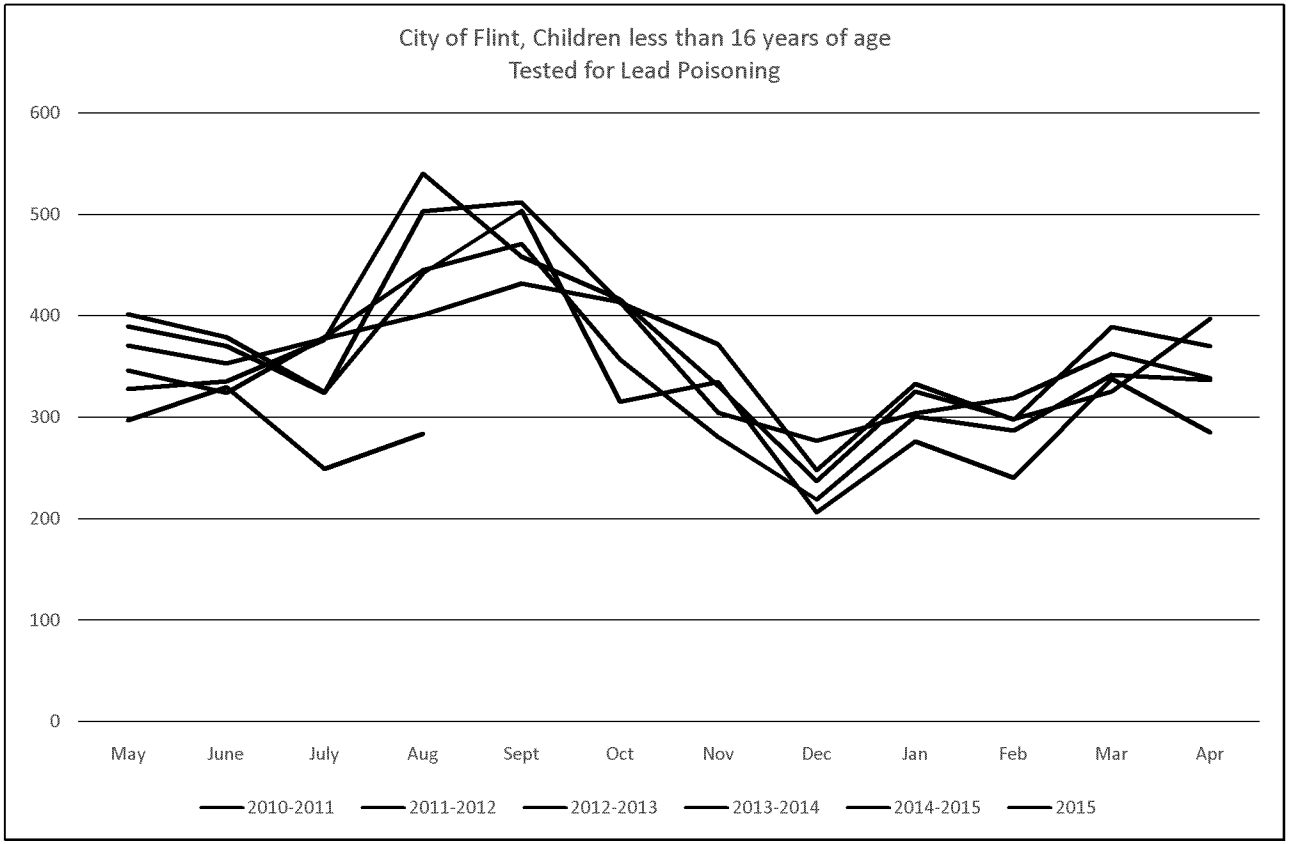
*This graph includes:
Children whose address is listed as "Flint"--may not conform exactly to Flint city limits
Children less than 16 years of age at time of test
Only first-time blood lead levels >= 5 ug/dL
All first-time elevated levels, regardless of sample type (venous, capillary or unknown)

September 24, 2015

Source: MDHHS Data Warehouse, Lead Specimen table

Blood Lead Testing of Children in Flint, Before and After the Change in Flint's Water

- Blood lead testing (regardless of elevated levels) also tends to rise during late summer (August, September, October).
- This graph shows that testing in Flint has remained fairly steady over the last five years, except for a recent decline(May – August 2015).



*This graph includes:

Children whose address is listed as "Flint"--may not conform exactly to Flint city limits

Children less than 16 years of age at time of test

The number of children tested within each month.

Some children are tested more than once, and may be included in more than one month or year.

September 24, 2015

Source: MDHHS Data Warehouse, Lead Specimen table

Blood Lead Levels in Flint Talking Points
September 24, 2015

- Promoting the health of our residents is a statewide priority – a priority that includes ensuring clean, safe drinking water for all residents and especially children.
- The results of the Hurley Children's Hospital are under review by the Michigan Department of Health and Human Services.
- The analysis that Hurley conducted is different from the way MDHHS has analyzed data regarding blood lead levels in Flint.
- MDHHS is looking to see if we can replicate the results of the Hurley study to see how they achieved their results.

MDHHS Blood Lead Testing Results in Flint

- MDDHS data shows a comprehensive look at the data since 2010, years before the change in Flint's water source occurred in April 2014.
- Each year shows a seasonal increase in childhood lead poisoning in the summer months, the highest seasonal increase of which occurred in 2010.
- All data included in the MDHHS analysis were reported by laboratories directly to MDHHS, in accordance with State Law.

Differences in Analysis

- MDHHS data provides a much more robust picture of the entire blood lead levels for the Flint area, and specifically, accounts for data over the full course of the past five years.
- Looking at the past five years as a whole provides a much more accurate look at the seasonal trends of lead in the area.
- Seasonal exposure is higher in the summer for a variety of reasons including children playing outside in the soil, and when windows are open and lead paint is more likely to be in the air. This seasonal increase would be unrelated to the water system.

Subject: Flint Water

Flint doctors from Hurley, etc., today are holding a news conference to urge Flint to stop using Flint River water ASAP because of alarming lead levels in kids. This is based on blood tests taken since January.

As you know, water quality has been a big issue in Flint, although officials, including DEQ, say lead levels are within limits. Now, doctors are speaking up and saying it's a public health crisis.

What is the governor's reaction? Should Flint stop using the water?

Thanks.

Blood Lead Levels in Flint Talking Points
September 24, 2015

- Promoting the health of our residents is a statewide priority – a priority that includes ensuring clean, safe drinking water for all residents and especially children.
- The results of the Hurley Children's Hospital are under review by the Michigan Department of Health and Human Services.
- The analysis that Hurley conducted is different from the way MDHHS has analyzed data regarding blood lead levels in Flint.
- MDHHS is looking to see if we can replicate the results of the Hurley study to see how they achieved their results.

MDHHS Blood Lead Testing Results in Flint

- MDDHS data shows a comprehensive look at the data since 2010, years before the change in Flint's water source occurred in April 2014.
- Each year shows a seasonal increase in childhood lead poisoning in the summer months, the highest seasonal increase of which occurred in 2010.
- If elevated blood lead levels were being driven by the change in water, we would expect to see the elevated levels remain high after the change in water source, rather than follow the seasonal pattern as they did by decreasing in the fall months.
- All data included in the MDHHS analysis were reported by laboratories directly to MDHHS, in accordance with State Law.

Differences in Analysis

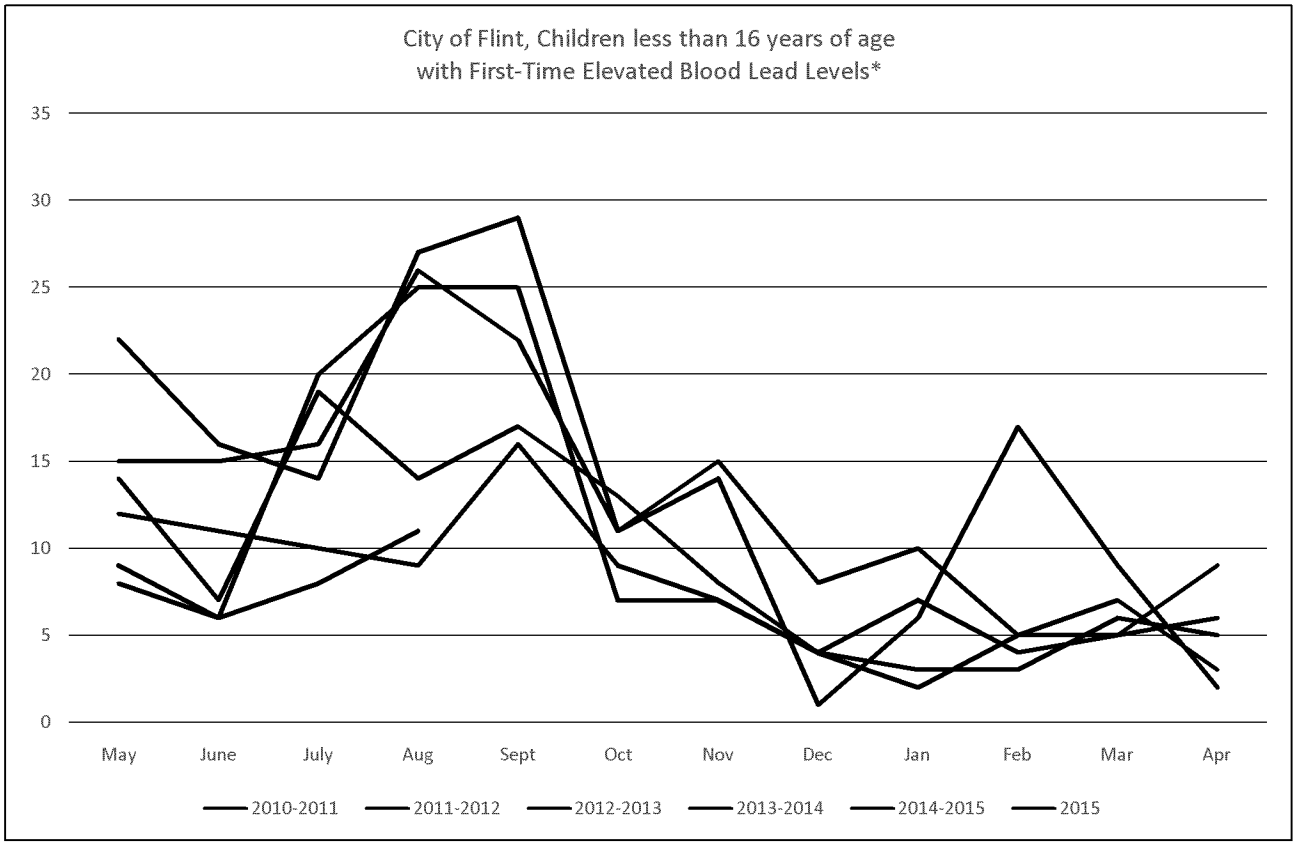
- MDHHS data provides a much more robust picture of the entire blood lead levels for the Flint area, and specifically, accounts for data over the full course of the past five years.
- Looking at the past five years as a whole provides a much more accurate look at the seasonal trends of lead in the area.
- Seasonal exposure is higher in the summer for a variety of reasons including children playing outside in the soil, and when windows are open and lead paint is more likely to be in the air. This seasonal increase would be unrelated to the water system.
- Our data includes children from the entire city, including all medical facilities, rather than just Hurley, has a larger age group of children, and includes a much larger sample size.
- The MDHHS analysis looks specifically at the first elevated blood lead level for each child, which provides an accurate picture of when first exposure occurred.
- The Hurley data includes a smaller sample size, much more limited time period (January-September of 2013 and 2015 only), and a smaller age group of children.

WIC Children

- In homes with infants on WIC, if the household has documentation from an official source of unsanitary water supply issues, that family may be eligible to receive ready-to-feed formula. Families should contact WIC to see if they are eligible.
- Each household would have to be looked at on an individual basis.
- WIC cannot cover bottled water.

Blood Lead Testing of Children in Flint, Before and After the Change in Flint's Water

- The change in Flint's water source occurred in April 2014. MDHHS looked at children's blood lead levels (BLL) before and after this event.
- The dark blue line (May 2014 – April 2015) and the green line (May-August 2015) reflect children's blood lead tests after the change. All other lines reflect tests before the change.
- An increase in childhood lead poisoning in summer (July, August, September) is typical throughout Michigan every year.
- While there is a dramatic difference between the numbers of elevated BLL in the summer before and after the event, a wider look that includes data back to 2010 shows that the year BEFORE the event (the yellow line) was more of an anomaly than the year after (the dark blue line).
- If elevated BLL were being driven by the change in water, we would expect the dark blue line to stay high rather than follow the seasonal pattern.
- All data included in this analysis were reported by laboratories directly to MDHHS, in accordance with State law.



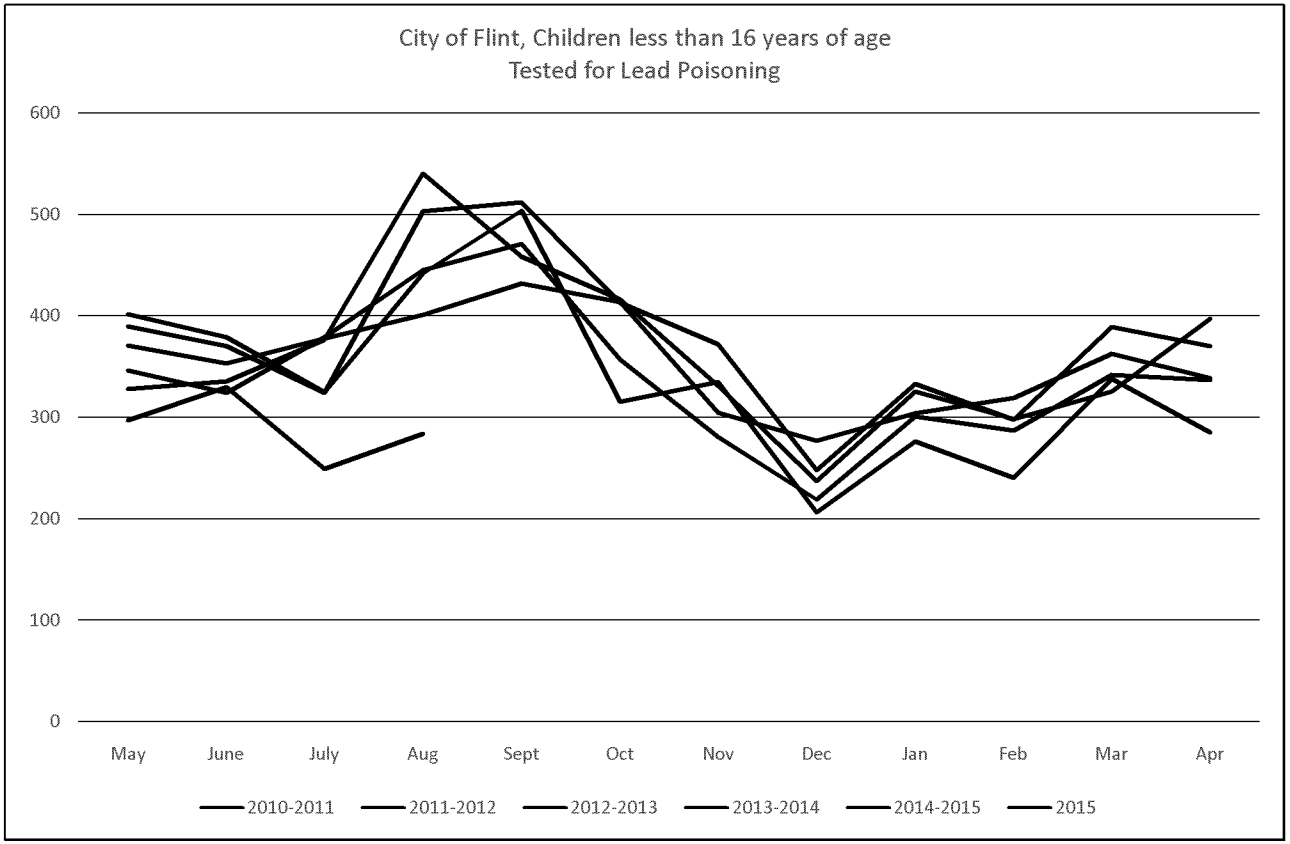
*This graph includes:
Children whose address is listed as "Flint"--may not conform exactly to Flint city limits
Children less than 16 years of age at time of test
Only first-time blood lead levels >= 5 ug/dL
All first-time elevated levels, regardless of sample type (venous, capillary or unknown)

September 24, 2015

Source: MDHHS Data Warehouse, Lead Specimen table

Blood Lead Testing of Children in Flint, Before and After the Change in Flint's Water

- Blood lead testing (regardless of elevated levels) also tends to rise during late summer (August, September, October).
- This graph shows that testing in Flint has remained fairly steady over the last five years, except for a recent decline(May – August 2015).



*This graph includes:

Children whose address is listed as "Flint"--may not conform exactly to Flint city limits

Children less than 16 years of age at time of test

The number of children tested within each month.

Some children are tested more than once, and may be included in more than one month or year.

That's fine. Everything I have seen so far from the state has been pre-switch so I'm interested specifically in what the data is showing since the switch to the Flint River.
I'm also reaching out to you specifically to see if the governor would intervene to help Flint reconnect to the Detroit water system as the study that will be discussed at 3 p.m. recommends that.

Thanks,

Subject: Flint info

Dave…

See below…from TPs developed last spring. Calling you momentarily..

The City has received significant financial assistance through both grant programs and bond restructuring initiatives administered by the MI Department of Treasury. This financial assistance has allowed the City to replace miles of aged pipeline and begin efforts to install a specialized filter at the Water Treatment Plant.

In February, Flint was awarded a total of $2 million through two *Financially Distressed Cities, Villages, and Townships Grants*. $1.1 million was awarded for water system enhancements through improved waste management while $900,000 was awarded for water system enhancements through leak detection and pipe assessments.

On April 8th, the City announced that it was moving forward with a series of actions to ensure the continued safety of Flint drinking water and address issues of discoloration and odor. The most significant step will be the installation of a Granulated Active Charcoal filter (GAC) at the Water Treatment Plant. The GAC filter will help block or eliminate the formation of TTHM during the filtration process. The $1.5 million project (targeted for completion by mid-July) will be funded with proceeds from the state-approved restructuring of Flint's Drinking Water Revolving Fund loans ($2.24 million).

The City is undertaking a number of other improvements to the water system including the acceleration of valve replacements, targeted hydrant flushing, the replacement of two miles of water main in a critical area of the city, and acceleration of the project to automate plant operations.

Subject: Questions About Flint Water

Hello! Below are the questions I'm requesting. It pertains to recent findings by Virginia Tech University and physicians at Hurley Medical Center that show elevated levels of Lead in the water. Particularly unsafe levels found in children's bloodstream in Flint. Both are blaming Flint River water as the cause for these levels. As they were compared to Lead blood levels in children prior to switching from the Detroit Water System to the Flint River.

1 - When the City of Flint switched from the Detroit Water system to the Flint River under the leadership of Darnell Earley, what was the thought process or reasoning behind that?

2 - What kind of specific analysis was done before making those decisions. Not speaking to the financial analysis but rather the scientific study of what switching sources could potentially mean?

3 - There has been a big push from residents, nationally renown scientists and now the medical community to switch back to The Detroit Water System because it is less corrosive. In turn, reducing the amount of Lead in the system due to the highly corrosive Flint River Water. What would it take to do so given that under PA 436 the decision made under Earley cannot be reversed?

4 - Has he Governor been in contact with City of Flint officials regarding this matter?

5 - Flint Mayor Dayne Walling has requested financial support from the state in helping with what some are calling a Lead crisis. Is that something the Governor is considering? Given that the decision to switch off of Detroit was under the backing of the Department of Treasury i.e. Darnell Earley.

Thanks!

Subject: flint river

Hi Dave/Brad:
Mayor Walling said today that at his meeting with DEQ Monday there was discussion of switching Flint back to Detroit water.
He said Director Dan Wyant specifically discussed the possibility but Walling would not characterize what Wyant said on Monday or what his position was on such a shift.
The mayor said today he believes use of the Flint River presents "an increased risk" of elevated lead levels because of the corrosiveness of the water.
He said it would take the support of the governor to change the water source back to Flint. He described discussions about reconnecting to Detroit as ongoing.
You may have seen these comments as we live streamed the news conference on MLive.
I'm interested in the director's position on the potential for reconnecting Flint to Detroit water but especially the governor'sposition given the mayor's comments today.
Thanks for your help. I have about two hours before I need to get this posted.

Ive got some context. He was referring specifically to the final order from Jerry Ambrose that said the EM's actions couldn't be undone immediately by the mayor or council.
Walling said the governor would need to support such changing an action of the former EM.
Also, while walling said reconnection with Detroit is part of the discussion with the state, he did not say he will ask the governor to do it.
He said after the news conference that he has no plans to make the request but said it has been part of ongoing discussions.

Thanks for the insight. That helps! I'm sure Brad filled you in on the Wyant conversations.

The governor and state agencies continue to work with city and community leaders on a variety of approaches to help residents and ensure they have clean, safe water. It's important that residents have access to accurate information, and know where they can get their homes tested and have access to medical tests that will ease their minds. Both the Department of Environmental Quality and the Department of Health and Human Services are working closely with the city and evaluating data to assist the Flint leaders as they make decisions for their city moving forward.

Hi Drew,

Always nice talking to you!

Changing back to the Detroit water, should that be an available option, might not have the effect that some in the community believe it will have.

The governor and the state agencies have played a highly visible role in working with Flint city leaders with their infrastructure challenges -- and will continue to do so. We understand why people are frustrated, and also want to make sure people have accurate information and know where they can go if they have questions about their health and the water connections in their home. The health and safety of Flint residents is always the first priority, and that includes ensuring there is clean, safe drinking water -- especially for children.

The state so far has provided $4.2 million in grants and restructured financing to help the city locate and fix some of the problems with its water infrastructure and add the carbon filtration system. Several state agencies continue to work with Flint leaders on their water challenges including through Mayor Walling's technical advisory board. That board includes outside experts and members will study data and offer recommendations. The Department of Environmental Quality and the Department of Health and Human Services also are testing water and working with Flint residents on issues related to what they can do if they have concerns about the pipes in their homes.

The health and safety of Flint residents is always the first priority, and that includes ensuring there is clean, safe drinking water -- especially for children.

The state so far has provided $4.2 million in grants and restructured financing to help the city locate and fix some of the problems with its water infrastructure and add the carbon filtration system. Several state agencies continue to work with Flint leaders on their water challenges including through Mayor Walling's technical advisory board. That board includes outside experts and members will study data and offer recommendations. The Department of Environmental Quality and the Department of Health and Human Services also are testing water and working with Flint residents on issues related to what they can do if they have concerns about the pipes in their homes.

> Hi Sara - A little confused by your response. Not sure if Darnell Earley was EM when the decision was made to use Flint River -- It may have been Michael Brown? He was EM when the decision was made to join the KAregnondi Water Authority but I'm not sure about the decision to switch to Flint River water and stop using DWSD, but regardless, he's an EM appointed by the governor -- but I'm unclear why you guys would sign off on something as important about the integrity of an entire city's water supply if you had "severe reservations"? Any light you could shed on that would be much appreciated.

Subject: Re: Flint water

Just so you know ... that's not accurate history, Nancy. This change was pushed and direct request of Genesee Co Board of Commissioners AND city council (7-1) and mayor at the time. We had severe reservations about switch but ultimately was nearly unanimous request from local local level that Treasury signed off on. (And FYI double checking, but nearly certain EM at time was not Darnell E.)

Not that any of that matters, Nancy.
The bottom line is that we have been working hard to do everything possible to play a supportive role and work in collaborative fashion across all levels of government with community, faith & business leaders, residents, etc.

Protecting public health is paramount and safe, clean, accessible drinking water is essential. That's what we solely focused on helping ensure.

Highly recommend you reach out to state Health & Human Services team for how this data set was spliced and diced. That's key to understanding. They can walk through for you and Freep team.

Thanks much,
SW

Subject: Free Press Request for Comment from DE on Flint Water-RESPONSE FOR REVIEW

Importance: High

Sara, Dave, Terry,

Mr. Earley got a request from Freep's Nancy Kaffer for a comment on the Flint Water situation. She is doing a column for Sunday's paper that is a follow up to the paper's story that ran yesterday on Flint water quality.

She asked for his comment, she said, since water system decisions were made under his term as EM.

The following is the statement that he would like to send to Nancy. Her deadline is, as always, rapidly approaching. Apologies for short turn-around time.

"The decision for Flint to join the Karegnondi Water Authority and to leave the Detroit Water and Sewerage System was made under the authority of previous Flint Emergency Managers prior to my appointment in October 2013. And, while the deal to sell the pipeline had been in process as I assumed my position, it was finalized after thorough review and with the health and well-being of all citizens -- from small children to senior citizens and everyone in between -- taken into consideration. An even bigger concern that we must all be paying attention to is the aging infrastructure and water distribution systems in all of our urban communities -- many of which are more than 100 years old. Where the focus should be placed moving forward is not on what we do in the interim between now and when the new system is complete, but what is done in the long-term to replace the crumbling water distribution system that exits throughout Flint and Genesee County. Iam confident that the city of Flint is following the standards of the State of Michigan's Department of Environmental Quality for safe water compliance, as it should."

Please let me know if you have any issues/edits.

Thanks,

Michelle

Sara and Dave...

Below is my proposed response to Nancy...with which I intend to include 3 documents. Please confirm you are ok with this as it won't necessarily paint DWSD in a favorable light.

Please advise asap. I will send the 2 additional letters under separate emails.

"Nancy...

I am sending you a series of documents (3) to help frame the situation regarding Flint water.

The first is a letter Flint officials sent to DWSD in June of 2012, requesting that Flint be allowed to "blend" DWSD water with Flint river water to keep costs for Flint reasonable and affordable. Please note that DWSD was increasing rates by 5-times.

The second letter (Sept. 2012) from the city of Flint to the DWSD again requests written approval for the city to "blend" water, as requested in the June letter.

These letters were sent to DWSD as Flint officials, including the Mayor and city council, considered a move to KWA vs staying with DWSD.

In April of 2013, Flint received the 3rd document, from DWSD, terminating the contract with Flint effective April 17, 2014.

It is my understanding that the City of Flint then worked over the next number of months to upgrade its water facilities, test those facilities for quality and efficient water supply to residents and to gain Department of Environmental Quality approval to use Flint River water until KWA was operational in the spring of 2016.

Given DWSD's decision to terminate Flint's contract...and given that the Flint River had long been the city's backup source, Flint was faced with limited options."

The governor and the state agencies have played a highly visible role in working with Flint city leaders with their infrastructure challenges -- and will continue to do so. We understand why people are frustrated, and also want to make sure people have accurate information and know where they can go if they have questions about their health and the water connections in their home. The health and safety of Flint residents is always the first priority, and that includes ensuring there is clean, safe drinking water -- especially for children.

The state so far has provided $4.2 million in grants and restructured financing to help the city locate and fix some of the problems with its water infrastructure and add the carbon filtration system. Hi Sara and Dave,

I asked the Governor some questions about this in the Detroit scrum this morning. He told me everybody is still working on it, no specifics,waiting on "getting all the facts," but something should be announced this week.

I do understand that, but it does raise a couple of other question in the meantime:

--What "facts" are you still trying to get? What, specifically, is the factual dispute here at this point?
--Even if we don't have specifics yet, how much responsibility do the Governor and state ultimately bear for fixing the whole problem? Especially since the city had an EM when the water switch was made?

Thanks so much,

Sarah

Hi Dennis,

Senator Ananich began drafting the attached letter on Sunday and thought it would be helpful to guide our 12pm call.

Thanks,

Andy

SENATE MINORITY LEADER
JIM ANANICH

517.373.0142
senjananich@senate.michigan.gov
senatedems.com/ananich

September 28, 2015

State of Michigan
Executive Office of the Governor
P.O. Box 30013
Lansing, MI 48909

Governor Snyder,

Access to safe, affordable drinking water is a basic necessity for every community. It is completely unacceptable that respected scientific experts and our trusted local physicians have verified that the City of Flint's drinking water is dangerous for our citizens, especially our most vulnerable young people.

As a result, I am formally requesting assistance as suggested by the experts on the frontline of this public health crisis. Here are the top priorities we should work together to address:

1. **Swift transfer to a safe source of water until the Karegnondi Water Authority (KWA) project is complete next year.** Your administration has the ability to ensure a financially acceptable and responsible contract between Flint and the Detroit Water and Sewerage Department, particularly in light of the public health implications with the Flint River supply.

2. **Equally urgent is the need for corrosion control as recommended by independent scientific experts.** There are chemical treatment additives that could help reduce this corrosion. I urge you to help the city implement anti-corrosion methods immediately. The current emergency makes the January timeline unacceptable.

3. **Filters and bottled water assistance.** Flint water touches the entire city. Whether it's a person's home, work, school, restaurant or place of worship, access to safe, clean drinking water should not be hindered. Water filters, used in conjunction with corrosion control methods, are necessary to help guard against toxic exposure.

   I have been working with the philanthropic community and private sector to secure donations to acquire filters and water; however, more funds will be necessary to effectively cover the thousands of residents impacted. I would like to formally request emergency funding to help supplement the acquisition of water filters and bottled water. Any and all appropriate state or federal money to help accomplish this feat should be considered.

SENATE MINORITY LEADER
JIM ANANICH

517.373.0142
senjananich@senate.michigan.gov
senatedems.com/ananich

4. **Support for completion of the KWA pipeline.** It is presumed that the upcoming KWA pipeline will solve a number of problems associated with the current sourcing of Flint's water from the Flint River. I am requesting a meeting between representatives from your office, KWA board members and project engineers to discuss any options to expedite the pipeline's construction.

5. **A long-term commitment to addressing outdated infrastructure.** A recent EPA report just outlined the billions of dollars necessary over the next several decades to adequately secure safe water for our entire state. You have the position and opportunity to be a national leader on moving the debate forward on this topic so that we can avoid the type of catastrophe my community is grappling with today.

I look forward to working with you to deliver on these concrete and urgent action items to alleviate the public health crisis facing our residents.

We jeopardize any progress and comeback for our cities and state if we cannot ensure safe, basic necessities for our families or if we cannot come together swiftly to fix an identified, severe threat to the safety of our people.

Sincerely,

Jim Ananich
Senate Democratic Leader
District 27

To: Murray, David (GOV)
Subject: seeking comment on ananich

Dave:
We just received this and understand the governor also spoke to Congressman Kildee today about the potential for state funding for lead clearing water filers.

As you see, Ananich is asking for strong consideration of switching back to the Detroit water source.

I'm interested in a comment from your office on these two suggestions, particularly the Detroit water switch since Ananich has put this in writing and a grass roots group that includes local pastors asked for the same thing in a news conference this morning.

Thanks,

Senate Minority Leader Jim Ananich (D-Flint) issued the following statement:

"My constituents and I believe the state must act urgently to provide concrete solutions to the public health crisis in the City of Flint. In speaking with Governor Snyder and his key aides today, I stressed the need to work together on a number of initiatives that will ensure safe water for Flint residents.

"My formal request included immediate and long-term solutions, including strong consideration for switching back to the Detroit water source until the Karegnondi Pipeline Authority project is complete. Anything less than an aggressive, comprehensive approach is simply unacceptable."

A copy of Senator Ananich's letter to Governor Snyder can be viewed here.

Subject: Flint water

Hi Nick,

Gov. Snyder believes all state residents to have access to clean, safe water.
The governor and the state agencies have played a highly visible role in working with Flint city leaders with their infrastructure challenges -- and will continue to do so. We understand why people are frustrated, and also want to make sure people have accurate information and know where they can go if they have questions about their health and the water connections in their home. The health and safety of Flint residents is always the first priority, and that includes ensuring there is clean, safe drinking water -- especially for children.
The state so far has provided $4.2 million in grants and restructured financing to help the city locate and fix some of the problems with its water infrastructure and add the carbon filtration system. Several state agencies continue to work with Flint leaders on their water challenges including through Mayor Walling's technical advisory board. That board includes outside experts and members will study data and offer recommendations. The Department of Environmental Quality and the Department of Health and Human Services also are testing water and working with Flint residents on issues related to what they can do if they have concerns about the pipes in their homes.
It's important to remember that the emergency manager had the final say on making the change, but did so at the strong urging of Flint city leaders. This was not a decision that was forced upon the city. Emergency managers often try to work closely with mayors and city councils, getting recommendations from the local communities they are serving. The decision to make the switch during the construction of the Karegnondi pipeline came after an 8-1 vote by the City Council and strong endorsement by the mayor and Genesee County leaders. The move also came after a series of upgrades to Flint's water treatment plant.

It's also important to remember that switching back to Detroit water will not necessarily have the effect that some expect. Flint has long-term challenges with its water infrastructure that need to be addressed.

Not Responsive

-This water situation in Flint is one of our main focuses, but what are your plans to do with that?

Gov Snyder: Well, there are a lot of things currently in the process. In terms of talking to Flint, and working with Flint to help make sure we're getting all the facts and working hard on doing the best we can to deal with the water issues in Flint.

-Nothing more substantial at this point?

Gov Snyder: Oh yeah, there's actions going on, but I think I'd rather make sure we can give you a longer list of comprehensive data taken sometime during the week.

-Sometime during the week?

Gov Snyder: Yep. We're working interactively

Subject: seeking comment on ananich

Dave:
We just received this and understand the governor also spoke to Congressman Kildee today about the potential for state funding for lead clearing water filers.

As you see, Ananich is asking for strong consideration of switching back to the Detroit water source.

I'm interested in a comment from your office on these two suggestions, particularly the Detroit water switch since Ananich has put this in writing and a grass roots group that includes local pastors asked for the same thing in a news conference this morning.

Thanks,

Senate Minority Leader Jim Ananich (D-Flint) issued the following statement:

"My constituents and I believe the state must act urgently to provide concrete solutions to the public health crisis in the City of Flint. In speaking with Governor Snyder and his key aides today, I stressed the need to work together on a number of initiatives that will ensure safe water for Flint residents.

Subject: Re: Follow-up questions re: Flint water

Thanks, Dave. This is really truly helpful. I'll leave the more technical stuff with my colleagues who are covering this more closely for now, I was just wondering what basic facts remain in dispute at this point.

In terms of the responsibility question, I guess what I meant was that if we all agree that everyone needs access to safe, fresh water, and if Flint as a city simply can't afford to provide it...does the state then have a responsibility to step in and make that happen, one way or another?

On Mon, Sep 28, 2015 at 12:44 PM, Murray, David (GOV) <MurrayD1@michigan.gov> wrote:

HI Sarah,

Touch base with Angela Minicuci at the Department of Health and Human Services – 517-373-0860 – and she has information about state blood test results that are very different than the ones that were discussed in Flint last week. Angela is outstanding. Brand Wurfel of the Department of Environmental Quality is the expert on the water itself, and how and when additives can be added that can address various issues – such as corrosion control measures. There are federal laws that might come into play here. Brad is at 517-230-6713.

I'm not sure I understand your responsibility question.

Gov. Snyder believes all state residents to have access to clean, safe water. We continue to work with Flint city leaders

It's important to remember that the emergency manager had the final say on making the change, but did so at the strong urging of Flint city leaders. This was not a decision that was forced upon the city. Emergency managers often try to work closely with mayors and city councils, getting recommendations from the local communities they are serving. The decision to make the switch during the construction of the Karegnondi pipeline came after an 8-1 vote by the City Council and strong endorsement by the mayor and Genesee County leaders. The move also came after a series of upgrades to Flint's water treatment plant.

It's also important to remember that switching back to Detroit water will not necessarily have the effect that some expect. Flint has long-term challenges with its water infrastructure that need to be addressed.

The state and city also are following laws regarding testing and corrective measures added to water. When the City changed water sources in May 2014, state and federal law required the city to sample for lead and copper for a full year to determine how the water may be interacting with residential lead plumbing to increase lead levels. Flint is moving quickly to optimize corrosion control measures in its water system. Brad is the expert here and can give you details.

The governor and the state agencies have played a highly visible role in working with Flint city leaders with their infrastructure challenges -- and will continue to do so. We understand why people are frustrated, and also want to make sure people have accurate information and know where they can go if they have questions about their health and the water connections in their home. The health and safety of Flint residents is always the first priority, and that includes ensuring there is clean, safe drinking water -- especially for children.

The state so far has provided $4.2 million in grants and restructured financing to help the city locate and fix some of the problems with its water infrastructure and add the carbon filtration system. Several state agencies continue to work with Flint leaders on their water challenges including through Mayor Walling's technical advisory board. That board includes outside experts and members will study data and offer recommendations.

The Department of Environmental Quality and the Department of Health and Human Services also are testing water and working with Flint residents on issues related to what they can do if they have concerns about the pipes in their homes.

Subject: Follow-up questions re: Flint water

Hi Sara and Dave,

I asked the Governor some questions about this in the Detroit scrum this morning. He told me everybody is still working on it, no specifics,waiting on "getting all the facts," but something should be announced this week.

I do understand that, but it does raise a couple of other question in the meantime:

--What "facts" are you still trying to get? What, specifically, is the factual dispute here at this point?

--Even if we don't have specifics yet, how much responsibility do the Governor and state ultimately bear for fixing the whole problem? Especially since the city had an EM when the water switch was made?

Thanks so much,

Sarah

Hi Danielle,

Here you go. Can you confirm that you received this? We had some confusion about your email address.

Gov. Snyder spoke with Sen. Ananich this morning about how the state can continue working with Flint city leaders. We just received the letter from the senator and are reviewing his suggestions. We deeply share the senator's commitment to making sure all state residents have access to clean and safe water.

The governor and state agencies have been closely working with Flint leaders on their infrastructure challenges for months, including about providing $4.2 million in grants and restructured loan financing to provide resources needed to locate and fix infrastructure problems and add the carbon filtration system.

It's important that people have accurate information about their health and water. The Department of Environmental Quality and the Department of Health and Human Services are testing water and working with Flint residents on issues related to what they can do if they have concerns about the pipes in their homes.

Thanks!

Attachments: 09-22-15 Kildee Requesting Temporary Assistance for Lead in Flint Water.pdf; Flint Pediatric Lead Concerns REVISED.PDF

Importance: High

Attached are two documents for your information: 1) A letter from US Representative Kildee to Craig Fugate of FEMA, HHS, EPA, and CDC and 2) a PowerPoint on Flint water concerns. Essentially, Representative Kildee is requesting FEMA take action to resolve potable water quality issues associated with the Flint water system.

This is the first we heard of the letter and I actually found out from the FEMA Region V Director when he called me about an hour ago. He and I discussed a few things on this and he will respond advising they need to work through the local EM system in MI (engaging the local EM and then EMHSD). They also are working through the local health department as I confirmed with Dr. Scott from DHHS. If Flint needs water or want water the first step is to handle it locally (at least on the EM side and then push up any gaps they cannot fill to us). We are not aware of any work the local EM has done in this regard. I will be with the FEMA Region V Director as well as the FEMA Administrator, Craig Fugate, this week if they have questions.

I have advised Dr. Jackie Scott from DHHS and will be sending her the letter and ppt.

Atlanta, GA 30329

Secretary Burwell, Administrator McCarthy, Administrator Fugate and Director Frieden:

Recent developments regarding the level of lead in the water in one of the communities I represent, Flint, Mich., have raised significant concerns about the safety of its drinking water. For this reason, I am requesting immediate resources to provide safe drinking water to the residents of Flint until additional testing can be completed that confirms the water is safe, particularly for young children.

Although the city of Flint and the Michigan Department of Environmental Quality have conducted tests and taken the position that the lead level in the water is safe and below the action level, there are significant questions about the efficacy of their testing. In fact, Dr. Marc Edwards of Virginia Tech University, an established drinking water expert, conducted his own tests as part of a study that determined the water in Flint was above the lead action level.

Additionally, yesterday the Greater Flint Health Coalition, a group of health professionals in the community, released a report showing elevated blood lead levels in residents in Flint, particularly in young children. In response, the Coalition has requested that the Genesee County Health Department release a health advisory indicating that the water in Flint is unsafe to drink.

Thus, I am requesting resources from your agency to provide clean drinking water to the residents of Flint until additional testing can determine when the water will be safe to drink and a long-term solution can be implemented.

This is a serious health issue, particularly for young children, and until the water is demonstrated to be safe, immediate action must be taken to ensure Flint's residents have potable drinking water.

I look forward to working with you and thank you for your immediate attention.

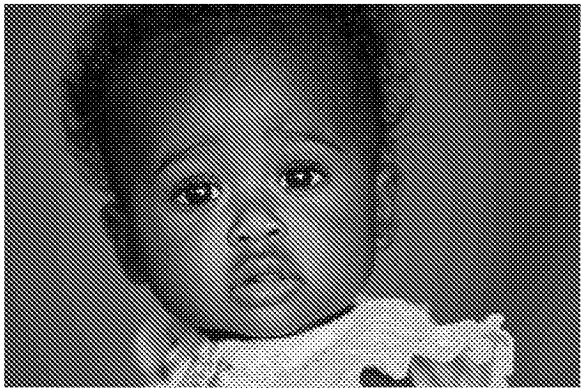
Sincerely,

Dan Kildee
MEMBER OF CONGRESS

Pediatric Lead Exposure In Flint, Michigan:
A Failure of Primary Prevention

Mona Hanna-Attisha MD MPH FAAP
Hurley Children's Hospital
Michigan State University Department of Pediatrics and Human Development

Introducing Makayla*



- 12 month old girl (DOB 8/15/2014) presented last week for her 1 year old check up. No concerns.
- Lives with single mom and 2 older siblings in west side (48504). Formula from WIC; powder mixed with warm tap water.
- Physical exam and development are normal. Makayla receives her 1 year old vaccines and routine lead and hemoglobin screening.
- *A couple days later, lead level comes back as 6 ug/dL.*

*Hypothetical scenario

Blood lead level of 6 ug/dL….

- Blood lead levels (BLL) above 5 ug/dL are considered elevated blood lead levels (EBL)
- Just a few years ago (2012), 10 ug/dL was cutoff
- Increasing evidence shows NO safe blood lead level
- Disproportionately impacts low income, minority children
- Primary prevention is most important

Primary Prevention

- "Because no measurable level of blood lead is known to be without deleterious effects, and because once engendered, the effects appear to be irreversible in the absence of any other interventions, public health, environmental and housing policies should encourage PREVENTION of all exposure to lead."

"Low Level Lead Exposure Harms Children: A Renewed Call for Primary Prevention." 2012 CDC Advisory Committee on Childhood Lead Poisoning Prevention.

What will happen to Makayla?

- Vast evidence supports increased likelihood of:
  - Decrease in IQ
    - An increase in BLL from 1 to 4 ug/dL, drops mean IQ -3.7 points
  - Small change in mean IQ, shifts entire population IQ distribution
    - Reduces high achievers IQs (>130) and increases kids with low IQs (<70)
    - Implications for special education services, employment, incarceration, life achievement, etc

Lanphear BP et al., Low-level environmental lead exposure and children's intellectual function: an international pooled analysis. Environ Health Perspect, 2005. 113:894-9.
Fewtrell LJ, Pruss-Ustun A, Landrigan P, and Ayuso-Mateos JL, Estimating the global burden of disease of mild mental retardation and cardiovascular diseases from environmental lead exposure. Environmental Research, 2004. 94:120-33.

Behavioral Burden

- Increased likelihood of :
  - ADHD behaviors
  - Delinquent behaviors and arrests
  - Total arrests and increased rates of arrests involving violent offenses
  - Other health effects: hematologic, cardiovascular, immunologic, endocrine, etc

Wright, JP, KN Dietrich, MD Ris, et al. 2008. Association of prenatal and childhood blood lead concentrations with criminal arrests in early adulthood. *PLoS Med* 5(5): e101

Chen, A, B Cai, KN Dietrich, et al. 2007. Lead exposure, IQ, and behavior in urban 5-7 year-olds: Does lead affect behavior only by lowering IQ? *Pediatrics* 119(3): e650-e658.

Needleman, HL, C McFarland, RB Ness, et al. 2002. Bone lead levels in adjudicated delinquents: A case control study. *Neurotoxicology and Teratology* 24(6):711-717.

The Cost

- "For childhood lead poisoning, $5.9 million in medical care costs, as well as an additional $50.9 billion (sensitivity analysis: $44.8–$60.6 billion) in lost economic productivity resulting from reduced cognitive potential from preventable childhood lead exposure."

- "The present value of Michigan's economic losses attributable to lead exposure in the 2009 cohort of 5 year-olds ranges from $3.19 (using U.S. blood lead levels) to $4.85 billion (using Michigan blood lead levels) per year in loss of future lifetime earnings."

Leonardo Trasande and Yinghua Liu. Reducing The Staggering Costs Of Environmental Disease In Children, Estimated At $76.6 Billion In 2008. *Health Affairs*, 30, no.5 (2011):863-870

The Price of Pollution: Cost Estimates of Environment-Related Childhood Diseases in Michigan. 2010 Report by Michigan Network of Children's Environmental Health

Lead in Water

- Increasing as source of lead, because of success in controlling other sources.
- Increasing due to aging water infrastructures, change in water sources, disinfectant uses, etc
- Disproportionally impacts developmentally-vulnerable formula-fed infants and pregnant mothers
  - For about 25% of infants drinking formula made from tap water at 10 ppb, blood lead would rise above the CDC level of concern of 5 micrograms/deciLiter (or ug/dL).
  - Increase in fetal death and reduced birth weights

Triantafyllidou, S., Gallagher. D. and Edwards, M. Assessing risk with increasingly stringent public health goals: the case of water lead and blood lead in children. Journal of Water and Health. doi: 10.2166/wh.2013.067 58-68 (2014).
Edwards, M. Fetal Death and Reduced Birth Rates Associated with Exposure to Lead-Contaminated Drinking Water. Env. Sci. and Tech. 2013 DOI: 10.1021/es4034952

Preliminary Results

(results removed)

Conclusions from BLL analysis

- % of children with EBL in Flint has increased
  - Most striking increase in zip codes with highest water lead levels
- Results underestimate risk: infants not screened for lead and water usage unknown.
  - *Accurate exposure largely unknown since national childhood lead screening focuses on household lead exposure (paint, soil, dust) at later ages (1 and 2 yrs)*

- Results are consistent and concerning. Primary prevention has failed.

Next Steps

- Immediately limit further exposure
  - Encourage breast feeding
  - No tap water for high risk groups: infants on formula & pregnant mothers
  - Declare health advisory: allows WIC to administer water or ready-to-feed formula and other resources (Salvation Army & United Way water supplies)
  - Distribution of lead clearing NSF-approved filters
  - Public education regarding precautions (flushing, etc)
  - Re-connect to Lake Huron water source ASAP

And Makayla…

- Asymptomatic now
- But what will her future hold and an entire generation of Flint children?

Subject: Flint Water Issue - Rep. Kildee Letter Received By Federal Agencies
Importance: High

Attached are two documents for your information: 1) A letter from US Representative Kildee to Craig Fugate of FEMA, HHS, EPA, and CDC and 2) a PowerPoint on Flint water concerns. Essentially, Representative Kildee is requesting FEMA take action to resolve potable water quality issues associated with the Flint water system.

This is the first we heard of the letter and I actually found out from the FEMA Region V Director when he called me about an hour ago. He and I discussed a few things on this and he will respond advising they need to work through the local EM system in MI (engaging the local EM and then EMHSD). They also are working through the local health department as I confirmed with Dr. Scott from DHHS. If Flint needs water or want water the first step is to handle it locally (at least on the EM side and then push up any gaps they cannot fill to us). We are not aware of any work the local EM has done in this regard. I will be with the FEMA Region V Director as well as the FEMA Administrator, Craig Fugate, this week if they have questions.

I have advised Dr. Jackie Scott from DHHS and will be sending her the letter and ppt.

DHHS just advised me there have been discussions with Nick Lyon and the Governor's Office on this issue. DHHS also advised me that DEQ was involved and DHHS would probably be the Public Health Advisor in Flint this week … not sure exactly what that will mean.

F/Lt Covey spoke to Jen Boyer, the Genesee County EM, and reported the following:

- This is the first she has heard about the Kildee letter.
- She mentioned that a year ago she was aware of a letter that was written to Governor Snyder.
- To her knowledge, the water in Flint is still meeting EPA standards.
- She mentioned that the infrastructure (including residential homes) is old and may be part of the problem, not just because water is from the Flint River.
- She believes the city could connect to the county system if needed.
- The city is supposed to be connecting to a new pipeline from Port Huron in the spring of 2016 which will provide a solution, but the city infrastructure will still require repair.
- She reported The Detroit water system knew Flint would one day connect to this new pipeline, so they raised rates 50%.

Tomorrow Tony Katarsky will speak with our mitigation offices on potential use of 4195 (SE MI disaster) mitigation funds and if they could be used to assist with infrastructure fixes. There is a 25% local match to the federal funds.

Attached is the FEMA response to Rep. Kildee. He may not get it for a couple of days but I told FEMA I wanted a copy and it just came through. Please hold it within the Governor's Office and this group for situational awareness so we do not get ahead of FEMA. FEMA advised him that local or private sector resources would be more expedient and practical.

FEMA

September 28, 2015

The Honorable Dan Kildee
United States House of Representatives
227 Cannon House Office Building
Washington, D.C. 20515

Dear Representative Kildee:

This is in response to your letter of September 22, 2015, to Federal Emergency Management Agency (FEMA) Administrator Craig Fugate, as well as the U.S. Department of Health and Human Services, Centers for Disease Control and Prevention and the Environmental Protection Agency. You requested federal assistance to provide safe drinking water to residents of the City of Flint, Michigan, until additional testing confirms that the water is safe. Administrator Fugate requested that I respond to you because Michigan is within FEMA Region V.

As you may be aware, the Robert T. Stafford Disaster Relief and Emergency Assistance Act, Public Law 93-288, as amended, authorizes FEMA to provide federal assistance to a state after the governor requests that the president issue a disaster declaration and the president approves the request because it has been determined that the severity and magnitude of the incident exceeds local, tribal and state capabilities. If providing safe water to its residents is beyond the city's capability, the city, through Genesee County Emergency Management, should contact the Michigan State Police Division of Emergency Management and Homeland Security. However, in this situation, it may be more expedient and practical to pursue water sources from other local or private sector entities.

If you have questions or would like additional information, please contact me or have a member of your staff contact my Congressional Affairs Specialist, Dan Shulman, at (312) 408-4427.

Sincerely,

Andrew Velasquez III
Regional Administrator

Many thanks, Chris.

There have been a LOT of conversations and work (and history) on this issue, primarily with both DEQ and DHHS lately, and Treasury previously. Sounds like you definitely got a large part of status update and lay of the land.

Let's touch base tomorrow and can fill you in further. And any insight on any potential use of mitigation funds would be incredibly helpful. We'll make sure to keep MSP EMHSD in loop with other state agencies too moving forward as this issue and infrastructure challenge isn't going away anytime soon.

Thanks again,
SW

Essentially, Representative Kildee is requesting FEMA take action to resolve potable water quality issues associated with the Flint water system.

This is the first we heard of the letter and I actually found out from the FEMA Region V Director when he called me about an hour ago. He and I discussed a few things on this and he will respond advising they need to work through the local EM system in MI (engaging the local EM and then EMHSD). They also are working through the local health department as I confirmed with Dr. Scott from DHHS. If Flint needs water or want water the first step is to handle it locally (at least on the EM side and then push up any gaps they cannot fill to us). We are not aware of any work the local EM has done in this regard. I will be with the FEMA Region V Director as well as the FEMA Administrator, Craig Fugate, this week if they have questions.

I have advised Dr. Jackie Scott from DHHS and will be sending her the letter and ppt.

Subject: water filters

Hey Dave:
Two things.

I heard a clip of the governor on Michigan Radio today, saying, "There's actions going on," he said. "But I think we'd rather make sure I can give you a longer list of the comprehensive actions we're taking sometime during the week."
Is there any information you can share about the timing of the release of this information?

Second, we've repeatedly quoted DEQ and city of Flint people about the efforts to improve water quality and printed assurances that the water meets state and federal health and safety standards. Given that, why did the governor's office help to facilitate the water filter donation?
Were the filters designed to remove TTHM, lead or both?
Thanks

Subject: Proposed Press Conference on Flint Drinking Water

Per the ongoing issues in Flint concerning their drinking water, I would offer the following recommendations. Let's discuss.

Recommendation

Press Conference in Flint – Wednesday, Thursday or Friday.

Participants

Mayor of Flint
Dan Wyant – Michigan Department of Environmental Quality
Nick Lyon – Department of Community Health
Susan Hedman – Region 5 Administrator or EPA
Harvey Hollins – Governor's office
Local Public Health Department

Announcement

Federal – State – Local action plan to address Flint Drinking Water

1. Governor Snyder names Dr. Dean Sienko as Flint drinking water Public Health Advisor.
2. All Flint schools water will immediately be tested to ensure that drinking water is safe.
3. Advisories will be disseminated recommending citizens flush your cold water pipes, use only water from the cold water tap for drinking, cooking and especially for making baby formula.
4. Implementation of fully optimized corrosion controls in the Flint drinking water system.
5. Expanded water testing of at risk properties.
6. Offer water testing at no cost to Flint residents to assure water is safe.
7. Convene a safe drinking water " Technical Review Advisory" to ensure best technology, practices and science is being utilized, including EPA's expertise and assistance from their Office of Research and Development.
8. Offer bottled water and premixed formula if test results indicate high levels of lead.
9. Accelerate water system improvements to address replacement of lead service lines.

Paul, between you and me, we have concerns about the MLive story. I'm happy to give you the information first hand.

The administration has worked closely with the Concerned Pastors group on the water issue, and the members are passionate about supporting their parishioners and the Flint community as a whole. We certainly share their concern that everyone in Flint should have safe, clean water. Flint water does meet state and federal safety standards. People have complained about the color and the odor, and faucet filters will help with those challenges as well as improving water quality overall.

About two months ago, the governor's office worked with a corporate donor to provide 1,500 of the faucet filters. We're appreciative of the efforts of the donor, which didn't want recognition. We respect those wishes. We are talking with other businesses and groups that might be able to expand the effort.

We worked with the pastors group to distribute the filters, and asked that members respect the donor's wishes not to be identified. We told the group that were not looking for credit, and appreciated the pastors' efforts in working with the community.

The governor continues to work with state, federal and city staff members and agencies on a variety of steps to build upon what we've already done to help Flint city leaders with their water infrastructure challenges.

Not Responsive

Reporter: There seems to be a difference in the interpretation of some of the data. Do you believe that the water in Flint is contributing to higher lead levels in the children there?

Gov: Well we are doing a lot of work on that. Actually I have a large team of people working on the Flint water issue as we speak. What I would say is, during the course of the week and earlier next week, hopefully we will be coming out with more public action steps that have been ongoing and will be discussing more steps to take in the future. I take it as a serious issue about the Flint water issue. Leads a serious issue, so again we're spending a lot of time and effort looking at that and hoping to partner with the people in Flint on that issue.

Sent: Wednesday, September 30, 2015 2:21 PM
To: Murray, David (GOV)
Subject: governor's statement

Dave:
Jonathan Oosting sent us this comment made by the governor today about the Flint water situation in response to questions. We're working on a story based on his remarks.

What will you do? Was it a mistake to switch to Flint river? What I would say is, we've been actively working that issue for a significant period of time, and we've put a lot of additional resources in more recent days towards the issue. In terms of a mistake, we found there are probably things that weren't as fully understood when that switch was made, and again, it was a switch made with the community. So we're going through that process of saying it appears that lead levels could be higher or could be increased, what could be done to deal with that in an effective fashion. Again, we're looking at making sure they're within safe limits according to the federal government, and I would expect us to have more to talk about this subject before the end of the week, in terms of more tangible action items, not just what we're doing, but who we're partnering with flint and the federal government."

I want to make sure I understand what's being said in the highlighted portion of the comment.
I think it's that some things were not fully understood when the switch to the Flint River was made.
Of course, I'd also like to elaborate, but I'll work with what I have.
Can you clarify or elaborate?
Thanks,

There might be some confusion. We asked the pastors to respect the wishes of the donor. We told the group that we were not necessarily looking for credit.

We have been speaking with the pastors' group throughout the year. Members know about the needs of the community. We respect their leadership and appreciate their assistance with this effort.

Subject: RE: Grant

I don't recall either grant being related to "the existence of lead and copper pipes, and the impact…of Flint River water" (Nancy's words) as neither had surfaced as an issue that I am aware of. Brad?

The grants…which the City submitted applications for (which I do not have access to tonight)…were to be used for exactly what was described in the Gov's release:

$1.1 million for water system enhancement through improved waste management and $900k for system enhancement through leak detection and pipe assessments.

The other $2.24 million you are asking about came from the state-approved (Treasury & DEQ) restructuring of Flint's Drinking Water Revolving Fund loans. The restructuring saved the city the $2.24m…with $1.5m used to pay for the installation of a Granulated Active Charcoal filter (GAC) at the Water Treatment Plant.

Below is a section from the Flint Water TPs distributed in late January-early February 2015.

The City has received significant financial assistance through both grant programs and bond restructuring initiatives administered by the MI Department of Treasury. This financial assistance has allowed the City to replace miles of aged pipeline and begin efforts to install a specialized filter at the Water Treatment Plant.

In February, Flint was awarded a total of $2 million through two Financially Distressed Cities, Villages, and Townships Grants. $1.1 million was awarded for water system enhancements through improved waste management while $900,000 was awarded for water system enhancements through leak detection and pipe assessments.

On April 8th, the City announced that it was moving forward with a series of actions to ensure the continued safety of Flint drinking water and address issues of discoloration and odor. The most significant step will be the installation of a Granulated Active Charcoal filter (GAC) at the Water Treatment Plant. The GAC filter will help block or eliminate the formation of TTHM during the filtration process.

A contract for the filter installation was approved by the State Treasurer with the project targeted for completion by mid-July. The $1.5 million project will be funded with proceeds from the state-approved restructuring of Flint's Drinking Water Revolving Fund loans ($2.24 million).

The City is undertaking a number of other improvements to the water system including the acceleration of valve replacements, targeted hydrant flushing, the replacement of two miles of water main in a critical area of the city, and acceleration of the project to automate plant operations.

Leaders address ‘crisis of confidence’ with Flint water

Residents of Flint have been hearing concerning news about the municipal water supply for more than a year. Since the City switched water supplies and began using the Flint River as its source, some have complained that the water is different. State regulators have cited the system for various compliance issues.

More recently, voices within the community – and some from other states – have alleged state regulators failed to do their jobs. It simply is not the case. Leaders from the regulatory community today announced an 11-point plan to build our knowledge about lead in flint, better protect the community and restore public confidence in the regulatory framework.

Over the past year, the city has completed lead and copper testing required by law. Lead is a real concern, particularly in children. State and federal regulators run programs to monitor lead in drinking water and in kids’ blood levels specifically to track lead impacts on our communities.

It is important to remember lead comes from many sources, particularly in the state’s urban and industrial areas. It is in soils, deposited for decades by leaded fuel and industrial processes. It is paint, in homes built in the mid-1970s or earlier. And it is common in the plumbing and service connections of older homes, which is why the DEQ requires community water sources around the state to track and record it and take steps when levels surpass federal action thresholds.

Flint’s drinking water passed its lead and copper test. However, testing done by non-regulatory entities produced a different picture, creating confusion and concern – for residents of flint as well as city, state and federal regulators.

The lead in question does not coming from the Flint River. The water leaving the drinking water plant is clean and safe. The water traveling through the distribution system also is free of lead. The lead issues happen when the water reaches homes that have lead service lines or lead plumbing. This is important to know for two reasons: One, because the contamination happens at the homeowner level, it is very difficult to track precisely. And, the longer water sits in lead pipes, the more lead it takes on, so homes on the same block might have very different results from lead testing, based on what kind of plumbing they have and how homeowners use their water.

The City’s efforts to test for lead involve sending water sampling kits to homeowners and relying on them to participate and follow the sampling instructions, and that has been a long-standing challenge in Flint. This year, the City sent out 200 bottles in January and got 60 samples back by June. Regulators must operate on the knowledge available, and we only know what the customers let us know by participating in the City’s testing.

However, a recent announcement by local doctors that blood lead levels are rising in children residing in Flint's most at-risk zip codes added enough to the state's knowledge to spark some unusual precautionary measures. Experts are still working the data to determine exactly what it means, but the state takes lead seriously. Leaders have put forth an 11-point plan with short-term and long-term actions that will bolster our knowledge of the situation and provide a more accurate assessment of the threat level.

In the near term, the state will move immediately to provide free lead water filters for Flint water customers. We will test the drinking water at Flint schools. We will provide bottled water and formula to Flint mothers at risk. The system will be optimized for corrosion controls by the end of the month. These precautions will help protect the community while the state takes a deeper look at the drinking water system, the last round of test results and the testing protocols.

Flint residents should understand the state has been focused on Flint's water and Flint's kids for decades, but state leaders cannot make knee-jerk decisions based on unchecked allegations in the media. We have the responsibility to check facts and make decisions carefully, using the knowledge we have available to direct public resources.

Community participation plays a key role in our success. Residents who receive a testing kit from the City should recognize that this is an important opportunity to learn about their lead exposure while helping the city better track the quality of the water they provide. Residents with lead concerns should request a free home test from the city. Parents of young kids should take advantage of free blood lead level testing at the local community health department.

The plan set forth by the state speaks to a coordinated partnership among city, state and federal leaders. With community involvement, Flint's residents can be assured of more accurate and effective protection from lead exposure.

A new way forward in Flint

State regulatory leaders were disappointed by recent Free Press editorials mischaracterizing Lansing's oversight of the City of Flint's drinking water system. The paper's portrayal of the state as uncaring about drinking water quality and the community's exposure to lead are simply off the mark.

State and federal regulators run programs to monitor lead in drinking water and in kids' blood levels specifically to track lead impacts on our communities. Lead is a real concern, particularly in children, and we take our responsibility seriously.

But it is important to remember that lead is all around us. It is in soils, deposited for decades by leaded fuel and industrial processes. It is paint, in homes built in the mid-1970s or earlier. And it is unfortunately common in the plumbing and service connections of older homes, which is why the DEQ requires community water sources around the state to track and record it and take steps when levels surpass federal action thresholds.

Let's be clear: The Flint River is not contributing lead. The water leaving the drinking water plant is clean and safe. The water traveling through the distribution system also is free of lead. The lead issues are the result of water in homes that have lead service lines or lead plumbing. And because the contamination factor is at the homeowner level, it is difficult to track or assess with the kind of specificity customers would like to think regulators have. Two homes on the same block might have very different results from lead testing, based on what kind of plumbing they have and how homeowners use their water.

Moreover, the City's efforts to test for lead involve sending water sampling kits to homeowners and relying on them to participate and follow the sampling instructions, and that has been a long-standing challenge in Flint. This year, the City sent out 200 bottles in January and got 60 samples back by June. We must operate on the best knowledge we have available, and we only know what the customers let us know by participating in the City's testing.

Emerging data from local doctors, however, added to our knowledge enough to spark some unusual precautionary actions. They reported to the media that blood lead levels in Flint kids at their offices are up this year. It's still early to know exactly what that means, but because lead is a serious threat to children's development, we have decided to take some short-term precautionary measures and do more to learn exactly what is happening in the city.

The state today joined with local and federal authorities to present an 11-step action plan designed to produce a clearer picture of lead in the community's water, offer immediate protection for its kids and families with corrosion control and free lead water

filters, review and audit testing protocols, and immediately assess the schools to reassure parents their kids are not exposed to lead at the drinking fountains.

Critics in the community and at the Free Press have said we have been slow to respond to Flint's drinking water concerns. The truth is that local, state and federal authorities have been paying very close attention to Flint's drinking water all along, but we have the responsibility to check facts and use the knowledge we have to develop responsible, meaningful strategies that will help everyone clearly understand the real risk level and take appropriate actions.

We will be transparent with all we are doing and everything we determine. But Flint residents should also recognize our ultimate success depends on their help. Residents with lead concerns should have their home water tested – customers of Flint water can request it for free. Parents of younger kids should have their children get free blood lead level testing at the local community health department. Residents who receive a testing kit from the City should recognize that this is an important opportunity to learn about their lead exposure while helping the city better track the quality of the water they provide.

We are committed to doing all we can to protect drinking water and public health, in Flint and the rest of Michigan. Possibly the most difficult crisis to address in Flint right now is a crisis of public confidence. The plan set forth today should send the strong signal that residents can be assured the city, state and federal regulators are accountable, forthright and working hard to protect them. It is the community's responsibility to take the steps available to them as well. Ensuring public health is a public service, but the public can play a key role.

We're always glad to help, Damon - that's what we're here for. Please just reach out in advance in the future.

Stay tuned - as governor and team have noted, our administration has dedicated a lot of time and resources to work collaboratively on this issue as well as see what additional action items we can do and help with. We were hoping to have that wrapped up by week's end. As details get finalized, I know folks will be in touch.

More soon,
SW

All-

Just received this from Dave Eggert…

I am going to tell David that **Treasury did send a timely response to the Representative.** It was due (following a statutory extension) on Tuesday, September 29, 2015. Our response (attachment 1) went in the mail on Tuesday. As you will see, it was a "denial," as Treasury does not have any records regarding "waivers, permits or applications to use the Flint River…"

Apparently, the response has not arrived in his (Flushing, MI) mailbox…or is arriving today.

I have also attached the extension letter (attachment 2), which was timely-mailed as well.

Let me know if you have any questions…

> **Thursday, Oct. 1, 2015** **Phone: (517) 373-7515**

Statement from state Rep. Phil Phelps (D-Flushing) on his FOIA requests pertaining to the City of Flint water crisis being denied:

"Residents of the City of Flint face a substantial health risk due to contaminants found in their drinking water. In an effort to not politicize this situation, I have been working directly with state and local officials in seeking important information and attempting to correct the City's water crisis. Unfortunately, I have been faced with continual road blocks in my requests for information. It has been nearly a month since I submitted Freedom of Information Act (FOIA) requests to the State and the City of Flint requesting to see documents related to the City's switch to using water from the Flint River. I requested the applications and permits required by law to change a city's source of water. So far, the State Treasury has violated FOIA by not providing any information or even a denial. The Department of Environmental Quality (DEQ) and City of Flint have denied my request saying that the documents I requested do not exist. However, state law requires Michigan cities to apply for a permit from the DEQ to switch their source of water. Violation of this law is punishable by a fine of $5,000 per day and possible incarceration. I find it hard to believe that the DEQ and the City of Flint ignored such a critical step, not to mention one that the cost in fines alone would already be roughly $2.5 million and cause those responsible to be subject to criminal prosecution.

"My request for these documents was meant to be a fact-finding mission to ascertain the degree to which the State knew about or took any action to determine the potential hazards of making this switch prior to being officially ordered by the State-appointed Emergency Manager. Since the State has decided not to disclose this information to me, it is unclear the extent to which the State is culpable. I believe the bottom line here is that the decision to switch the source of Flint's water to the Flint River was made by the Emergency Manager appointed by Governor Snyder and the burden is on his shoulders to make this right.

"The use of the river water has caused a great amount of destruction to the City's water infrastructure, and it has put the residents who use the water in harm's way. To help continue this fight for information, I have retained attorney Keith D. Flynn of the law firm Miller Cohen P.L.C. to further evaluate my legal options. My position and recommendation to the Governor on this issue is that the State should immediately switch Flint's water source back to the Detroit Water System at no additional cost to Flint residents and supply water filters to every household in Flint.

"Furthermore, the State should begin to estimate costs for the total damage done to the City's public works infrastructure and for the treatment of potential adverse health outcomes we could see in Flint residents in the future and allocate expenditures to correct this problem."

Michigan leaders to announce action plan for Flint drinking water

Friday, Oct. 2 at 1:30 p.m.
Local, state and federal leaders will host a press conference to announce a comprehensive action plan for addressing drinking water concerns in Flint. Participants will include:

- Harvey Hollins, Director of the Office of Urban Initiatives for Gov. Rick Snyder
- Dan Wyant, Director for the Michigan Department of Environmental Quality
- Nick Lyon, Director for the Michigan Department of Health and Human Services
- Dr. Eden Wells, Chief Medical Executive for the Michigan Department of Health and Human Services
- Dayne Walling, Mayor of Flint
- Other local, state and federal officials

Location:
Kettering University, Innovation Center
1300 Bluff St.
Flint, MI 48504

This is a media event open to credentialed news media only. Media who plan to attend this event should RSVP by noon Friday. Contact Rosemarie Olszewski at 517-284-6700 or olszewskir@michigan.gov.

Flint Drinking Water Action Plan
Talking Points

Overall Messaging

- Repeated testing shows the water leaving Flint's drinking water system is safe to drink and meets all federal guidelines, including lead.
- After the switch the Flint River, the compliance testing protocol yielded results of 6 ppb in December 2014 and 11 ppb in June 2015. Both results were below the federal action level of 15 ppb.
- However, we recognize some residents experience higher levels of lead in the water that comes out of their faucets because of lead plumbing in the home, and that's a concern.
- Out of an abundance of caution, we want to address the needs of all Flint families, and so we have developed an action plan that includes both short- and long-term solutions.
- The state plan focuses on increasing water testing, offering additional precautions for families, and providing long-term solutions to address the city's water infrastructure.

Messaging regarding the action plan

The city and the state are working together to gather more data to ensure the water that leaves the treatment plant as well as the water that arrives in Flint homes is safe for all residents.

- **Immediately test Flint public schools to ensure that drinking water is safe. Testing will also be available at no cost to any other school in Flint.**
    - Although Flint's drinking water meets all federal requirements, the state wants to take extra steps to ensure that drinking water is safe for the city's children.
    - The state will fund this testing (about $30,000) at no cost to the city or the local schools, and make the results publicly available.

- **Expand health exposure testing of individual residences.**
    - To double-check its data as well as provide residents with an additional layer of assurance, the DEQ will conduct more tests at Flint properties.
    - The Technical Advisory Committee will determine the scope of this expanded testing.

- **Offer water testing at no cost to Flint residents to assure water is safe.**
    - Although all testing indicates water in the city of Flint meets all federal standards, we understand some residents are concerned.
    - To ensure water in individual homes is safe, free water testing is available to all Flint residents.
    - We encourage anyone with a concern to get their water tested.
    - Contact the city water department to have your water tested.

- **Begin optimizing corrosion controls in the Flint drinking water system.**

- A fully optimized corrosion control system can help coat the inside of pipes to minimize the amount of lead that enters the drinking water after it leaves the treatment plant.
- This is a helpful step that can help minimize lead system-wide, and we're pleased the city is moving to take this step.
- If asked: This was not initially required because a fully optimized corrosion control system is not federally required in many water systems. Even today, since Flint is meeting all federal standards, this fully optimized system is not required. However, to address public concerns and ensure every possible precaution is taken, the city is moving forward with installing this corrosion control system.

- **Convene a "Safe Drinking Water Technical Advisory Committee" to ensure the best technology, practices and science are being utilized, and add an expert from the EPA's Office of Research and Development to the group.**
  - The Safe Drinking Water Technical Advisory Committee will meet Oct. 7 to discuss fully optimizing the corrosion control system, expanding testing of at-risk properties, and other topics.
  - Tom Burke, the Deputy Assistant Administrator of EPA's Office of Research and Development as well as the EPA's Science Advisor, will participate on the committee. Prior to joining EPA, he held prominent positions at the Johns Hopkins Bloomberg School of Public Health and founded the Johns Hopkins Risk Sciences and Public Policy Institute. He brings substantial expertise, and we're pleased he is able join the committee.

- **Accelerate water system improvements to address replacement of lead service lines.**
  - Regardless of the drinking water source – whether it be DWSD, the Flint River or Lake Huron – the only permanent fix for lead is to replace all 18,000 of the private lead service lines in the city. These are the lines on private property that lead from the curb to individual homes.
  - This is a problem in communities statewide, and one we want to address with a long-term solution.
  - The state and EPA are working together to find a way for the city to access Drinking Water Revolving Loan funds for the work.

- **Expedite completion of Karegnondi Water Authority.**
  - The move to the Flint River was always a temporary measure until the connection to the KWA and to Lake Huron was completed.
  - This is the ultimate goal of the venture, and the state and locals will work together to speed up completion of the connection.

- **Governor Snyder names Dr. Eden Wells as Flint Drinking Water Public Health Advisor.**
  - Dr. Wells is the Director for the Preventive Medicine Residency at the University of Michigan School of Public Health in Ann Arbor as well as the Chief Medical Executive for MDHHS.

- She brings years of experience in epidemiology and preventative medicine to the issue, and we're thrilled to have her expertise.
- Dr. Wells will coordinate with Hurley Medical Center to share data on blood lead levels in children, as well as address other emerging issues.

- **Provide water filters to residents of Flint.**
  - As an additional precaution, water filters will be available to low-income families.
  - This provides another safeguard to ensure everyone in the city of Flint has access to clean drinking water that they feel confident drinking.

- **Expand a comprehensive lead education initiative.**
  - Lead plumbing is common in homes built prior to 1986, and anyone in the state with lead pipes in their home can take some extra precautions to minimize lead in their drinking water.
  - It takes time for lead to accumulate in drinking water from plumbing, and so flushing your pipes prior to using them can minimize your exposure.
    - To flush your pipes, run the water until it's as cold as it will go. This can take as little as 5 to 30 seconds if you have recently flushed the toilet or otherwise used water in your home, or as long as 2 to 5 minutes if you have not used any water in hours.
    - In the city of Flint, running the water for 5 minutes only costs about 3-16 cents, depending on your faucet.
  - Additionally, more lead gets into hot water than cold water. Use only cold water for drinking, cooking and making baby formula.

Michigan leaders announce action plan for Flint drinking water

Local, state and federal leaders today announced a comprehensive action plan for drinking water in Flint, designed to address both the short- and long-term needs of residents.

The action plan focuses on increasing water testing, offering additional precautions for families with lead plumbing in their homes, and providing long-term solutions to address the city's water infrastructure.

"We are deeply concerned by the lead results we are seeing in parts of Flint," Snyder said. "Although we know the water leaving Flint's drinking water system is safe to drink, some families with lead plumbing on their property experience higher levels of lead in the water that comes out of their faucets. We are concerned for those families, and we created this action plan to address their immediate needs as well as the long-term needs of all Flint residents."

The city and the state also are working together to gather more data to ensure the water that leaves the treatment plant as well as the water that arrives in Flint homes is safe for all residents. The plan includes:

- Immediately test Flint public schools to ensure that drinking water is safe. Testing also will be available at no cost to any other school in Flint.
- Expand health exposure testing of individual residences.
- Offer water testing at no cost to Flint residents to assure water is safe.
- Begin optimizing corrosion controls in the Flint drinking water system.

- Convene a "Safe Drinking Water Technical Advisory Committee" to ensure the best technology, practices and science are being utilized, and add an expert from the EPA's Office of Research and Development to the group.
- Accelerate water system improvements to address replacement of lead service lines.
- Expedite completion of Karegnondi Water Authority.
- Gov. Rick Snyder names Dr. Eden Wells as the Flint Drinking Water Public Health Advisor.
- Provide water filters to residents of Flint.
- Expand a comprehensive lead education initiative.

Local, state and federal leaders announced the plan at a press conference today at Kettering University's Innovation Center in Flint. Participants included:

- Harvey Hollins, Director of Snyder's Office of Urban Initiatives
- Dan Wyant, Director of the Michigan Department of Environmental Quality
- Nick Lyon, Director for the Michigan Department of Health and Human Services
- Dr. Eden Wells, Flint Drinking Water Public Health Adviser
- Dayne Walling, Mayor of Flint

"This action plan offers concrete steps we will take in a local, state and federal partnership to ensure all Flint residents have safe water to drink," Wyant said. "The DEQ will work closely with the city to gather further data to ensure the water that leaves Flint's system as well as the water that arrives in Flint homes is safe to drink."

To have your water tested, call 810-787-6537 and press 1, or email flintwater@cityofflint.com. For more information, visit www.michigan.gov/flintwater.

tommasulok@michigan.gov

On stage
Dan Wyant
Harvey Hollins
Nick Lyon
Dr. Eden Wells
Dayne Walling

Harvey Hollins

- Thank you all for being here today. I'm Harvey Hollins, Director of the Office of Urban Initiatives for Gov. Rick Snyder.
- We're here as representatives of local, state and federal government to talk about ensuring safe drinking water for everyone in Flint. We have with us today:
    - Nick Lyon, Director of the Michigan Department of Health and Human Services
    - Dr. Eden Wells, Chief Medical Executive for the Michigan Department of Health and Human Services
    - Dayne Walling, mayor of Flint
    - And Dan Wyant, director of the Michigan Department of Environmental Quality. Dan?

Dan Wyant

- Thank you, Harvey. And thank you all for being here today.
- We know many residents are concerned about their health and the health of their children. We understand many have lost confidence in the drinking water system, and we need to build that back up. And we recognize we need to do more.
- We have an action plan to announce today that will address both the short- and long-term issues.
- It focuses on increasing water testing, offering additional precautions for families with lead plumbing in their homes, and providing long-term solutions to address the city's water infrastructure.
- The plan includes:
    - Immediately test Flint public schools to ensure that drinking water is safe. Testing also will be available at no cost to any other school in Flint.
    - Expand health exposure testing of individual residences.
    - Offer water testing at no cost to Flint residents to assure water is safe.
    - Begin optimizing corrosion controls in the Flint drinking water system.
    - Convene a "Safe Drinking Water Technical Advisory Committee" to ensure the best technology, practices and science are being utilized, and add an expert from the EPA's Office of Research and Development to the group.
    - Accelerate water system improvements to address replacement of lead service lines.
    - Expedite completion of Karegnondi Water Authority.
- Now, I want to turn the mic over to my colleague Nick Lyon to discuss some of these plans in more detail.

Nick Lyon

- Provide water filters to residents of Flint.
- Expand a comprehensive lead education initiative.
- Gov. Rick Snyder names Dr. Eden Wells as the Flint Drinking Water Public Health Advisor.

Dr. Eden Wells

Discuss Hurley's data, concern about blood lead levels

Harvey Hollins

Bring up mayor

Dayne Walling

Talk about advisories issued, free water testing available, next meeting of the Citizen Advisory Committee.

Flint Drinking Water
Media Q&A

Is the city going back to DWSD?
That's something we're leaving open. It's certainly an option, but there are no moves at this time to do so. If it becomes something city leadership is interested in doing, the state is willing to act as a facilitator between Flint and DWSD to help come to conclusion that's best for the residents of Flint.

How did the state not see or fix this problem sooner?
Right now, we're focusing on addressing the problem at hand. Every household in the city of Flint is going to receive a water filter. The Flint Water Treatment Plant is going to fully optimize its corrosion controls by Nov. 1. And we're going to accelerate water system improvements to address the replacement of lead service lines.

In the long term, we will work with the U.S. EPA to look at water testing protocol.

Is the water safe?
The water leaving the Flint Water Treatment Plant is safe to drink and meets federal guidelines for lead. However, we recognize some residents experience higher levels of lead in the water that comes out of their faucets because of lead plumbing in the home. We will expand water testing to better determine which areas have a problem; however, in the meantime, every home will receive a filter to ensure their drinking water is safe.

Does this mean Marc Edwards was right?
We aren't familiar with his testing protocol and have not seen his data. All we know is the state's data and the data Hurley Medical Center provided indicate a need to take action.

Why didn't you require corrosion controls from day one?
When the city switched water sources, they did begin using lime softening as a corrosion control. DWSD used phosphates, which is another form of corrosion control, but far from the only one. Flint was within federal protocols when it chose to use lime, and this is consistent with what every other community was required to do.

With more data in hand, the city can now work to optimize their corrosion control system, and has pledged to do so by Nov. 1.

How do you feel about the state and federal testing protocols now that you know there was a problem?
We're going to be taking a look at that, because what weren't seeing is concerning. But in the meantime, we're going to…

Why are you requiring optimization now?
What will you do if the schools you are testing come back with lead?
Is the Governor going to give the city the $30 million it asked for? Or the $13 million state Sen. Ananich wants to include in the budget?
Why did the Governor and the state ignore city residents who have been saying there's a problem for six months?
Why did the Governor hide the fact that he was involved in distributing filters previously?
Will you meet with Marc Edwards?
Do you trust the city's data?
Why did the Governor allow the city to switch away from DWSD initially?
Has the city/Governor put residents at risk?
What will the state do about my children? Lead poisoning causes irreversible damage.
Is lead just a problem in Flint?
Why isn't the Governor here today?
Does the Flint River have lead? Is it more corrosive than the water from DWSD?
If the lead is in individual homes' plumbing, how long will it take to fix this problem? Will the move to KWA fix it, or will we still see lead?
Will testing start over when we move to KWA?
Why aren't Kildee and Ananich here?
How much are we paying all these new consultants – Dr. Wells and the EPA expert?
Did the DEQ provide any advice to the emergency manager about the switch from DWSD?
How long has lead been a problem in Flint? If the problem is in people's home, does that mean they have always been poisoned by this?
Why aren't you declaring a state of emergency?
Why aren't you providing bottled water?
How long does it take for the system to be fully optimized once the corrosion control treatment begins?

Michigan leaders announce action plan for Flint drinking water

Local, state and federal leaders today announced a comprehensive action plan for drinking water in Flint, designed to address both the short- and long-term needs of residents.

Gov. Rick Snyder, the Michigan Departments of Environmental Quality, and Health and Human Services, the Environmental Protection Agency, and the City of Flint released an~~The~~ action plan focuses on increasing water testing, offering additional precautions for families with lead plumbing in their homes, and providing long-term solutions to address the city's water infrastructure.

"We are deeply concerned by the lead results we are seeing in parts of Flint," Snyder said. "Although we know the water leaving Flint's drinking water system is safe to drink, some families with lead plumbing on their property experience higher levels of lead in the water that comes out of their faucets. We are concerned for those families, and we created this action plan to address their immediate needs as well as the long-term needs of all Flint residents."

The city and the state also are working together to gather more data to ensure the water that leaves the treatment plant as well as the water that arrives in Flint homes is safe for all residents. The plan includes:

- Immediately test Flint public schools to ensure that drinking water is safe. Testing also will be available at no cost to any other school in Flint.

- Expand health exposure testing of individual residences.
- Offer water testing at no cost to Flint residents to assure water is safe.
- Begin optimizing corrosion controls in the Flint drinking water system.
- Convene a "Safe Drinking Water Technical Advisory Committee" to ensure the best technology, practices and science are being utilized, and add an expert from the EPA's Office of Research and Development to the group.
- Accelerate water system improvements to address replacement of lead service lines.
- Expedite completion of Karegnondi Water Authority.
- Gov. Rick Snyder names Dr. Eden Wells as the Flint Drinking Water Public Health Advisor.
- Provide water filters to residents of Flint.
- Expand a comprehensive lead education initiative.

In addition to the action plan, zip code-level data does show that there has been an increase in elevated childhood blood lead levels in specific communities. Initial analysis of MDHHS data found that blood lead levels of children in Flint have followed an expected seasonal trend. While this analysis for Flint as a whole remains true, after a comprehensive and detailed review down to the zip code level, MDHHS data state analysis is consistent with that presented by Hurley Children's Hospital.

"While we cannot conclusively say that the water source change is the sole cause of the increase, this analysis supports our efforts as we take active steps to reduce all potential lead exposures in Flint," said MDHHS Director Nick Lyon. "As part of this, we are working closely with our public and private partners to provide Flint residents with water filters and educate families about the steps they can take to reduce all lead exposures in their home."

Local, state and federal leaders announced the plan at a press conference today at Kettering University's Innovation Center in Flint. Participants included:

- Harvey Hollins, Director of Snyder's Office of Urban Initiatives
- Dan Wyant, Director of the Michigan Department of Environmental Quality
- Nick Lyon, Director for the Michigan Department of Health and Human Services
- Dr. Eden Wells, Flint Drinking Water Public Health Adviser

- Dayne Walling, Mayor of Flint

"This action plan offers concrete steps we will take in a local, state and federal partnership to ensure all Flint residents have safe water to drink," Wyant said. "The DEQ will work closely with the city to gather further data to ensure the water that leaves Flint's system as well as the water that arrives in Flint homes is safe to drink."

Michigan leaders announce action plan for Flint drinking water

Local, state and federal leaders today announced a comprehensive action plan for drinking water in Flint, designed to address both the short- and long-term needs of residents.

Gov. Rick Snyder, the Michigan Departments of Environmental Quality, and Health and Human Services, the Environmental Protection Agency, and the City of Flint released an~~The~~ action plan focuses on increasing water testing, offering additional precautions for families with lead plumbing in their homes, and providing long-term solutions to address the city's water infrastructure.

"We are deeply concerned by the lead results we are seeing in parts of Flint," Snyder said. "Although we know the water leaving Flint's drinking water system is safe to drink, some families with lead plumbing on their property experience higher levels of lead in the water that comes out of their faucets. We are concerned for those families, and we created this action plan to address their immediate needs as well as the long-term needs of all Flint residents."

The city and the state also are working together to gather more data to ensure the water that leaves the treatment plant as well as the water that arrives in Flint homes is safe for all residents. The plan includes:

- Immediately test Flint public schools to ensure that drinking water is safe. Testing also will be available at no cost to any other school in Flint.

- Expand health exposure testing of individual residences.
- Offer water testing at no cost to Flint residents to assure water is safe.
- Begin optimizing corrosion controls in the Flint drinking water system.
- Convene a "Safe Drinking Water Technical Advisory Committee" to ensure the best technology, practices and science are being utilized, and add an expert from the EPA's Office of Research and Development to the group.
- Accelerate water system improvements to address replacement of lead service lines.
- Expedite completion of Karegnondi Water Authority.
- Gov. Rick Snyder names Dr. Eden Wells as the Flint Drinking Water Public Health Advisor.
- Provide water filters to residents of Flint.
- Expand a comprehensive lead education initiative.

In addition to the action plan, zip code-level data does show that there has been an increase in elevated childhood blood lead levels in specific communities. Initial analysis of MDHHS data found that blood lead levels of children in Flint have followed an expected seasonal trend. While this analysis for Flint as a whole remains true, after a comprehensive and detailed review down to the zip code level, MDHHS data state analysis is consistent with that presented by Hurley Children's Hospital.

"While we cannot conclusively say that the water source change is the sole cause of the increase, this analysis supports our efforts as we take active steps to reduce all potential lead exposures in Flint," said MDHHS Director Nick Lyon. "As part of this, we are working closely with our public and private partners to provide Flint residents on MDHHS assistance programs with water filters and educate families about the steps they can take to reduce all lead exposures in their home."

MDHHS is making National Sanitation Foundation (NSF) certified water filters available to clients who are active Family Independence Program (FIP), Food Assistance Program (FAP), Child Development and Care (CDC) or Social Security Insurance (SSI) recipients.

Local, state and federal leaders announced the plan at a press conference today at Kettering University's Innovation Center in Flint. Participants included:

- Harvey Hollins, Director of Snyder's Office of Urban Initiatives
- Dan Wyant, Director of the Michigan Department of Environmental Quality
- Nick Lyon, Director for the Michigan Department of Health and Human Services
- Dr. Eden Wells, Flint Drinking Water Public Health Adviser
- Dayne Walling, Mayor of Flint

"This action plan offers concrete steps we will take in a local, state and federal partnership to ensure all Flint residents have safe water to drink," Wyant said. "The DEQ will work closely with the city to gather further data to ensure the water that leaves Flint's system as well as the water that arrives in Flint homes is safe to drink."

To have your water tested, call 810-787-6537 and press 1, or email flintwater@cityofflint.com. For more information, visit www.michigan.gov/flintwater.

Subject: Revised am media plan

Importance: High

All –

Per some of the latest developments and issues and conversation with Governor earlier today, this is what am now proposing for Flint water media time tomorrow. Please let me know if any issues or concerns ASAP.

11 to 11:10 – pre-brief with Gov., Dan Wyant, Nick Lyon, and Dr. Eden Wells and staff (last minute issues, review flow, messaging).

11:15 – 11:40 a.m. – media conference (with EMBARGOED info until 1:30 p.m.) call with following media targets:

Flint Journal/MLive – Ron Fonger
Reporters from each of three TV stations: WJRT TV 12, WNEM TV 5 and WEYI TV 25
WFNT Radio - Jason Cooper
MI Radio – Steve Carmody
Associated Press – Ed White
Detroit News – Jim Lynch
Detroit Free Press – Nancy Kaffer/Kristy Tanner

NOTE: Combining with DFP and other reporters given some of the local announcements today and the fact that the Governor wanted our Cabinet team participating on the phone too. That way everyone hears everything the same way at the same time.

Looks good to me.

My only question: We're trying to keep the language on the action plan steps consistent across our documents. I like some of the changes you've made. Can we incorporate that new language into the graphic Josh is putting together?

Gov. Rick Snyder: Comprehensive action plan will help Flint residents address water concerns

Collaborative effort with state, federal and city leaders focuses on testing, assistance

FLINT, Mich. – Flint residents need to have access to safe, clean, water now and long into the future, Gov. Rick Snyder said, announcing a comprehensive action plan created with state, federal and city leaders to address concerns about drinking water.

The water leaving Flint's drinking water system is safe to drink, but some families with lead plumbing in their homes might experience higher levels of lead in the water that comes out of their faucets.

The action plan focuses on increasing water testing, offering additional precautions for families with lead plumbing in their homes, and providing long-term solutions to address the city's water infrastructure challenges. The plan was

created at Snyder's direction by the Michigan Department of Environmental Quality, and the Department of Health and Human Services, the U.S. Environmental Protection Agency, and the City of Flint.

"We are deeply concerned by the lead results we are seeing in parts of Flint," Snyder said. "People are worried about their health and their families, and they need to have accurate information. Today's action plan builds upon ongoing work with state and federal agencies and our partnership with city and community leaders. Together, we are working to ensure that all Flint residents can feel safe and address potential problems."

The city and the state also are working together to gather more data to ensure the water that leaves the treatment plant as well as the water that arrives in Flint homes is safe for all residents. The plan includes:

- Testing in Flint public schools immediately to ensure that drinking water is safe, with testing also available at no cost to any other school in Flint.
- Expanding health exposure testing of individual homes.
- Offering free water testing to Flint residents to assure their drinking water is safe.
- Beginning an optimization of corrosion controls in the Flint drinking water system.
- Convening a Safe Drinking Water Technical Advisory Committee to ensure the best technology, practices and science are being followed, and adding an expert from the Environmental Protection Agency's Office of Research and Development to the group.
- Accelerating water system improvements to address replacement of lead service lines.
- Naming Dr. Eden Wells, chief medical executive for the Michigan Department of Health and Human Services, as the Flint drinking water public health adviser.
- Providing Flint residents with water filters for their faucets.
- Expanding a comprehensive lead education initiative to make sure residents have detailed information about to protect themselves and their homes.
- Expediting the completion of the Karegnondi Water Authority pipeline.

Residents can have their water tested by calling 810-787-6537 and pressing 1, or emailing flintwater@cityofflint.com. Additional information is available at www.michigan.gov/flintwater.

State health experts said there has been an increase in elevated childhood blood lead levels in some specific communities. Initial analysis of MDHHS data found that blood lead levels of children in Flint have followed an expected seasonal trend. While this analysis for Flint as a whole remains true, a comprehensive and detailed review breaking down data by ZIP codes with the city revealed that MDHHS data is consistent with a study presented recently by Hurley Children's Hospital.

"While we cannot conclusively say that the water source change is the sole cause of the increase, this analysis supports our efforts as we take active steps to reduce all potential lead exposures in Flint," MDHHS Director Nick Lyon said. "As part of this, we are working closely with our public and private partners to provide Flint residents on MDHHS assistance programs with water filters and educate families about the steps they can take to reduce all lead exposures in their home."

As a part of the action plan, MDHHS is making National Sanitation Foundation certified water filters available to clients who are active Family Independence Program, Food Assistance Program, Child Development and Care or Social Security Insurance recipients.

"This action plan offers concrete steps we will take in a local, state and federal partnership to ensure all Flint residents have safe water to drink," DEQ Director Dan Wyant said. "The DEQ will work closely with the city to gather further data to ensure the water that leaves Flint's system as well as the water that arrives in Flint homes is safe to drink."

Dave,

This has also been sent to Rosemarie's e-mail address--

WNEM TV5 in Saginaw, Michigan plans to send a reporter/photographer crew to the media event being held on Friday, October 2 at 1:30 p.m. at the Kettering University Innovation Center. This is a presser announcing an action plan for drinking water concerns in Flint.

To confirm that you have received our RSVP, or if you need further information from us, please contact TV5 by calling 989-758-2044, or e-mail us at wnem@wnem.com.

Thank you.

Nina Sika

Got a couple questions in here related to the Governor specifically, so please have a look and help me make sure it's right before we call this final, but here's the media Q&A.
Also, Terry please have a look at one of the later questions about the historic sequence. I think I captured the decision on leaving DWSD, but if you've got an official recollection, please provide. Thanks.

b

Flint Drinking Water
Media Q&A

Is the city going back to DWSD?
That's something we're leaving open. It's an option, but there are no moves at this time to do so. If it becomes something city leadership is interested in doing, the state is willing to act as a facilitator between Flint and DWSD to help come to conclusion that's best for the residents of Flint.

How did the state not see or fix this problem sooner?
Right now, we're focusing on addressing the problem at hand. Every household in the city of Flint is going to be eligible to receive a water filter. The Flint Water Treatment Plant is going to fully optimize its corrosion controls by Nov. 1. And we're going to accelerate water system improvements to address the replacement of lead service lines.

In the long term, we will work with the U.S. EPA to look at water testing protocol.

Is the water safe?
The water leaving the Flint Water Treatment Plant is safe to drink and meets federal guidelines for lead. However, we recognize some residents experience higher levels of lead in the water that comes out of their faucets because of lead service lines or lead plumbing in the home. We will expand water testing to better determine which areas have a problem; however, in the meantime, every home will receive a filter to ensure their drinking water is safe.

Does this mean Marc Edwards was right?
We aren't familiar with his testing protocol and have not seen his data. All we know is the state's data and the data Hurley Medical Center provided indicate a need to take precautionary action.

Why didn't you require corrosion controls from day one?
When the city switched water sources, they did begin using lime softening as a corrosion control. DWSD used phosphates, which is another form of corrosion control, but far from the only one. Flint was within federal protocols when it chose to use lime, and this is consistent with what every other community was required to do. The city will now use the past year's water test results to inform a final, or 'optimized' corrosion control system, and has pledged to do so by Nov. 1.

How do you feel about the state and federal testing protocols now that you know there was a problem?

DEQ is working in the community to get a better sense of the actual lead threat, and working with EPA to review our testing protocols. Beyond federal statute requirements, our goal is to protect public health. If we determine we need to make changes, we will.

Why are you requiring corrosion optimization now?
An optimized corrosion control plan will mean lead service lines and plumbing are coated with a layer of phosphates to minimize lead leaching into water. It won't eliminate the lead issue from the water, but it is expected to minimize it. The sooner the city can begin this treatment, the sooner this added level of protection will be in place.

What will you do if the schools you are testing come back with lead?
We will do whatever is necessary to protect the kids in those schools. The action steps announced today should make it clear the state puts the safety of kids and families first.

Is the Governor going to give the city the $30 million it asked for? Or the $13 million state Sen. Ananich wants to include in the budget?
This is a longer term conversation with the state Legislature. As we develop a clearer picture of Flint's lead exposure levels, it will help inform a conversation about short and long-term needs and priorities.

Why did the Governor and the state ignore city residents who have been saying there's a problem for six months?
The state has not ignored this situation. DEQ specialists have been working regularly with Flint officials, in Flint, for the past several years. We've been paying very close attention, but state regulators can't make decisions on allegations. We've been collecting and analyzing data and putting our top departmental minds on this issue. Some new information recently concerns the state enough to take action out of an abundance of caution while we investigate further.

Why did the Governor hide the fact that he was involved in distributing filters previously?
The Governor did not hide anything. He's long been a proponent of a "no blame, no credit" approach to leadership. The administration has been meeting regularly with church leaders from Flint, and he listened when many of them expressed that their memberships had serious concerns. His help to acquire the filters wasn't a media stunt, and he didn't feel compelled to claim credit for his role.

Will you meet with Marc Edwards?
We are not adverse to the idea. He has been invited to participate in the Mayor's Technical Advisory, and DEQ's staff are on that group, so we anticipate getting to dialogue with him there.

Do you trust the city's data?
The city certified its data, as all water system operators do when performing statutorily required lead and copper tests. We are reviewing their data.

Why did the Governor allow the city to switch away from DWSD initially?
The city felt compelled to make the switch. At the time, DWSD was forming the Great Lakes Water Authority, and offered Flint a contract when the city announced it would eventually leave to join KWA. The city

Has the city/Governor put residents at risk?
We don't think so. We recognize there is tremendous public concern in Flint regarding the water. The system is in compliance with federal lead and copper rules, based on testing. But we are aware that some in Flint are being exposed to higher levels of lead, and we are taking significant precautionary steps to protect the community as we look deeper into the situation.

What will the state do about my children? Lead poisoning causes irreversible damage.
Lead poisoning is serious. That is why the state has several programs that screen for lead in our communities and work to educate parents about sources of lead poisoning and ways to avoid it.

Is lead just a problem in Flint?
Lead is a long-standing problem throughout Michigan and the country. The leading source of lead poisoning is lead paint, but other pathways include soils contaminated by historic lead from car emissions and industrial processes, and sometimes from lead plumbing and service connections in old homes and neighborhoods. While all these sources are long outlawed, the lead persists in the environment and in homes.

Why isn't the Governor here today?
Governor regrets he cannot personally lead this announcement. He is out of state and the leadership of his cabinet on this issue, Nick Lyon and Dan Wyant, are presenting this plan today because the state did not want to wait to announce it is taking action. But the governor was integral in the development of the plan.

Does the Flint River have lead? Is it more corrosive than the water from DWSD?
The Flint River does not have lead. The water produced by the drinking water plant does not have lead in it. This issue is strictly about the lead in home plumbing, and that fact makes getting specific data about lead exposure a challenge.
On the issue of corrosivity: the state's drinking water program screens drinking water for 90 different contaminants, but corrosiveness it is not a drinking water standard. Operators of large systems are required to implement corrosion control measures, and Flint is doing that on a very abbreviated schedule.

If the lead is in individual homes' plumbing, how long will it take to fix this problem?
Experts estimate that the process from commencing corrosion control measures to seeing a protective coating develop throughout the system could take up to six months.

Will the move to KWA fix it, or will we still see lead?
It is entirely possible. Historic testing of Flint's system showed the presence of lead when the city was using DWSD water, and it is likely that some homes will still see some level of lead exposure after the system is optimized. The only way to eliminate lead completely is to remove lead plumbing.

Will testing start over when we move to KWA?
Yes, but the corrosion control measures will not be suspended when the city begins the process again next year. The new water source KWA will supply is the same one the Detroit system uses – Lake Huron.

Why aren't Kildee and Ananich here?
Don't know. They were briefed and invited. Today's announcement is a partnership, and we will look to our elected leadership to help protect the people of Flint.

How much are we paying all these new consultants – Dr. Wells and the EPA expert?
Dr. Wells is the state's Chief Medical Officer. Her new role in Flint is part of her duties to the state. The EPA expert similarly is participating as part of his job (SOMEBODY TELL ME IF THIS IS ACCURATE).

Did the DEQ provide any advice to the emergency manager about the switch from DWSD?
The state was opposed to Flint leaving DWSD – not because of concerns about water quality, but because at the time the city was working through its bankruptcy and the state felt the move would incur more expenses for both cities. Flint made the case it could save money in the period that KWA was constructing its pipe, and the state leaders – including the Emergency Financial Manager – eventually granted the city its request.

How long has lead been a problem in Flint? If the problem is in people's home, does that mean they have always been poisoned by this?
Lead is a historic problem, particularly in urban areas, around the nation. While the leading source of lead ingestion has always been paint, lead plumbing has always been some lesser part of the picture. This is why the U.S. EPA created the lead rule – to monitor drinking water systems and raise awareness about lead in home plumbing, and require systems to take steps to minimize lead exposure.

Why aren't you declaring a state of emergency?
The action plan announced today takes significant steps to protect the community while state experts take a closer look at the situation. Available information is concerning enough to spark precautionary protective actions, but there is insufficient hard data yet available to declare an emergency.

Why aren't you providing bottled water?
Distributing lead filters throughout the city will address lead exposure in drinking water while the state continues its investigation.

How long does it take for the system to be fully optimized once the corrosion control treatment begins?
Approximately six months. The state will direct the city to test the system again early next year to check its progress. Any resident approached to participate in the testing is strongly encouraged to participate. Not only does the opportunity offer a free home lead test, but the results help city and state regulators get a more accurate picture of what is happening. Resident participation is crucial to the success of this program, and participation in Flint has historically been a challenge.

Gov. Rick Snyder: Comprehensive action plan will help Flint residents address water concerns

Collaborative effort with state, federal and city leaders focuses on testing, assistance

FLINT, Mich. – Flint residents need to have access to safe, clean, water now and long into the future, Gov. Rick Snyder said, announcing a comprehensive action plan created with state, federal and city leaders to address concerns about drinking water.

The water leaving Flint's drinking water system is safe to drink, but some families with lead plumbing in their homes or connections might experience higher levels of lead in the water that comes out of their faucets.

The action plan focuses on increasing water testing, offering additional precautions for families with lead plumbing in their homes, and providing long-term solutions to address the city's water infrastructure challenges. The plan was created at Snyder's direction by the Michigan Department of Environmental Quality, and the Department of Health and Human Services, the U.S. Environmental Protection Agency, and the City of Flint.

"People are worried about their health and their families, and they need to have accurate information and know that help is available," Snyder said. "Today's action plan builds upon ongoing work with state and federal agencies and our partnership with city and community leaders. Together, we are working to ensure that all Flint residents can feel safe and address potential problems."

The city and the state also are working together to gather more data to ensure the water that leaves the treatment plant as well as the water that arrives in Flint homes is safe for all residents. The plan includes:

- Testing in Flint public schools immediately to ensure that drinking water is safe, with testing also available at no cost to any other school in Flint.
- Expanding health exposure testing of individual homes.
- Offering free water testing to Flint residents to assure their drinking water is safe.
- Accelerating an optimization of corrosion controls in the Flint drinking water system.
- Expanding a Safe Drinking Water Technical Advisory Committee to ensure the best technology, practices and science are being followed by adding an expert from the Environmental Protection Agency's Office of Research and Development to the group.
- Accelerating water system improvements to address replacing lead service lines.
- Naming Dr. Eden Wells, chief medical executive for the Michigan Department of Health and Human Services, as the Flint drinking water public health adviser.
- Providing water filters to residents with concerns or who are included in state assistance programs.
- Creating a comprehensive lead education program to make sure residents have detailed information about how to protect themselves and their homes.
- Expediting the completion of the Karegnondi Water Authority pipeline.

Residents can have their water tested by calling 810-787-6537 and pressing 1, or emailing flintwater@cityofflint.com. Additional information is available at www.michigan.gov/flintwater.
State leaders have been working closely with state and federal lawmakers to tap resources at all levels of government to address concerns.

State health experts said there has been an increase in elevated childhood blood lead levels in some specific communities. Initial analysis of MDHHS data found that blood lead levels of children in Flint have followed an expected seasonal trend. While this analysis for Flint as a whole remains true, a comprehensive and detailed review breaking down data by ZIP codes with the city revealed that MDHHS data is consistent with a study presented recently by Hurley Children's Hospital.

"While we cannot conclusively say that the water source change is the sole cause of the increase, this analysis supports our efforts as we take active steps to reduce all potential lead exposures in Flint," MDHHS Director Nick Lyon said. "As part of this, we are working closely with our public and private partners to provide Flint residents on MDHHS assistance programs with water filters and educate families about the steps they can take to reduce all lead exposures in their home."

As a part of the action plan, MDHHS is making National Sanitation Foundation certified water filters available to clients who are active Family Independence Program, Food Assistance Program, Child Development and Care or Social Security Insurance recipients.

"This action plan offers concrete steps we will take in a local, state and federal partnership to ensure all Flint residents have safe water to drink," DEQ Director Dan Wyant said. "The DEQ will work closely with the city to gather further data to ensure the water that leaves Flint's system as well as the water that arrives in Flint homes is safe to drink."

> > The latest from Lt Roach...
> >
> > The County Health Department is expecting to receive 4,000 filters sometime tonight. The filters were secured through the United Way and are being trucked in (cost appox $80,000). Lt Roach was unable to determine where they are being brought in from. They are hoping to get $40,000 more in donations to buy more. The Health Department plans to distribute filters tomorrow at 1:00 pm at UM Flint. The recipients will also be taught how to use filters. Lt Roach was told there are approximately 15,000 homes in the city of Flint with corrosive distribution pipes. The city water department has a list of the homes with details, but information is on paper index cards, not in a database or spreadsheet. They would have to manually sort through cards, so this approach is not practical. The current plan is to distribute filters by priorities being similar to those used during H1N1: pregnant women, women breast feeding/bottle feeding, residences with and children under 5 years. All must be City of Flint residents; credentials will be

checked to make sure they are residents and qualify. A WIC list may be utilized along with a current list of residences on the lead program The Health Department hopes to accomplish work with 15-20 employees and possibly another 20 volunteers. They plan to distribute using two car lanes to avoid having recipients exit cars.

No state resources have been requested.

Would suggest the following edits...

Did the DEQ provide any advice to the emergency manager about the switch from DWSD?
The state was opposed to Flint leaving DWSD – not because of concerns about water quality, but because at the time the city of Detroit was working through its bankruptcy and the state felt the move would incur more expenses for both Detroit and Flint. The the-emergency manager, mayor and city council approved the move to KWA and the state approved the transition. Following the city's decision to move to KWA, DWSD canceled flints contract effective April of 2014. The city faced limited options for its water source following the cancellation of its DWSD contract.

On Oct 1, 2015, at 6:19 PM, Murray, David (GOV) <MurrayD1@michigan.gov> wrote:

Gov. Rick Snyder: Comprehensive action plan will help Flint residents address water concerns

Collaborative effort with state, federal and city leaders focuses on testing, assistance

FLINT, Mich. – Flint residents need to have access to safe, clean, water now and long into the future, Gov. Rick Snyder said, announcing a comprehensive action plan created with state, federal and city leaders to address concerns about drinking water.

The water leaving Flint's drinking water system is safe to drink, but some families with lead plumbing in their homes or connections might experience higher levels of lead in the water that comes out of their faucets.

The action plan focuses on increasing water testing, offering additional precautions for families with lead plumbing in their homes, and providing long-term solutions to address the city's water infrastructure challenges. The plan was created at Snyder's direction by the Michigan Department of Environmental Quality, and the Department of Health and Human Services, the U.S. Environmental Protection Agency, and the City of Flint.

"People are worried about their health and their families, and they need to have accurate information and know that help is available," Snyder said. "Today's action plan builds upon ongoing work with state and federal agencies and our partnership with city and community leaders. Together, we are working to ensure that all Flint residents can feel safe and address potential problems."

The city and the state also are working together to gather more data to ensure the water that leaves the treatment plant as well as the water that arrives in Flint homes is safe for all residents. The plan includes:

- Testing in Flint public schools immediately to ensure that drinking water is safe, with testing also available at no cost to any other school in Flint.
- Expanding health exposure testing of individual homes.
- Offering free water testing to Flint residents to assure their drinking water is safe.
- Accelerating an optimization of corrosion controls in the Flint drinking water system.
- Expanding a Safe Drinking Water Technical Advisory Committee to ensure the best technology, practices and science are being followed by adding an expert from the Environmental Protection Agency's Office of Research and Development to the group.
- Accelerating water system improvements to address replacing lead service lines.
- Naming Dr. Eden Wells, chief medical executive for the Michigan Department of Health and Human Services, as the Flint drinking water public health adviser.
- Providing water filters to residents with concerns or who are included in state assistance programs.
- Creating a comprehensive lead education program to make sure residents have detailed information about how to protect themselves and their homes.
- Expediting the completion of the Karegnondi Water Authority pipeline.

Residents can have their water tested by calling 810-787-6537 and pressing 1, or emailing flintwater@cityofflint.com. Additional information is available at www.michigan.gov/flintwater. State leaders have been working closely with state and federal lawmakers to tap resources at all levels of government to address concerns.

State health experts said there has been an increase in elevated childhood blood lead levels in some specific communities. Initial analysis of MDHHS data found that blood lead levels of children in Flint have followed an expected seasonal trend. While this analysis for Flint as a whole remains true, a comprehensive and detailed review breaking down data by ZIP codes with the city revealed that MDHHS data is consistent with a study presented recently by Hurley Children's Hospital.

"While we cannot conclusively say that the water source change is the sole cause of the increase, this analysis supports our efforts as we take active steps to reduce all potential lead exposures in Flint," MDHHS Director Nick Lyon said. "As part of this, we are working closely with our public and private partners to provide Flint residents on MDHHS assistance programs with water filters and educate families about the steps they can take to reduce all lead exposures in their home."

As a part of the action plan, MDHHS is making National Sanitation Foundation certified water filters available to clients who are active Family Independence Program, Food Assistance Program, Child Development and Care or Social Security Insurance recipients.

"This action plan offers concrete steps we will take in a local, state and federal partnership to ensure all Flint residents have safe water to drink," DEQ Director Dan Wyant said. "The DEQ will work closely with the city to gather further data to ensure the water that leaves Flint's system as well as the water that arrives in Flint homes is safe to drink."

Subject: RE: Friday Press Conference

Importance: High

That's absolutely right, Damon.

You and the station should have gotten a media advisory from the DEQ and DHHS teams. A cut and paste version is below just in case. This event is for media only.

Also, for your planning purposes only, we're looking at hosting a conference call with the Governor to walk through some highlights on a fully EMBARGOED (all hold and not reported/aired until the press conference begins) basis. Please let me know if that's workable and WJRT agrees to that. And if so, who would be representing the station.

Oct. 1, 2015

Michigan leaders to announce action plan for Flint drinking water

Friday, Oct. 2 at 1:30 p.m.
Local, state and federal leaders will host a press conference to announce a comprehensive action plan for addressing drinking water concerns in Flint. Participants will include:

- Harvey Hollins, Director of the Office of Urban Initiatives for Gov. Rick Snyder
- Dan Wyant, Director for the Michigan Department of Environmental Quality
- Nick Lyon, Director for the Michigan Department of Health and Human Services
- Dr. Eden Wells, Chief Medical Executive for the Michigan Department of Health and Human Services
- Dayne Walling, Mayor of Flint
- Other local, state and federal officials

Location:
Kettering University, Innovation Center
1300 Bluff St.
Flint, MI 48504

This is a media event open to credentialed news media only. Media who plan to attend this event should RSVP by noon Friday. Contact Rosemarie Olszewski at 517-284-6700 or olszewskir@michigan.gov.

Michigan leaders to announce action plan for Flint drinking water

Friday, Oct. 2 at 1:30 p.m.
Local, state and federal leaders will host a press conference to announce a comprehensive action plan for addressing drinking water concerns in Flint. Participants will include:
• Harvey Hollins, Director of the Office of Urban Initiatives for Gov. Rick Snyder
• Dan Wyant, Director for the Michigan Department of Environmental Quality
• Nick Lyon, Director for the Michigan Department of Health and Human Services
• Dr. Eden Wells, Chief Medical Executive for the Michigan Department of Health and Human Services
• Dayne Walling, Mayor of Flint
• Other local, state and federal officials

Location:
Kettering University, Innovation Center
1300 Bluff St.
Flint, MI 48504

This is a media event open to credentialed news media only. Media who plan to attend this event should RSVP by noon Friday. Contact Rosemarie Olszewski at 517-284-6700 or olszewskir@michigan.gov.

Subject: RE: PLEASE review: Draft MLive guest column

I think you will want to modify the filter language to now reflect the fact that filters will be provided to all Flint residents and not just assistance program folks with the $1 million Dan and Nick will be announcing.

Subject: PLEASE review: Draft MLive guest column

Team, this is a draft guest column for MLive, building on the draft that Brad wrote – but with changes to focus on the action plan. I tried a more people-centered approach, thinking that the audience here is the residents. It's less defensive. It's also shorter. Please let me know if we need to make any changes, or if we are missing information you think should be in there.

Dave

By Nick Lyon and Dan Wyant

People in Flint – and all of Michigan – need to know that that then they turn on the faucet, the water they drink and bathe their children with, is safe and clean.

Flint residents have been hearing concerning news about the municipal water supply for more than a year. We're working to help Flint leaders address and fix short- and long-term problems with the city's water infrastructure.

A recent announcement by local doctors that blood lead levels are rising in children residing in Flint's most at-risk ZIP codes added to the state's knowledge and sparked some additional precautionary measures.

Experts are still working the data to determine exactly what it means, but the state takes lead seriously.

State agencies also are working in collaboration with the federal and Flint leaders to get residents accurate information to ease their fears.

Gov. Rick Snyder directed the Michigan Department of Environmental Quality and the Department of Health and Human Services to work with the U.S. Environmental Protection Agency to create a comprehensive action plan to build our knowledge about lead in Flint, better protect the community and restore public confidence in the regulatory framework.
We're testing the water in all of our schools so we know that our children are safe.

We're testing residences at no charge and expanding health exposure testing so families can be confident about the water coming into their homes.

We're providing faucet filters to people who are in state assistance programs.

We're accelerating corrosion controls in the Flint drinking water system.

We're increasing the pace of water system improvements to address replacing lead service lines.

We're expediting the completion of the Karegnondi Water Authority pipeline.

We're expanding the Safe Drinking Water Technical Advisory Committee to ensure the best technology, practices and science are being followed by adding an expert from the U.S. EPA's Office of Research and Development.

The DHHS's chief medical executive, Dr. Eden Wells, has been designated Flint's drinking water public health adviser.

We're also boosting a comprehensive lead education program to make sure residents have detailed information about how to protect themselves and their homes.

That's key, because the lead in question does not come from the Flint River. The water leaving the drinking water plant is clean and safe. The water traveling through the distribution system also is free of lead.

The lead issues happen when the water reaches homes that have lead service lines or lead plumbing. This is important to know for two reasons: Contamination happens at the homeowner level, it is very difficult to track precisely.

And, the longer water sits in lead pipes, the more lead it takes on, so homes on the same block might have very different results from lead testing, based on what kind of plumbing they have and how homeowners use their water.

All of the measures in the action plan build on efforts that have been underway for the last year. State agencies have been working with the city on a variety of issues and approaches to correct Flint's water infrastructure challenges.

That's because the health and safety of Flint residents – and people across our state – is our first priority.

More information about the action plan and lead is available at Michigan.gov/FlintDrinkingWater. People interested in getting their homes tested for free should call (810) 787-653, then press 1.

Nick Lyon is the director of the Michigan Department of Health and Human Services and Dan Wyant is the director of the Michigan Department of Environmental Quality.

Subject: HIGH PRIORITY: Updated Flint water action plan
Importance: High

Hi all –

Attached are several items pulled together to help announce the new comprehensive action plan related to Flint water tomorrow. This build upon past efforts and as aimed to be a real collaborative effort with local, state and federal agencies, along with city and community leaders. These items are:

- News release
- Infographics – one to summarize action plan and one to help highlight the tips for Flint residents
- High level points

The Governor, along with Dan Wyant, Nick Lyon, and Dr. Eden Wells are slated to do an embargoed media conference call with select reporters at 11:15 a.m. tomorrow.

This will be followed by a 1:30 p.m. press conference in Flint led by Directors Wyant and Lyon, moderated by Harvey, and including Dr. Wells and Flint Mayor Dayne Walling. EPA Region 5 Administrator Susan Headman dropped out late

today due to some pending litigation. It's possible that Cong. Kildee and/or State Sen. Anaich and State Reps. Neely and Phelps may be participating as well.

There will also be a clearinghouse of Flint water information available at a new web site – www.michigan.gov/FlintWater. It will be live at 1 p.m. tomorrow.

Please review and let us know of any Qs, concerns, last edits, of if anything else is needed at all.

They are going through last review and refinement now. Please do not share materials until we know they are final.

Thanks much,
SW

Blood Lead Levels in Flint Talking Points
October 1, 2015

- Initial analysis of MDHHS data found that blood lead levels (BLLs) of children in Flint have followed an expected seasonal trend; due to small numbers further analysis was initiated.
- While this analysis of blood lead levels in Flint as a whole remains true, after a comprehensive and detailed review down to the zip code level, we have found that the state analysis is consistent with that presented by Hurley.
- Director Lyon is working closely with DEQ and the administration to take active steps to reduce all potential lead exposures in Flint, and across the state.
- Our Chief Medical Executive has been in communication with the lead investigator at Hurley Children's Hospital, and we continue to work with Hurley, the city of Flint, local and state leaders to verify and analyze data trends.
- Zip code-level data does show that there has been an increase in elevated childhood blood lead levels in specific communities.
    - This does not conclusively mean that the water source change is the sole cause of the increase, but data does show an association.
    - There is an increased proportion of children with elevated Blood Levels (ELBs) in several zip codes, particularly 03 and 04. These appear to have increased over the last 1.5 years.
    - Lead exposure can occur from a number of different sources (such as paint, gasoline, solder, and consumer products) and through different pathways (such as air, food, water, dust, and soil).
    - Although there are several exposure sources, lead-based paint is still the most widespread and dangerous high-dose source of lead exposure for young children in the US and Michigan.
- We reviewed MDHHS statewide data using the same methodology used by Hurley, looking at our numbers by zip code and age ranges, and filtering out non-Flint children.
- Routine surveillance of blood lead levels does not analyze data down to the zip code level. Detailed analysis like this occurs when there is reason to focus in on precise locations or populations.
- MDHHS will be working closely with the Michigan Department of Environmental Quality, Hurley Children's Hospital, the Genesee County Health Department, and community organizations to initiate further action steps.
- We understand that cost may be a barrier to following the recommendations of the local health department. We are actively working with public and private partners to make resources available to those who may need assistance.
- MDHHS is recommending that residents follow the Public Health Advisory issued by the Genesee County Health Department, as well as take further steps to reduce exposures to all forms of lead in and around their homes.

MDHHS Stats and Facts

- 'High Risk' Zip codes (48503 and 48504)
    - Blood lead level rates among children under six years of age in the high risk zip codes (48503, 48504) were 2.7 times higher than the rest of Genesee County before the switch to Flint River Water.
    - After the switch to Flint River Water, rates in the high risk Zip codes were 3.2 times that of the rest of Genesee County.
- Other Zip codes in Flint
    - Rates of elevated blood lead levels among children under six years of age in other parts of the city of Flint were 2 times that of the rest of Genesee County before the switch to Flint River Water.
    - The magnitude of the elevated rate remained roughly the same during the period after the water source switch.
- Lead abatement through MDHHS was federally funded up until FY14 when Michigan began providing additional funds to abate homes.
- In FY14, $1.25M General Fund was added. In FY15, General Fund was bumped up to $1.75M and FY16, General Fund remains at $1.75M.

Water Filters

- Our first action item is to work closely with our public and private partners to provide water filters to Flint residents and MDHHS clients.
- To meet this priority, the governor has identified one million dollars in state funding to purchase water filters for Flint residents.
- Given the questions and concerns regarding the change in water source in Flint, MDHHS has authorized the use of emergency services funding to provide water filters for MDHHS clients receiving assistance in the city of Flint.
- We would like to pursue a plan for clients who are active Family Independence Program (FIP), Food Assistance Program (FAP), Child Development and Care (CDC) or Social Security Insurance (SSI) to come to the local MDHHS offices in Flint to obtain a waiver that they could then take to an identified Meijer or Walmart store to obtain water filters that are National Sanitation Foundation (NSF) certified to remove lead and ANSI Standard 53.
- We are in discussions with local retailers and will share additional information about where residents can go to purchase filters as soon as those details have been finalized.
- MDHHS currently serves approximately 25,000 households in Flint but we would anticipate processing approximately 5,000 requests for vouchers a week.

Reducing and Removing Lead Exposure

- In housing built before 1978, it can be assumed that the paint has lead unless tests show otherwise.

- Make sure your child does not have access to peeling paint or chewable surfaces painted with lead-based paint.
- Children and pregnant women should not be present in housing built before 1978 that is undergoing renovation. They should not participate in activities that disturb old paint or in cleaning up paint debris after work is completed.
- Create barriers between living/play areas and lead sources. Until environmental clean-up is completed, you should clean and isolate all sources of lead.
    - Close and lock doors to keep children away from chipping or peeling paint on walls. You can also apply temporary barriers such as contact paper or duct tape, to cover holes in walls or to block children's access to other sources of lead.
- Regularly wash children's hands and toys. Hands and toys can become contaminated from household dust or exterior soil. Both are known lead sources.
- Regularly wet-mop floors and wet-wipe window components. Because household dust is a major source of lead, you should wet-mop floors and wet-wipe horizontal surfaces every 2-3 weeks.
    - Windowsills and wells can contain high levels of leaded dust. They should be kept clean. If feasible, windows should be shut to prevent abrasion of painted surfaces or opened from the top sash.
- Take off shoes when entering the house to prevent bringing lead-contaminated soil in from outside.
- Prevent children from playing in bare soil; if possible, provide them with sandboxes. Plant grass on areas of bare soil or cover the soil with grass seed, mulch, or wood chips, if possible.
    - Until the bare soil is covered, move play areas away from bare soil and away from the sides of the house. If you have a sandbox, cover the box when not in use to prevent cats from using it as a litter box. That will help protect children from exposure to animal waste.
- Avoid using makeup, containers, cookware, or tableware to store or cook foods or liquids that are not shown to be lead free.
- Remove recalled toys and toy jewelry immediately from children.
- Use only cold water from the tap for drinking, cooking, and making baby formula. Hot water is more likely to contain higher levels of lead. Most of the lead in household water usually comes from the plumbing in your house, not from the local water supply.
- Shower and change clothes after finishing a task that involves working with lead-based products such as stained glass, making bullets, or using a firing range.

WIC Children

- There are 855 infants participating in WIC in Flint.
- We are working with partners at the United Way to ensure that WIC families have access to water filters and bottled water.

- In homes with infants on WIC, if the household has documentation from an official source of unsanitary water supply issues, that family may be eligible to receive ready-to-feed formula. Families should contact WIC to see if they are eligible.
- Each household would have to be looked at on an individual basis.
- WIC cannot cover bottled water.

Background

- The results of the Hurley Children's Hospital were reviewed by MDHHS after the study was released last week.
- The analysis that Hurley conducted was different from the initial MDHHS data regarding blood lead levels in Flint.
- MDHHS initial data looked at the entire blood lead levels for the Flint area for the past five years and showed the annual seasonal trends in the area.
- Seasonal exposure is higher in the summer for a variety of reasons including children playing outside in the soil, and when windows are open and lead paint is more likely to be in the air. Further, seasonal variations in water can occur due to changes in temperature, pH , and other factors

Hi there Dan –

Per earlier conversation, below is information for a media conference call with Gov. Snyder and Cabinet leaders – MI Dept of Environmental Quality Director Dan Wyant of the, MI Dept of Health & Human Services Director Nick Lyon of the, and Dr. Eden Wells, the state's Chief Medical Executive – to outline a comprehensive action plan to further address Flint water concerns.

They will also be available to answer Qs.

As agreed by you and WXYZ team, this information is fully embargoed until when the 1:30 p.m. press conference later today in Flint begins.

SPECIFIC CALL-IN DETAILS:
Topic: Flint water action plan
Date: Friday, Oct. 2
Time: 11:15 a.m.
Conference Line call-in number: **PPI**
Conference line passcode: **PPI**
** To ask a question during that portion of the call, please press "0." (but please refrain from pressing zero until opening remarks are completed to help ensure you don't miss any of the details).

****NOTE**:** This invitation is for planning purposes only and meant for you and/or your outlet as there are a limited number of participant lines. Please let us know if you wish to have someone else participate so we can work to accommodate.

Please let us know if who from CH 7 plans to participate or if you need anything else at all in interim.

Thanks and best,
SW

This version includes the additional information about the filters.

By Nick Lyon and Dan Wyant

People in Flint – and all of Michigan – need to know that that then they turn on the faucet, the water they drink and bathe their children with, is safe and clean.

Flint residents have been hearing concerning news about the municipal water supply for more than a year. We're working to help Flint leaders address and fix short- and long-term problems with the city's water infrastructure.

A recent announcement by local doctors that blood lead levels are rising in children residing in Flint's most at-risk ZIP codes added to the state's knowledge and sparked some additional precautionary measures.

Experts are still working the data to determine exactly what it means, but the state takes lead seriously.

State agencies also are working in collaboration with the federal and Flint leaders to get residents accurate information to ease their fears.

Gov. Rick Snyder directed the Michigan Department of Environmental Quality and the Department of Health and Human Services to work with the U.S. Environmental Protection Agency to create a comprehensive action plan to build our knowledge about lead in Flint, better protect the community and restore public confidence in the regulatory framework.
We're testing the water in all of our schools so we know that our children are safe.

We're testing residences at no charge and expanding health exposure testing so families can be confident about the water coming into their homes.

We're providing faucet filters to Flint homes. The state is investing $1 million on this effort, building on the generosity and support of community groups and donors.
We're accelerating corrosion controls in the Flint drinking water system.

We're increasing the pace of water system improvements to address replacing lead service lines.

We're expediting the completion of the Karegnondi Water Authority pipeline.

We're expanding the Safe Drinking Water Technical Advisory Committee to ensure the best technology, practices and science are being followed by adding an expert from the U.S. EPA's Office of Research and Development.

The DHHS's chief medical executive, Dr. Eden Wells, has been designated Flint's drinking water public health adviser.

We're also boosting a comprehensive lead education program to make sure residents have detailed information about how to protect themselves and their homes.

That's key, because the lead in question does not come from the Flint River. The water leaving the drinking water plant is clean and safe. The water traveling through the distribution system also is free of lead.

The lead issues happen when the water reaches homes that have lead service lines or lead plumbing. This is important to know for two reasons: Contamination happens at the homeowner level, it is very difficult to track precisely.

And, the longer water sits in lead pipes, the more lead it takes on, so homes on the same block might have very different results from lead testing, based on what kind of plumbing they have and how homeowners use their water.

All of the measures in the action plan build on efforts that have been underway for the last year. State agencies have been working with the city on a variety of issues and approaches to correct Flint's water infrastructure challenges.

That's because the health and safety of Flint residents – and people across our state – is our first priority.

More information about the action plan and lead is available at Michigan.gov/FlintDrinkingWater. People interested in getting their homes tested for free should call (810) 787-653, then press 1. Nick Lyon is the director of the Michigan Department of Health and Human Services and Dan Wyant is the director of the Michigan Department of Environmental Quality.

Subject: PLEASE review: Draft MLive guest column

Team, this is a draft guest column for MLive, building on the draft that Brad wrote – but with changes to focus on the action plan. I tried a more people-centered approach, thinking that the audience here is the residents. It's less defensive. It's also shorter. Please let me know if we need to make any changes, or if we are missing information you think should be in there.

Dave

By Nick Lyon and Dan Wyant

People in Flint – and all of Michigan – need to know that that then they turn on the faucet, the water they drink and bathe their children with, is safe and clean.

Flint residents have been hearing concerning news about the municipal water supply for more than a year. We're working to help Flint leaders address and fix short- and long-term problems with the city's water infrastructure.

A recent announcement by local doctors that blood lead levels are rising in children residing in Flint's most at-risk ZIP codes added to the state's knowledge and sparked some additional precautionary measures.

Experts are still working the data to determine exactly what it means, but the state takes lead seriously.

State agencies also are working in collaboration with the federal and Flint leaders to get residents accurate information to ease their fears.

Gov. Rick Snyder directed the Michigan Department of Environmental Quality and the Department of Health and Human Services to work with the U.S. Environmental Protection Agency to create a comprehensive action plan to build our knowledge about lead in Flint, better protect the community and restore public confidence in the regulatory framework.
We're testing the water in all of our schools so we know that our children are safe.

We're testing residences at no charge and expanding health exposure testing so families can be confident about the water coming into their homes.

We're providing faucet filters to people who are in state assistance programs.

We're accelerating corrosion controls in the Flint drinking water system.

We're increasing the pace of water system improvements to address replacing lead service lines.

We're expediting the completion of the Karegnondi Water Authority pipeline.

We're expanding the Safe Drinking Water Technical Advisory Committee to ensure the best technology, practices and science are being followed by adding an expert from the U.S. EPA's Office of Research and Development.

The DHHS's chief medical executive, Dr. Eden Wells, has been designated Flint's drinking water public health adviser.

We're also boosting a comprehensive lead education program to make sure residents have detailed information about how to protect themselves and their homes.

That's key, because the lead in question does not come from the Flint River. The water leaving the drinking water plant is clean and safe. The water traveling through the distribution system also is free of lead.

Nancy -- Please have Nick use these!

With the evolving filter situation, the talking points have been updated. Please note that in Nick's talking points, State Disability Assistance (SDA) has been added to the list of programs that will be eligible for filters.

The general talking points have been updated as well.

Thank you,
Jennifer

Director Nick Lyon Flint Water Press Conference Talking Points
October 2, 2015

- In addition to the points raised by DEQ in protecting the health of Flint residents, the Michigan Department of Health and Human services have also begun taking steps to reduce and prevent lead exposure for Flint families.
- Our first action item is to work closely with our public and private partners to provide water filters to Flint residents and our MDHHS clients in Flint.
- To meet this priority, the governor has identified one million dollars in state funding to purchase water filters for Flint residents.
- Additionally, through department emergency funds, we are working to provide National Sanitation Foundation (NSF) certified water filters to residents who are active Family Independence Program (FIP), Food Assistance Program (FAP), Child Development and Care (CDC), State Disability Assistance (SDA) or Social Security Insurance (SSI) recipients.
- We have already begun working with the local United Way to provide filters to residents receiving WIC benefits.
- We are in discussions with local retailers and will share additional information about where residents can go to purchase filters as soon as those details have been finalized.
- Our next step in the state action plan is to educate families about the steps they can take to reduce all lead exposures in their home.
- Lead exposure can occur from a number of different sources such as paint, gasoline, solder, and consumer products and through different pathways such as air, food, water, dust, and soil.
- Although there are several exposure sources, lead-based paint is still the most widespread and dangerous high-dose source of lead exposure for young children in the US and Michigan.
- We will be working to educate all Flint families on steps that they can take to reduce any and all lead exposures in and around their homes.
- And lastly, Gov. Rick Snyder has named Dr. Eden Wells as the Flint Drinking Water Public Health Advisor.
- In addition to the action plan, zip code-level data does show that there has been an increase in elevated childhood blood lead levels in specific communities.
- Initial analysis of MDHHS data found that blood lead levels of children in Flint have followed an expected seasonal trend.
- While this analysis for Flint as a whole remains true, after a comprehensive and detailed review down to the zip code level, MDHHS data state analysis is consistent with that presented by Hurley Children's Hospital.
- We cannot conclusively say that the water source change is the sole cause of the increase, but this analysis supports our efforts as we take active steps to reduce all potential lead exposures in Flint.

- I'd like to now ask Dr. Eden Wells, MDHHS Chief Medical Executive and the Flint Drinking Water Public Health Advisor to provide an overview of the data analysis.

Blood Lead Levels in Flint Talking Points
October 1, 2015

- Initial analysis of MDHHS data found that blood lead levels (BLLs) of children in Flint have followed an expected seasonal trend; due to small numbers further analysis was initiated.
- While this analysis of blood lead levels in Flint as a whole remains true, after a comprehensive and detailed review down to the zip code level, we have found that the state analysis is consistent with that presented by Hurley.
- Director Lyon is working closely with DEQ and the administration to take active steps to reduce all potential lead exposures in Flint, and across the state.
- Our Chief Medical Executive has been in communication with the lead investigator at Hurley Children's Hospital, and we continue to work with Hurley, the city of Flint, local and state leaders to verify and analyze data trends.
- Zip code-level data does show that there has been an increase in elevated childhood blood lead levels in specific communities.
    - This does not conclusively mean that the water source change is the sole cause of the increase, but data does show an association.
    - There is an increased proportion of children with elevated Blood Levels (ELBs) in several zip codes, particularly 03 and 04. These appear to have increased over the last 1.5 years.
    - Lead exposure can occur from a number of different sources (such as paint, gasoline, solder, and consumer products) and through different pathways (such as air, food, water, dust, and soil).
    - Although there are several exposure sources, lead-based paint is still the most widespread and dangerous high-dose source of lead exposure for young children in the US and Michigan.
- We reviewed MDHHS statewide data using the same methodology used by Hurley, looking at our numbers by zip code and age ranges, and filtering out non-Flint children.
- Routine surveillance of blood lead levels does not analyze data down to the zip code level. Detailed analysis like this occurs when there is reason to focus in on precise locations or populations.
- MDHHS will be working closely with the Michigan Department of Environmental Quality, Hurley Children's Hospital, the Genesee County Health Department, and community organizations to initiate further action steps.
- We understand that cost may be a barrier to following the recommendations of the local health department. We are actively working with public and private partners to make resources available to those who may need assistance.
- MDHHS is recommending that residents follow the Public Health Advisory issued by the Genesee County Health Department, as well as take further steps to reduce exposures to all forms of lead in and around their homes.

MDHHS Stats and Facts

- 'High Risk' Zip codes (48503 and 48504)
    - Blood lead level rates among children under six years of age in the high risk zip codes (48503, 48504) were 2.7 times higher than the rest of Genesee County before the switch to Flint River Water.
    - After the switch to Flint River Water, rates in the high risk Zip codes were 3.2 times that of the rest of Genesee County.
- Other Zip codes in Flint
    - Rates of elevated blood lead levels among children under six years of age in other parts of the city of Flint were 2 times that of the rest of Genesee County before the switch to Flint River Water.
    - The magnitude of the elevated rate remained roughly the same during the period after the water source switch.
- Lead abatement through MDHHS was federally funded up until FY14 when Michigan began providing additional funds to abate homes.
- In FY14, $1.25M General Fund was added. In FY15, General Fund was bumped up to $1.75M and FY16, General Fund remains at $1.75M.

Water Filters

- Our first action item is to work closely with our public and private partners to provide water filters to Flint residents and MDHHS clients.
- To meet this priority, the governor has identified one million dollars in state funding to purchase water filters for Flint residents.
- Given the questions and concerns regarding the change in water source in Flint, MDHHS has authorized the use of emergency services funding to provide water filters for MDHHS clients receiving assistance in the city of Flint.
- We are pursuing a plan for clients who are active Family Independence Program (FIP), Food Assistance Program (FAP), Child Development and Care (CDC), State Disability Assistance (SDA), State Disability Assistance (SDA), or Social Security Insurance (SSI) to that they can obtain filters that are National Sanitation Foundation (NSF) certified to remove lead and ANSI Standard 53.
- We are in discussions with local retailers and will share additional information about where residents can go to purchase filters as soon as those details have been finalized.

- MDHHS currently serves approximately 25,000 households in Flint.

Reducing and Removing Lead Exposure

- In housing built before 1978, it can be assumed that the paint has lead unless tests show otherwise.
- Make sure your child does not have access to peeling paint or chewable surfaces painted with lead-based paint.

- Children and pregnant women should not be present in housing built before 1978 that is undergoing renovation. They should not participate in activities that disturb old paint or in cleaning up paint debris after work is completed.
- Create barriers between living/play areas and lead sources. Until environmental clean-up is completed, you should clean and isolate all sources of lead.
    - Close and lock doors to keep children away from chipping or peeling paint on walls. You can also apply temporary barriers such as contact paper or duct tape, to cover holes in walls or to block children's access to other sources of lead.
- Regularly wash children's hands and toys. Hands and toys can become contaminated from household dust or exterior soil. Both are known lead sources.
- Regularly wet-mop floors and wet-wipe window components. Because household dust is a major source of lead, you should wet-mop floors and wet-wipe horizontal surfaces every 2-3 weeks.
    - Windowsills and wells can contain high levels of leaded dust. They should be kept clean. If feasible, windows should be shut to prevent abrasion of painted surfaces or opened from the top sash.
- Take off shoes when entering the house to prevent bringing lead-contaminated soil in from outside.
- Prevent children from playing in bare soil; if possible, provide them with sandboxes. Plant grass on areas of bare soil or cover the soil with grass seed, mulch, or wood chips, if possible.
    - Until the bare soil is covered, move play areas away from bare soil and away from the sides of the house. If you have a sandbox, cover the box when not in use to prevent cats from using it as a litter box. That will help protect children from exposure to animal waste.
- Avoid using makeup, containers, cookware, or tableware to store or cook foods or liquids that are not shown to be lead free.
- Remove recalled toys and toy jewelry immediately from children.
- Use only cold water from the tap for drinking, cooking, and making baby formula. Hot water is more likely to contain higher levels of lead. Most of the lead in household water usually comes from the plumbing in your house, not from the local water supply.
- Shower and change clothes after finishing a task that involves working with lead-based products such as stained glass, making bullets, or using a firing range.

WIC Children

- There are 855 infants participating in WIC in Flint.
- We are working with partners at the United Way to ensure that WIC families have access to water filters and bottled water.
- In homes with infants on WIC, if the household has documentation from an official source of unsanitary water supply issues, that family may be eligible to receive ready-to-feed formula. Families should contact WIC to see if they are eligible.

- Each household would have to be looked at on an individual basis.
- WIC cannot cover bottled water.

Background

- The results of the Hurley Children's Hospital were reviewed by MDHHS after the study was released last week.
- The analysis that Hurley conducted was different from the initial MDHHS data regarding blood lead levels in Flint.
- MDHHS initial data looked at the entire blood lead levels for the Flint area for the past five years and showed the annual seasonal trends in the area.
- Seasonal exposure is higher in the summer for a variety of reasons including children playing outside in the soil, and when windows are open and lead paint is more likely to be in the air. Further, seasonal variations in water can occur due to changes in temperature, pH , and other factors

Importance: High

Hi there Dan –

Per earlier conversation, below is information for a media conference call with Gov. Snyder and Cabinet leaders – MI Dept of Environmental Quality Director Dan Wyant of the, MI Dept of Health & Human Services Director Nick Lyon of the, and Dr. Eden Wells, the state's Chief Medical Executive – to outline a comprehensive action plan to further address Flint water concerns.

They will also be available to answer Qs.

As agreed by you and WXYZ team, this information is fully embargoed until when the 1:30 p.m. press conference later today in Flint begins.

SPECIFIC CALL-IN DETAILS:
Topic: Flint water action plan
Date: Friday, Oct. 2
Time: 11:15 a.m.
Conference Line call-in number: PPI
Conference line passcode: PPI
** To ask a question during that portion of the call, please press "0." (but please refrain from pressing zero until opening remarks are completed to help ensure you don't miss any of the details).

****NOTE**:** This invitation is for planning purposes only and meant for you and/or your outlet as there are a limited number of participant lines. Please let us know if you wish to have someone else participate so we can work to accommodate.

Please let us know if who from CH 7 plans to participate or if you need anything else at all in interim.

Thanks and best,
SW

Subject: Flint water filter paragraph for website

Jenn,

I'd like to add information about the filters on the website, but I want to make sure that I understand the information.

Can you review the paragraph below and make changes as needed so that this information is accurate?

"To ensure safe drinking water, the state of Michigan is providing water filters for free.

1) Governor Snyder has identified $1 million in funding to secure filters for Flint residents.
2) The Michigan Department of Health and Human Services has identified funds to provide filters for free to Flint DHHS clients in 25,000 households.
3) United Way and community partners are working to secure additional filters and distribute them.

Please check mi.gov/FlintWater for regular updates regarding water filters for Flint residents."

Thanks for your help

Josh

Subject: Re: Flint water filter paragraph for website

Hi Josh:

2nd point -- can we say "The Michigan Department of Health and Human Services will provide filters for free to Flint DHHS clients in 25,000 households."?

We would like to stay away from "identified funds" until the amount is finalized.

One other thought -- should we put an asterisk after Flind DHHS Clients* and list which program participants are eligible as a footnote at the end? I'll leave it up to you, but those eligible are those who were former DHS clients -- not necessarily all MDHHS clients. We can clarify if asked but it might be better to avoid initial confusion -- we wouldn't want to mislead all HMP enrollees, for example.

The eligible programs are: Family Independence Program (FIP), Food Assistance Program (FAP), Child Development and Care (CDC), State Disability Assistance (SDA) or Social Security Insurance (SSI) recipients.

Subject: Flint water filter paragraph for website

Jenn,

I'd like to add information about the filters on the website, but I want to make sure that I understand the information.

Can you review the paragraph below and make changes as needed so that this information is accurate?

"To ensure safe drinking water, the state of Michigan is providing water filters for free.

1) Governor Snyder has identified $1 million in funding to secure filters for Flint residents.
2) The Michigan Department of Health and Human Services has identified funds to provide filters for free to Flint DHHS clients in 25,000 households.
3) United Way and community partners are working to secure additional filters and distribute them.

Please check mi.gov/FlintWater for regular updates regarding water filters for Flint residents."

Thanks for your help

Josh

Hi Josh:

2nd point -- can we say "The Michigan Department of Health and Human Services will provide filters for free to Flint DHHS clients in 25,000 households."?

We would like to stay away from "identified funds" until the amount is finalized.

One other thought -- should we put an asterisk after Flind DHHS Clients* and list which program participants are eligible as a footnote at the end? I'll leave it up to you, but those eligible are those who were former DHS clients -- not necessarily all MDHHS clients. We can clarify if asked but it might be better to avoid initial confusion -- we wouldn't want to mislead all HMP enrollees, for example.

Gov. Rick Snyder: Comprehensive action plan will help Flint residents address water concerns

Collaborative effort with state, federal and city leaders focuses on testing, assistance

FLINT, Mich. – Flint residents need to have access to safe, clean, water now and long into the future, Gov. Rick Snyder said, announcing a comprehensive action plan created with state, federal and city leaders to address concerns about drinking water.

The water leaving Flint's drinking water system is safe to drink, but some families with lead plumbing in their homes or service connections could experience higher levels of lead in the water that comes out of their faucets.

The action plan focuses on increasing water testing, offering additional precautions for families with lead plumbing in their homes, and providing long-term solutions to address the city's water infrastructure challenges. The plan was created at Snyder's direction by the Michigan Departments of Environmental Quality (DEQ) and Health and Human Services (DHHS), the U.S. Environmental Protection Agency, and the city of Flint.

"We are focused on helping ensure safe, clean, accessible drinking water and addressing and mitigating concerns and protecting public health," Snyder said. "Today's action plan builds upon ongoing work with local, state and federal agencies and our partnership with city and community leaders. Together, we are working to ensure that all Flint residents have accurate information and know that help is available to address potential problems."

The city and the state also are working together to gather more data to ensure the water that leaves the treatment plant as well as the water that arrives in Flint homes is safe for all residents. The plan includes:

- Testing in Flint public schools immediately to ensure that drinking water is safe, with testing also available at no cost to any other school in Flint.
- Offering free water testing to Flint residents to assure their drinking water is safe.
- Providing free water filters to residents.
- Expanding health exposure testing of individual homes.
- Accelerating corrosion controls in the Flint drinking water system.
- Accelerating water system improvements to address replacing lead service lines.
- Expediting the completion of the Karegnondi Water Authority pipeline.
- Expanding a Safe Drinking Water Technical Advisory Committee to ensure the best technology, practices and science are being followed by adding an expert from the Environmental Protection Agency's Office of Research and Development to the group.
- Naming Dr. Eden Wells, chief medical executive for the Michigan Department of Health and Human Services, as the Flint drinking water public health adviser.
- Boosting a comprehensive lead education program to make sure residents have detailed information about how to protect themselves and their homes.

Residents can have their water tested by calling 810-787-6537 and pressing 1, or emailing flintwater@cityofflint.com. The DEQ is covering the cost of this testing.

State leaders have been working closely with state and federal lawmakers to tap resources at all levels of government to address concerns.

State health experts said there has been an increase in elevated childhood blood lead levels in some specific communities. Initial analysis of MDHHS data found that blood lead levels of children in Flint have followed an expected seasonal trend. While this analysis for Flint as a whole remains true, a comprehensive and detailed review breaking down data by ZIP codes with the city revealed that MDHHS data is consistent with a study presented recently by Hurley Children's Hospital.

"While we cannot conclusively say that the water source change is the sole cause of the increase, this analysis supports our efforts as we take active steps to reduce all potential lead exposures in Flint," MDHHS Director Nick Lyon said. "As part of this, we are working closely with our public and private partners to provide Flint residents on MDHHS assistance programs with free water filters and inform families about the steps they can take to reduce all lead exposures in their home."

As a part of the action plan, National Sanitation Foundation certified water filters will be made available to Flint residents through emergency state funds and coordinated efforts with local

community agencies and donors. Information about how to obtain the filters will soon be available.

"This action plan offers concrete steps we will take in a local, state and federal partnership to ensure all Flint residents have safe water to drink," DEQ Director Dan Wyant said. "The DEQ will work closely with the city to gather further data to ensure the water that leaves Flint's system as well as the water that arrives in Flint homes is safe to drink."

Additional information is available at www.michigan.gov/flintwater.

Hi there Monica -

Governor not in Flint today but he's hosting an embargoed media conf right NOW. If you can join us, please do. I can walk you through afterward too if not.

Gov. Snyder and Cabinet leaders – MI Dept of Environmental Quality Director Dan Wyant of the, MI Dept of Health & Human Services Director Nick Lyon of the, and Dr. Eden Wells, the state's Chief Medical Executive – to outline a comprehensive action plan to further address Flint water concerns.

They will also be available to answer Qs.

This information is fully embargoed until when the 1:30 p.m. press conference later today in Flint begins.

SPECIFIC CALL-IN DETAILS:
Topic: Flint water action plan
Date: Friday, Oct. 2
Time: 11:15 a.m.
Conference Line call-in number: PPI
Conference line passcode: PPI
** To ask a question during that portion of the call, please press "0." (but please refrain from pressing zero until opening remarks are completed to help ensure you don't miss any of the details).

****NOTE**:** This invitation is for planning purposes only and meant for you and/or your outlet as there are a limited number of participant lines. Please let us know if you wish to have someone else participate so we can work to accommodate.

Please let me know if you need anything else at all in interim.

Hey team--

DEQ is finishing the Flint water website currently so that it can be live at 1 PM.

Here are screenshots currently of the page. They're still waiting for the final press release to include.

The initial description is from Karen at DEQ. The resources listed are my infographics and lead information from DHHS. There's also information from DHHS regarding the free water filters.

Please let me know what else we need to include and what changes are needed. The website will be www.mi.gov/FlintWater

Thanks

Josh

Flint River will remain as city water source in state plan to address lead

The city would continue to use the Flint River as its water source, according to a plan expected to unveiled today, Oct. 2, by state officials.

A person with knowledge of the plan said it includes the immediate testing of water in all Flint schools, faucet filters for city residents and expanded testing for lead among city residents.

The plan is being unveiled at a 1:30 p.m. news conference at Kettering University.

The person familiar with the plan said it does not include reconnecting to the Lake Huron water through the Detroit Water and Sewerage Department.

Parts of the plan include:

- Immediately test water at Flint schools at state expense, working with administrators.
- Expand lead exposure testing for individuals.
- Continue offering free water testing to Flint residents at no charge.
- Expedite optimization of corrosion control
- Expediting completion of the Karegnondi Water Authority
- Appointing a Flint Drinking Water Public Health Advisor
- Providing water filters to Flint residents
- Expanding a comprehensive lead education initiative

Today's news conference comes after an avalanche of disastrous news about Flint water and a drastic change in direction among city and state officials, who have defended the safety of city water for months.

Calls for the city to end its use of the Flint River for drinking water increased after a Hurley Medical Center doctor's study showed the number of children in the city with elevated blood levels nearly doubled after the city started using it as a water source in 2014.

State officials initially questioned the data, but Snyder this week acknowledged problems with lead.

The state oversees water quality in Flint, and state-appointed emergency managers were running city government when decisions were made not to negotiate a short-term agreement to continue buying Lake Huron water from Detroit and to instead use the river as a water source.

Although the city is not currently in violation of the Safe Drinking Water Act, bacteria, the level of total trihalomethanes and lead have been problems in the water system since then.

Stay with MLive for more developments on this story.

Subject: RE: Embargoed media conf. call - Flint water action plan

Sara or Dave,

Quick follow-up question: In reference to the plan to immediately test water coming out of the faucets of all schools in Flint Community Schools, will the water at Flint's public charter schools be tested as well? I don't have an exact count, but I'm guessing there are a half-dozen or more charter schools in Flint.

Subject: Embargoed media conf. call - Flint water action plan
Importance: High

Hi there Jim and Chad –

Per earlier conversations, below is information for a media conference call with Gov. Snyder and Cabinet leaders – MI Dept of Environmental Quality Director Dan Wyant of the, MI Dept of Health & Human Services Director Nick Lyon of the, and Dr. Eden Wells, the state's Chief Medical Executive – to outline a comprehensive action plan to further address Flint water concerns.

They will also be available to answer Qs.

As agreed by you and your team, this information is fully embargoed until when the 1:30 p.m. press conference later today in Flint begins.

SPECIFIC CALL-IN DETAILS:
Topic: Flint water action plan
Date: Friday, Oct. 2
Time: 11:15 a.m.
Conference Line call-in number: PPI

Conference line passcode: PPI
** To ask a question during that portion of the call, please press "0." (but please refrain from pressing zero until opening remarks are completed to help ensure you don't miss any of the details).

NOTE:** This invitation is for planning purposes only and meant for you and/or your outlet as there are a limited number of participant lines. Please let us know if you wish to have someone else participate so we can work to accommodate.

Please let us know if who from Detroit News plans to participate or if you need anything else at all in interim.

Thanks so much,
SW

Importance: High

I apologize for the length of this...but wanted you all to review it before I ship it to Nancy. Please advise of any suggested changes.

Flint EM dates for financial emergency declared in December 2011

Mike Brown, apptd 12-1-11 (when fin emer declared under PA 4 of 2011)
Ed Kurtz, apptd 8-8-12 (when PA4 was repealed in Aug 2012, Brown couldn't serve as EM, PA 72 back in effect)
Mike Brown, apptd 7-4-13 (Kurtz retired; PA436 in effect)
Darnell Earley, apptd 10-8-13 (Brown resigned)
Gerald Ambrose, apptd 1-13-15 (Earley appointed DPS EM)

Financial Emergency resolved, 4-29-15 (RTAB apptd)

Other dates

June 26, 2012 – Letter from EM Brown to DWSD seeking permission to blend river water with DWSD water (attached).

Sept. 20, 2012 – Letter from EM Kurtz to DWSD requesting written permission to implement blending (attached).

March 25, 2013 – The Flint City Council endorses joining KWA (see url below)
http://blog.mlive.com/newsnow_impact/print.html?entry=/2013/03/flint_city_council_approves_re.html

April 11, 2013 – Treasurer Dillion sends letter to EM Kurtz (attached) noting conditional approval of move to KWA (pursuant to PA436), pending a review of DWSD's last, best offer.

April 16, 2013 – EM Kurtz informs Treasury that the City will join KWA (attached).

April 17, 2013 – DWSD transmits letter to EM Kurtz terminating service to Flint, effective April 17, 2014 (attached).

April 17, 2014 – Water service from DWSD officially ends.

Hey team--

DEQ is finishing the Flint water website currently so that it can be live at 1 PM.

Here are screenshots currently of the page. They're still waiting for the final press release to include.

The initial description is from Karen at DEQ. The resources listed are my infographics and lead information from DHHS. There's also information from DHHS regarding the free water filters.

Please let me know what else we need to include and what changes are needed. The website will be www.mi.gov/FlintWater

Thanks

Josh

TAKING ACTION ON FLINT WATER

www.mi.gov/FlintWater

On Friday, October 2, 2015, Gov. Rick Snyder announced a comprehensive action plan created with state, federal and city leaders to address concerns about Flint drinking water so that residents have access to safe, clean, water now and long into the future. The water leaving Flint's drinking water system is safe to drink, but some families with lead plumbing in their homes or service connections could experience higher levels of lead in the water that comes out of their faucets.

The action plan focuses on increasing water testing, offering additional precautions for families with lead plumbing in their homes, and providing long-term solutions to address the city's water infrastructure challenges. The plan was created at Snyder's direction by the Michigan Departments of Environmental Quality (DEQ) and Health and Human Services (DHHS), the U.S. Environmental Protection Agency, and the city of Flint.

To get your water tested for free, please call the city of Flint Water Plant at (810) 787-6537 and then press 1. You can also email flintwater@...

Hi David,

I wanted to see if you could confirm reported details of the teleconference call this morning, in that Flint might reconnect with Detroit water?

Additionally, was this a call open to the media? It would've been nice to be on that call.

Best,

I know Nancy probably doesn't care, but this is outrageous to place the entirety of this blame on the Governor. And she willingly or unwillingly is totally ignoring everything that was said this morning about the Flint River not being the issue. Are others understanding this point? I feel like Chad did on the call.

Hi all,

Noticed a response was passed along to Michigan Radio, in which MDEQ says lime softening has been used as a corrosion control agent "all along." Is that accurate? If so, does "all along" mean ever since Flint switched to the Flint River?

Thanks.

FYI, this is the statement we released this afternoon …

This statement can be attributed to EPA Region 5 Administrator Susan Hedman:

> "Actions that the State of Michigan and the City of Flint announced today are important steps to protect public health. The immediate steps being taken to implement corrosion control will reduce lead in drinking water, as required by the Safe Drinking Water Act. US EPA will continue to provide technical assistance to the State of Michigan and the City of Flint to support their joint effort. "

www.mi.gov/FlintWater

On Friday, October 2, 2015, Gov. Rick Snyder announced a comprehensive action plan created with state, federal and city leaders to address concerns about Flint drinking water so that residents have access to safe, clean, water now and long into the future. The water leaving Flint's drinking water system is safe to drink, but some families with lead plumbing in their homes or service connections could experience higher levels of lead in the water that comes out of their faucets.

The action plan focuses on increasing water testing, offering additional precautions for families with lead plumbing in their homes, and providing long-term solutions to address the city's water infrastructure challenges. The plan was created at Snyder's direction by the Michigan Departments of Environmental Quality (DEQ) and Health and Human Services (DHHS), the U.S. Environmental Protection Agency, and the city of Flint.

To get your water tested for free, please call the city of Flint Water Plant at (810) 787-6537 and then press 1. You can also email flintwater@...

Hi Dave --

I know we just chatted, but to reiterate, the $1 million in funding was identified to serve Flint residents in addition to those we are able to provide filters with through MDHHS emergency funds. The MDHHS emergency funds must be used to support people who are active Family Independence Program (FIP), Food Assistance Program (FAP), Child Development and Care (CDC), State Disability Assistance (SDA) or Social Security Insurance (SSI) recipients.

In terms of distributing the $1 million in filters more broadly, that policy is actively being worked out --those details and logistics will be made publicly available as soon as they're finalized.

Thank you, and be in touch again soon.

Best,

Subject: national guard water tanker suggestion

Sara:
We are seeking comment for a story based on the request to the governor by Genesee County Clerk-Register and former state senator John Gleason to consider using National Guard water tankers in response to providing water to Flint residents.
I've attached a letter from Gleason to Gov. Snyder from September 2014 on this subject.
Mr. Gleason said last week that's he's spoken in recent days to state Sens. Horn and Ananich in an new effort to get Flint access to the National Guard water tankers.
Thanks in advance for your help.

Sierra Club Calls For Urgent Action on Snyder Water Plan, Probe of Michigan Department of Environmental Quality

FOR IMMEDIATE RELEASE

Friday, October 2, 2015

Media Contact: David Holtz, david@davidholtz.org/313-300-4454

LANSING—Sierra Club today called on Gov. Rick Snyder to act decisively and urgently to implement plans to end the public health crisis in Flint and to support an independent

investigation into the Michigan Department of Environmental Quality's oversight of federal drinking water laws.

"Given the clear risks to vulnerable populations and the state's public health responsibilities this is a time for strong leadership and accountability from state public health authorities and the governor," said **David Holtz**, **Sierra Club** Michigan Chair. "The governor, finally, is assuming direct responsibility for responding to a crisis that every day is damaging the health of Flint's children. His actions should be much stronger, however, and he needs to find out how we got to the point where Flint children are drinking lead and what the MDEQ's role was in those decisions and actions."

The Snyder administration today outlined a series of steps they will take to address Flint's public health crisis. They include accelerated and expanded water treatment, providing filters to some residents, expanded testing of residents and an examination of whether to temporarily switch back to the Detroit water system. Replacing Flint's lead pipes over time were also on the administration's to-do list.

Sierra Club Michigan Director **Gail Philbin** said only independent testing of Flint's water for lead will be credible because of questions raised regarding the city and MDEQ's handling of past test results.

"Parents need to know drinking water is safe for their children," said Philbin. "Immediately they need credible testing for lead and alternatives to contaminated water. The likely best way to ensure safe drinking water in Flint is to change to a safe and reliable drinking water source and that's Detroit's water system and to eliminate lead pipes."

Investigations by the ACLU and nationally recognized drinking water expert Marc Edwards at Virginia Tech University have pointed to failures in testing and enforcement of federal drinking water standards by the Michigan Department of Environmental Quality. An MDEQ spokesman reportedly attacked Virginia Tech's results and complained about the "near-hysteria" over Flint's water supply. The Virginia Tech researcher documented what he called "mistakes and deception" involving the MDEQ's handling of Flint's drinking water problem.

"Along with ensuring Flint residents aren't drinking lead, we need for the governor to ensure that the public gets answers to what happened and why we ended up with a public health crisis in Flint," said Holtz. "That will require an independent investigation. If that's something Governor Snyder is unwilling to do we need federal authorities to determine to what extent, if any, state officials who are responsible for implementing federal drinking water standards are accountable for the public health crisis in Flint."

The Greater Flint Health Coalition, a group of health professionals in the Flint community, has concluded that Flint's drinking water is unsafe because of elevated lead blood levels. The city of Flint began using the Flint River as a water source in April 2014 following a decision made by emergency manager Darnell Earley.

Centers for Disease Control and Prevention studies show that lead in drinking water can cause serious health problems and that the greatest risk of lead exposure is to infants, young children and pregnant women. Scientists have linked the effects of lead on the brain with lowered IQ in children.

September 10, 2014

Governor Snyder,

The recent water concern in the City of Flint has revealed two actions for future drinking water shortages.

In the past, the Flint area has used the National Guard water tanker for local road races. Also, daily water tankers fill our local swimming pools.

When we have large numbers of citizens that must use the "Boil the Water" process, why can't we use the tankers I mentioned above?

Flint has gone days without drinking water.

With such a basic life need, let's try some possible solutions! We could dispense the water at Senior Centers, community gathering locations, neighborhood schools and churches. This could be seen as a training experience for the National Guard or Reserves.

Governor, the need is there and the tankers are at hand.

Thanks for your time and please let me know what you think.

I hope this note finds you and your family in fine health.

Genesee County Clerk
John J. Gleason

Subject: water filter distribution

Sara:
I'm expecting to write a story about the efforts to distribute water filters that have so far come into Flint from several sources.
Are the state-funded filters being distributed through the Genesee County Health Department and United Way or through state offices such as the Department of Human Services, or both?
Have the state-funded filters begun to arrive in Flint and does your office want to comment on the efforts to distribute the filters so far?
You may have heard that the initial distribution was expanded Saturday to include all residents because there were far more filters than low income families that qualified who turned out to request one.
Thanks for your help.

Subject: Release on Flint
Attachments: Flint Filters Press Release 10515.pdf

Importance: High

Attached is the draft release we would like to issue ASAP regarding the new plan for water filter distribution in the city of Flint.

At a meeting with multiple community partners today, our local MDHHS office realized they could do distribution from the 2 Flint offices as long as the local community action agency could assist them in storing the larger quantities of filters.

Locally, the groups will be issuing a press release from the local health department discussing distribution, but we feel it is important to also send this from MDHHS.

We are happy to discuss this with Ron Fonger if you want him to be the first press call we make once we issue it.

Water filters available for MDHHS clients in Flint beginning Tuesday

LANSING, Mich. – Free water filters will be available to current Michigan Department of Health and Human Services clients and Flint residents at four locations beginning Tuesday, October 6, at 9 a.m. through a partnership between the MDHHS and the Genesee County Community Action Resource Department. Free National Sanitation Foundation certified water filters are being provided to Flint residents as part of the administration's comprehensive approach to addressing water concerns in the area.

Current MDHHS clients are encouraged to visit either the 125 E. Union St. or 4809 Clio Road MDHHS office location to obtain a free, certified home water filter. Residents who are not currently enrolled in MDHHS assistance programs should visit the Genesee County Community Action Resource Department offices located at 2727 Lippincott and 601 North Saginaw in Flint. Staff will be onsite at all four locations from 9 a.m. to 4 p.m., Monday through Friday, to distribute filters and assist residents who have questions about proper installation.

"Ensuring that families in the Flint area have access to resources that will help reduce the potential for lead exposure is our top priority," said Nick Lyon, director of the MDHHS. "I want to thank our partners who have mobilized to make water filters available – a point that highlights the importance of continued collaboration at the local, state and federal level as we move forward."

MDHHS clients in the city of Flint who are active Family Independence Program (FIP), Food Assistance Program (FAP), Child Development and Care (CDC), State Disability Assistance (SDA), or Social Security Insurance (SSI) recipients should bring valid identification and a copy of their water bill to their local MDHHS office to receive their filter free of charge. Flint residents who are not active MDHHS clients should bring identification and their water bill to the GCCARD location.

Although blood lead levels throughout the city of Flint have remained steady, last week, MDHHS data was found to be consistent with a recent Hurley Children's Hospital study indicating increased blood lead levels in children residing in two Flint ZIP codes after a 2014 change in water source. While lead paint remains the number one cause of lead poisoning in Michigan, the recent data prompted MDHHS to take action to reduce potential lead exposures through water sources.

MDHHS is urging parents in Flint and throughout the state to do their part in preventing elevated blood lead levels in children. For more information about steps you can take now, visit www.michigan.gov/lead, or contact your local health department. For updates on Flint water and available resources, visit www.michigang.gov/flintwater.

Importance: High

Talked at length with Geralyn about this just now. Think is a good thing, and shows immediate follow up from action steps announced Friday. Added bonus is that it should be pretty easy for Flint clients and residents and have a "no wrong door" approach too just in case. Please see attached and below.

This is slated for distribution at 4 p.m. Need to hear if any concerns from anyone ASAP.

Otherwise, it's a go.

Thanks much,
SW

Subject: RE: water filter distribution

State teams have been working throughout the weekend with the local community and partners to get this finalized and this action step mobilized as soon as possible from state's comprehensive plan announced Friday, Ron.

Looping in Angela and Jen from the MI Dept of Health and Human Services here who can walk you through the details, but essentially filters will be available starting tomorrow morning at both the two MDHHS offices in Flint as well as the two Genesee Co. Community Action Resource Dept offices in Flint.

Great example of the collaboration underway and that's so key to addressing this issue together.

I know you'll be hearing from the soon.

Thanks and best,
SW

Subject: water filter distribution

Sara:
I'm expecting to write a story about the efforts to distribute water filters that have so far come into Flint from several sources.
Are the state-funded filters being distributed through the Genesee County Health Department and United Way or through state offices such as the Department of Human Services, or both?
Have the state-funded filters begun to arrive in Flint and does your office want to comment on the efforts to distribute the filters so far?
You may have heard that the initial distribution was expanded Saturday to include all residents because there were far more filters than low income families that qualified who turned out to request one.
Thanks for your help.
Call is it's easier

Both – clients should go to DHHS office, all others should go to local Community Action Agency location – though either can go to other locations and walk out door with filter by same form/policy to ensure "no wrong door" and make as easy as possible. But they are trying to direct folks accordingly. Outlined in 2nd graph – not clear enough?

I'm confused after reading the release. Does this deal just with filters for the clients, or for everyone?

Subject: RE: Release on Flint

What if they are shut ins or can't get there? Where's the relief coming from? Is the Flint Transit Authority willing to extend complimentary transportation? Who is going to explain to the recipients how the filter fits on their faucet?

I know from experience that my wife never grew up building things out of Erector Sets, and she's terrible at reading "part a attaches to part b with two bolts enclosed in the third packet. Don't use the ones marked only for Delta faucets" oh, you get the point.

Just a suggestion from a syntax point of view, the construction of the first sentence appears to allow anyone who is a DHHS client and anyone who is a Flint resident to receive a water filter. It isn't clear that it applies to a person who is a Flint resident who receives public assistance and not to other Flint residents. Secondly, don't forget that other Flint residents also should be entitled to a water filter and although the press release is about DHHS clients, we don't want to create additional confusion. A throw-away line about the other residents might be wise.

Thanks, Chief.

That is correct – anyone who is a DHHS client **AND** anyone who is a Flint resident will receive a water filter.

They are trying to direct clients to go to DHHS office, all other residents to the local Community Action Agency locations – though either can go to the other respective locations and walk out the door with a filter by using the same form/policy to ensure "no wrong door" and make as easy as possible. But they are trying to direct folks accordingly. Outlined in lede and 2nd graph – will have them change headline to help with clarity further.

DHHS is still working on some of those first issues/Qs (shut ins, disabilities, etc) - working locally to get those components further refined. Active group including Area Agency on Aging, Co. Emergency Services, etc working on. Original plans for seniors was to see if Meals on Wheels volunteers could deliver and install but apparently interferes and would cause too much of a delay with delivery of hot food.

For Immediate Release

Kroger Donates 19 Palettes of Bottled Water to Mayor Dayne Walling who Plans to Donate it to Flint Community Schools, Al Serra Auto Plaza to Hold Water Donation Drive to Help Flint Senior Centers

Flint, Michigan – October 6, 2015 – Mayor Dayne Walling has received a donation from Kroger grocers of 19 palettes of water to help those in the community struggling with water. The Mayor has in turn donated that water to the Flint Community Schools for distribution to students. In addition to the Kroger donation, Al Serra Auto Plaza of Grand Blanc has announced plans to hold a month long bottled water donation drive to collect water for distribution to Flint's two Senior Centers as well as the Flint Community Schools. Details on that donation drive will be available at Al Serra's Facebook page today.

"Our children are a top priority given the effects lead can have on their development," said Mayor Walling. "Any bottled water donations we receive will be used for our children and other high risk groups, such as our seniors. We continue to recommend that residents follow the instructions of the Genesee County Health Department concerning lead in drinking water."

The City has been working with local aid agencies to provide water relief to Flint residents. Last week the City worked with the United Way of Genesee County to provide residents with water tap filters and gave away over

3,000 of them on Saturday, October 3, 2015 at the UM-Flint Recreation Center. On Friday it also was announced by the State of Michigan that $1 Million has been allocated to providing residents with water filters.

Don't forward or spread this around, but give me your take.
I think we may need to get G into Flint this week.
Unpublicized, but public. Filter distribution, testing visit, discussion with Superintendent, etc...
(And probably again next week.)

We should at least present the option of what a potential visit would look like.

Can you think about it and let me know how we'd do it.
I know it would require blowing up a day or part of a day.

Hey Greg,
I just had a meeting with the governor's office and my counterparts in the other departments and we were talking about the Flint water situation.
Have we had any feedback or concern raised from any of our parole/probations offices there?

Subject: Flint update

Here's a quick media update to add to the other Flint briefing and update coming from Dan Wyant.

CBS Evening News was in Flint Monday and Tuesday with coverage slated to air during tonight's 6 p.m news block nationally. Story isn't likely to be great, but should hopefully be fair and balanced. Will have ties into race, poverty, emergency management, and what state and locals did and knew when and how situation was handled.

We helped arrange interviews with DEQ Director Dan Wyant and DHHS' Cheryl Thompson, who is the deputy director for the Department's field services, an African American and also a Flint resident. They did those interviews from the now up and running water filter distribution centers at one of the two DHHS Flint offices.

They also did interviews with local Flint media.

Majority of media coverage both in Flint locally and statewide today to date has been on free water filter distribution so has been generally more positive.

Sen. Ananich was again urging immediate switch to Detroit water with comment "To me, the cost-benefit analysis that has cost on one side and brain damage for kids on the other -- it's incomprehensible."

Erin Brockovich did an exclusive interview for WJRT TV 12 that's supposed to air tonight in the 5 p.m. news and the teaser is "one of the worst situations she's ever seen."

Subject: Fwd: Flint Drinking Water Action Plan Update - FOIA EXEMPT AND ATTORNEY-CLIENT PRIVILEGED

This may be helpful in crafting materials.

Begin forwarded message:

From: "Wyant, Dan (DEQ)" <WyantD@michigan.gov>
Date: October 6, 2015 at 5:05:10 PM EDT
To: "Scott, Allison (GOV)" <scotta12@michigan.gov>, "Muchmore, Dennis (GOV)" <muchmored@michigan.gov>, "Agen, Jarrod (GOV)" <AgenJ@michigan.gov>, "Dickinson, Sarah (GOV)" <DickinsonS@michigan.gov>
Subject: Flint Drinking Water Action Plan Update - FOIA EXEMPT AND ATTORNEY-CLIENT PRIVILEGED

The Flint Drinking Water Action Plan was announced on October 2, 2015. It included the following:

- Testing in Flint public schools immediately
- Offered free water testing to Flint residents
- Provided free water filters to residents with concerns or who are included in state assistance programs
- Expanding health exposure testing of individual homes
- Accelerating corrosion controls in the Flint drinking water system
- Accelerating water system improvements to address replacing lead service lines
- Expediting the completion of the Karegnondi Water Authority pipeline
- Expanding a Safe Drinking Water Technical Advisory Committee
- Named Dr. Eden Wells as the Flint drinking water public health advisor
- Boosted a comprehensive lead education program

Testing in Flint Public Schools Immediately

Samples were taken on October 2 and were received at DEQ laboratory over the weekend. Test results to date indicate 37 samples tested, 4 of which exceeded a federal action level, and 1 of those 4 was a significant outlier. We will be compiling detailed information about which schools and area codes the test results came from and will be providing that information in our next update.

We have met with DHHS, and we are working on developing response protocols, a communications plan, and guidance for schools when this data is reported.

Offered Free Water Testing to Flint Residents

We have received 4 sets of samples from Flint that represent individual residents. We will be compiling the total number and the results of those samples and reporting in a future report.

Provided Free Water Filters to Residents with Concerns or Who are Included in State Assistance Programs

DHHS held organizational meetings in Flint on October 5, and filter distribution by DHHS started on October 6. Nick Lyon in DHHS is taking the lead in filter distribution.

Expanding Health Exposure Testing of Individual Homes

Dr. Wells and Dan Wyant have been in conversations about a protocol for exposure testing. Dr. Wells will take the lead on developing the protocol.

Accelerating Corrosion Controls in the Flint Drinking Water System

A conference call was held with U.S. EPA Regional Administrator Susan Hedman and national corrosion control experts. We asked two questions:

1. **Which is a safer water source – DWSD or Flint River?**
2. **If you don't have an opinion on the safer source, what criteria should we use for an evaluation?**

EPA staff would not commit to a preference, but their evaluation of the criteria clearly lead to the conclusion that DWSD was a safer water source. EPA committed to submitting technical assistance to the Safe Drinking Water Technical Advisory Committee (Advisory Committee) meeting, which will be held on October 7 at 2:00 p.m. in Flint City Hall.

DEQ met with the Flint Mayor, the city manager, and their water staff. Flint agreed to expediting corrosion controls. We discussed the agenda for the Advisory Committee meeting. The Advisory Committee will be asked to evaluate two respective water sources at their Wednesday meeting.

We expect the Advisory Committee to recommend the water source that would address not only lead safety but also other water safety issues.

Accelerating Water System Improvements to Address Replacing Lead Service Lines

Conversations with Congressman Kildee and EPA have clarified the state would be allowed to use Drinking Water Revolving Loan funds to replace private drinking water service lines. Senator Ananich has been approached to introduce language clarifying the state's authority.

Expediting the Completion of the Karegnondi Water Authority Pipeline

Dan Wyant has talked to Genesee County Drain Commissioner Jeff Wright. Mr. Wright has provided a list of issues that would help expedite the completion of the Karegnondi

Water Authority pipeline. They include truck weight and frost law exemptions, talent identification, and expediting permits.

Expanding a Safe Drinking Water Technical Advisory Committee

EPA has appointed their national technical expert to the Advisory Committee, and we have appointed Alfred Franzblau, M.D., Professor of Environmental Health Services, University of Michigan, to the Advisory Committee.

Named Dr. Eden Wells as the Flint Drinking Water Public Health Advisor

Boosted a Comprehensive Lead Education Program

Other Updates

- Dan Wyant was interviewed on October 6 by CBS Evening News during filter distribution in Flint. Questions asked were:
    - Was it a mistake to go to Flint River water?
      Answer: We draw water from the surface waters; we treat it to safe drinking water standards. At issue is lead exposure. Lead exposure must be addressed. Actions are being taken to address the issue.
    - Did you put kids at risk?
      Answer: Lead exposure is a serious issue, and steps need to be taken to limit lead exposure.
    - Why did it take so long?
      Answer: DEQ has been there from the beginning addressing the issue of Flint water. Recent tests justify and require the actions taken. Action steps address short-term, intermediate, and long-term lead issues to ensure public safety and confidence of the drinking water.

- Dan Wyant also spoke to the Governor about Flint funding needs. A meeting is scheduled for October 7 at 8:00 a.m. to further discuss proposals.

- What we are telling Flint citizens is:
    - Have your water tested
    - Use only cold water for drinking, cooking, and preparing formula
    - Run water before use if it has not been used for several hours
    - Obtain a water filter approved for lead removal
    - Purchase lead-free plumbing components
    - Remove entire lead service lines

Hey Dave, thanks for this - unfortunately didn't see it until morning. I'll be sure to use it in future stories.

Here's the story from today: http://www.washingtonexaminer.com/epa-wont-help-flint-during-water-crisis/article/2573554

-Kyle

On Tue, Oct 6, 2015 at 11:25 PM, Murray, David (GOV) <MurrayD1@michigan.gov> wrote:

Kyle,

Here's some additional information. I do expect some additional developments this week.

Gov. Snyder believes all state residents to have access to clean, safe water. The governor and the state agencies have played a highly visible role in working with Flint city leaders with their infrastructure challenges -- and will continue to do so. We understand why people are frustrated, and also want to make sure people have accurate information and know where they can go if they have questions about their health and the water connections in their home. The health and safety of Flint residents is always the first priority, and that includes ensuring there is clean, safe drinking water -- especially for children.

Last week the state unveiled a comprehensive action plan that builds upon existing state efforts to work with Flint leaders on their infrastructure needs. That included spending $1 million on faucet fileters for every city resident, an effort that also includes assistance from non-profit and corporate donors. The state also has provided $4.2 million in grants and restructured financing to help the city locate and fix some of the problems with its water infrastructure and add the carbon filtration system. Several state agencies continue to work with Flint leaders on their water challenges including through Mayor Walling's technical advisory board. That board includes outside experts and members will study data and offer recommendations.

The Department of Environmental Quality and the Department of Health and Human Services also are testing water and working with Flint residents on issues related to what they can do if they have concerns about the pipes in their homes. The DEQ last week started testing every public school in the city and offers testing to private and parochial schools as well.

It's important to remember that the emergency manager had the final say on making the change, but did so at the strong urging of Flint city leaders.

Decisions about changes to the water system were not forced upon the city. Emergency managers often try to work closely with mayors and city councils, getting recommendations from the local communities they are serving. The decision to make the switch to the Karegnondi pipeline came after an 8-1 vote by the City Council and strong endorsement by the mayor and Genesee County leaders. The move also came after a series of upgrades to Flint's water treatment plant.

FYI team –

There were some rumors going around today (with an apparent FB recording of a Brita rep) and being reported by media that the filters may not be properly certified to handle lead. DHHS' toxicology lab has again confirmed that the filters being provided ARE NSF certified for lead reduction.

They are working on a statement to share for our review and then to share immediately afterward before this gets any further out of control.

Dave – please note in particular since you're with the Governor. Hopefully will be well cleared up by that time, but just in case.

State offering extended, weekend hours for water filter distribution at Lippincott GCCARD

Nearly 5,000 NSF certified filters issued by MDHHS to Flint residents since Monday

LANSING, Mich. – Flint residents and Michigan Department of Health and Human Services clients with a city of Flint water bill will now be able to take advantage of extended hours this Thursday, Friday, and Saturday at the Genesee County Community Action Resource Department 2727 Lippincott location. Extended hours will be offered at the Lippincott facility only, and will run until 7 p.m. on Thursday and Friday, and from 10 a.m. to 2 p.m. on Saturday. The other three locations will maintain 9 a.m. to 4 p.m. operating hours, Monday through Friday, for filter pick up.

Dr. Eden Wells, MDHHS chief medical executive, reemphasized that the Brita SAFF-100 filters being distributed by the department and GCCARD do meet the NSF/ANSI 53 standards for drinking water treatment units.

"The Brita faucet filtration system that we are distributing to residents are National Sanitation Foundation certified to reduce lead in drinking water," said Dr. Eden Wells. "When connected appropriately, these filters improve water quality by filtering out contaminates including lead, chlorine, benzene and other chemicals."

Since Monday when MDHHS announced that free water filters would be distributed at four Flint locations, the state and GCCARD have partnered to issue approximately 5,000 free NSF certified water filters to residents that are on the city of Flint water system. The distribution of filters is part of the administration's comprehensive approach to addressing water concerns in the area. These NSF certified water filters remove lead in the water administered through water taps in homes.

MDHHS clients and residents with a city of Flint water bill may take advantage of the extended hours at the Lippincott GCCARD. During the regular business hours, MDHHS clients are encouraged to visit either the 125 E. Union St. or 4809 Clio Road MDHHS office location; residents on Flint water who are not currently enrolled in MDHHS assistance programs should visit the GCCARD offices at 2727 Lippincott and 601 North Saginaw. Staff will be onsite at all four locations to distribute filters and assist residents who have questions about proper installation.

MDHHS clients in the city of Flint who are active recipients should bring valid identification and a copy of their water bill to their local MDHHS office. Flint residents who are not active MDHHS clients should bring identification and their city of Flint water bill to a GCCARD location.

MDHHS is urging all residents do their part to prevent elevated blood lead levels in children. For more information prevention, visit www.michigan.gov/lead, or contact your local health department. For updates on Flint water and resources, visit www.michigan.gov/flintwater.

NSF International Statement regarding Flint Water System Lead Issue and certification NSF International/ANSI Standard 53

NSF International, the public health and safety organization that tests and certifies residential drinking water filtration systems, has confirmed that the three water filters being distributed by officials in Flint, Michigan are currently certified by NSF International for lead reduction.

Specifically, Brita Faucet Filtration System, model number SAFF-100 (in white, black or chrome), the PUR Faucet Mount, model number FM-3700B, and the Zero Technologies Water Treatment Pour Through Pitcher, model number ZD-018, are certified for lead reduction in accordance with NSF/ANSI 53 – Drinking Water Treatment Unit Standard for Health Effects.

Individuals wishing to verify that a specific filter is NSF certified can do so via the NSF website. Here are the links to verify each certification: Brita Faucet Filter System SAFF-100, PUR Faucet Water Filter System and the Zero Water Technologies Water Pitcher Filtration System

Consumers can contact NSF International at info@nsf.org or 1-800-673-8010 for any additional questions.

Media requests regarding NSF International please contact Liz Nowland-Margolis at lnowlandmargolis@nsf.org or 734-418-6624.

Additionally NSF International has other resources for the consumer regarding drinking water safety:

Sara:

I'm doing a piece for tomorrow's paper about the Flint lead situation.

A few questions for you:
1) I listened to the governor's briefing last week and I believe he said this: "We all have a concern about Flint's drinking water in terms of what we're seeing on lead."
Others have quoted it differently, this way: "We all have a concern about Flint's drinking water in terms IN what we're seeing on lead."
Can you help me know which is accurate?

2) Any new developments from the state in terms of a return to Detroit or some other plan?

3)
Do these sentences seem factually accurate to you:
State officials last week called for the testing of drinking water at all Flint public schools and expedited efforts to replace lead service lines, and promised $1 million to provide filters for residents.

Also separately: And blood tests released by a local pediatrician – and corroborated last week by state officials analyzing their own testing – showed an increase in elevated levels of lead in children in some Flint neighborhoods since 2014 when the city began drawing water from the river.

4) The city said the decision to go to Flint River water was made under the state appointed emergency manager. Does the governor want to comment on the EM's role in this? And does he want to comment on the possibility of state funds for a return to Detroit water?

Thanks
Monica

Not sure what you're referring to Harvey, but … all the filters the state is distributing are NSF certified, which is what is needed to address lead.

Here's the media release from DHHS as well as statement from NSF confirming as well.

STATE OF MICHIGAN
DEPARTMENT OF HEALTH AND HUMAN SERVICES
LANSING

RICK SNYDER
GOVERNOR

NICK LYON
DIRECTOR

FOR IMMEDIATE RELEASE
October 7, 2015

CONTACT: Jennifer Eisner
(517) 241-2112

State offering extended, weekend hours for water filter distribution at Lippincott GCCARD

Nearly 5,000 NSF certified filters issued by MDHHS to Flint residents since Monday

LANSING, Mich. – Flint residents and Michigan Department of Health and Human Services clients with a city of Flint water bill will now be able to take advantage of extended hours this Thursday, Friday, and Saturday at the Genesee County Community Action Resource Department 2727 Lippincott location. Extended hours will be offered at the Lippincott facility only, and will run until 7 p.m. on Thursday and Friday, and from 10 a.m. to 2 p.m. on Saturday. The other three locations will maintain 9 a.m. to 4 p.m. operating hours, Monday through Friday, for filter pick up.

Dr. Eden Wells, MDHHS chief medical executive, reemphasized that the Brita SAFF-100 filters being distributed by the department and GCCARD do meet the NSF/ANSI 53 standards for drinking water treatment units.

"The Brita faucet filtration system that we are distributing to residents are National Sanitation Foundation certified to reduce lead in drinking water," said Dr. Eden Wells. "When connected appropriately, these filters improve water quality by filtering out contaminates including lead, chlorine, benzene and other chemicals."

Since Monday when MDHHS announced that free water filters would be distributed at four Flint locations, the state and GCCARD have partnered to issue approximately 5,000 free NSF certified water filters to residents that are on the city of Flint water system. The distribution of filters is part of the administration's comprehensive approach to addressing water concerns in the area. These NSF certified water filters remove lead in the water administered through water taps in homes.

MDHHS clients and residents with a city of Flint water bill may take advantage of the extended hours at the Lippincott GCCARD. During the regular business hours, MDHHS clients are encouraged to visit either the 125 E. Union St. or 4809 Clio Road MDHHS office location; residents on Flint water who are not currently enrolled in MDHHS assistance programs should visit the GCCARD offices at 2727 Lippincott and 601 North Saginaw. Staff will be onsite at all four locations to distribute filters and assist residents who have questions about proper installation.

MDHHS clients in the city of Flint who are active recipients should bring valid identification and a copy of their water bill to their local MDHHS office. Flint residents who are not active MDHHS clients should bring identification and their city of Flint water bill to a GCCARD location.

MDHHS is urging all residents do their part to prevent elevated blood lead levels in children. For more information prevention, visit www.michigan.gov/lead, or contact your local health department. For updates on Flint water and resources, visit www.michigan.gov/flintwater.

Subject: Flint Water FY 2016 Supplemental Budget Request

This went to SBO moments ago

DRAFT Flint Water FY 2016 Supplemental Budget Request

1. $1 Million for Filters

The $1 million for filters will be used to purchase filters for households in Flint that do not qualify for assistance under any of the DHHS assistance programs. Filters for those residents will be paid for out of funding already in place in DHHS' budget. Each filter cost $20 and were ordered in bulk through Home Depot. Filters are being distributed through local public health, with documentation filed for each filter handed out.

2. $6 Million for switch from Flint River to DWSD

It will cost the City of Flint an additional $1.3 million per month to use DWSD instead of the Flint River. The State and the City agreed to split the cost until June 2016, when the new Karegnondi Water Authority will be completed and Flint will switch to that water source. ($1.3 million for 9 months)

3. $1.5 Million for 12 additional staff to do community Lead Exposure Testing

DEQ, DHHS and LARA are assembling a team to go into schools and high risk homes to test for lead exposure. The request is for 8 staff for DHHS, 2 staff for DEQ and 2 staff for LARA.

4. $1 Million for evaluating sample results at the State Lab

The new testing protocols for schools will require each faucet in the school to be tested and evaluated at the State lab. In addition, lead exposure testing in homes will result in tens of thousands more samples that will be need to processed. Each sample costs $26 to process.

Total Ask: $9.5 Million

Thanks Sara. I was referencing the specs that Susan gave over the phone on 9/28 during the meeting at DEQ. Water under the bridge given NSF's confirmation.

Best,
Harvey Hollins III, Director
Governor's Office of Urban Initiatives

There were some rumors going around today (with an apparent FB recording of a Brita rep) and being reported by media that the filters may not be properly certified to handle lead. DHHS' toxicology lab has again confirmed that the filters being provided ARE NSF certified for lead reduction.

They are working on a statement to share for our review and then to share immediately afterward before this gets any further out of control.

Dave – please note in particular since you're with the Governor. Hopefully will be well cleared up by that time, but just in case.

STATE OF MICHIGAN
EXECUTIVE OFFICE
LANSING

RICK SNYDER
GOVERNOR

BRIAN CALLEY
LT. GOVERNOR

CONTACTS:	FOR IMMEDIATE RELEASE
Sara Wurfel or Dave Murray Governor's Office: 517-335-6397 Brad Wurfel, 517-284-6713 Department of Environmental Quality Jennifer Eisner, 517-230-9804 Department of Health and Human Services	Thursday, Oct. 8, 2015

Gov. Rick Snyder: Move back to Detroit water provides best protection for public health in Flint

State, Mott Foundation and city form partnership to fund switch

FLINT, Mich. – To protect Flint families and children, Gov. Rick Snyder today announced Flint will switch back to purchasing its drinking water from the Great Lakes Water Authority.

The city requested the state's help to fund the $12 million switch after a meeting of Flint's Technical Advisory Committee on Wednesday afternoon. The state agreed to match the City's costs for the reconnection effort. Flint will provide $2 million, and the Mott Foundation will donate $4 million toward the City's portion.

Flint's move to the Great Lakes Water Authority is expected to cost about $1.3 million per month until the Karegnondi Water Authority is completed next summer.

State agencies today also committed an additional $3.5 million for water filters, free lead testing through the state laboratory for Flint water customers, and hiring additional staff to conduct health exposure monitoring for lead.

"All Flint residents need clean, safe drinking water," Snyder said. "The technical experts helping the city on its water advisory all agreed this move back to the Great Lakes Water Authority provides the best public health protection for children and families. I appreciate Detroit's willingness to bring Flint back online, the Mott Foundation's generous donation, and the dedication of all parties to work together to protect Flint families and kids."

The move to Detroit water, which is drawn from Lake Huron, carries many public health benefits. As large bodies of water, the Great Lakes are naturally prone to fewer problems from large rain events and other runoff issues than are shallower rivers. Additionally, Detroit has already fully optimized its corrosion control, using phosphates to help coat the insides of pipes and prevent lead from leaching into the water.

However, the move to Detroit water will not completely resolve the city's problem with lead service lines or aging infrastructure. It will take time for pipes in Flint to become coated with the phosphate corrosion control. Additionally, until all lead pipes and plumbing are replaced, some households in the city could experience lead in their drinking water.

To best protect public health, Snyder and MDHHS advise residents to continue using water filters. Free filters are available for current MDHHS clients at the 125 E. Union St. or 4809 Clio Road MDHHS office locations. For residents who are not currently enrolled in MDHHS assistance programs, free filters are available at the Genesee County Community Action Resource Department offices at 2727 Lippincott and 601 North Saginaw in Flint. Staff will be onsite at all four locations from 9 a.m. to 4 p.m., Monday through Friday, to distribute filters and assist residents who have questions about proper installation.

At the Lippincott location only, extended hours will be offered this weekend, including until 7 p.m. on Thursday and Friday and from 10 a.m. to 2 p.m. on Saturday.

Other good practices for residents concerned about lead include turning on the cold water tap and running the water until it's as cold as it will go. Additionally, only use cold water for cooking, drinking and especially mixing baby formula.

School test results released; more investigation planned

The state today also released the first results from its free lead screening program in schools and homes. Of 37 total samples taken at 13 buildings, four samples spread over three buildings exceeded the federal action level of 15 parts per billion.

However, this sampling provides only an initial screen, and the state is committing to further testing water and inspecting plumbing at these schools. Until testing is complete, schools are advised to continue using bottled water and filtration as a precaution to protect children.

In addition, free testing is still available for any other Flint school, including daycares and Head Starts. Free testing is also available for any Flint resident.

Additional information, including more detailed lead screening results, is available at www.michigan.gov/flintwater.

Terry,

I know Flint is under the RTAB now, but would you be able to help connect me with someone that might be able to tell me just how much it would cost to connect the city back to the DWSD water supply? Let me know if you could help out today. Thanks!

Editor's note: Media must present valid press credentials on site.

Thursday, Oct. 8 at 10 a.m.
Gov. Rick Snyder will make an announcement regarding the Flint water system. He will be joined by Flint Mayor Dayne Walling, Director of Environmental Quality, Dan Wyant, Director of the Department of Health and Human Services, Nick Lyon, Dr. Eden Wells, Chief Medical Executive at DHHS, and Ridgway White of the Charles Stewart Mott Foundation.

A livestream option is also available at www.michigan.gov/snyderlive. If you wish to embed the event please visit http://new.livestream.com/snyderlive for more information.

Location:
Commerce Center/Mott Foundation Building - Conference Center, Ground Floor
519 S. Saginaw St.
Flint, MI

Thursday, Oct. 8 at 7 p.m.
Snyder will offer remarks at the Celebration of Life Gala supporting Magen David Adom (Israel's national 911 and emergency services).

Location:
Adat Shalom Synagogue
29901 Middlebelt Rd.
Farmington Hills, MI

Subject: RE: MA for review

Sigh of relief and good news on stream.

Also, Mott comms apparently said their building team recommended the name that appears on the outside of the building to help avoid confusion, which has a slightly revised address too.

Commerce Center/Mott Foundation Building - Conference Center, Ground Floor
519 S. Saginaw Street

We should add note about credentialed media as well.

Subject: Roberto Acosta, Flint Journal

Hi Dave,

This is Roberto Acosta with The Flint Journal.

I was trying to reach the governor's office for a comment on the recommendation made by a blue ribbon panel of water experts Wednesday, Oct. 7, for the city of Flint to reconnect to Detroit water as soon as possible.

The recommendation was made during a meeting at Flint City Hall by the Technical Advisory Committee that was formed earlier this year by Flint Mayor Dayne Walling and includes an expert from the U.S. Environmental Protection Agency.

If there is any comment that could be provided this afternoon by the governor's office, it would be greatly appreciated.

Thank you for your time and consideration of this request,

Roberto Acosta

Subject: Updated MDHHS Talking Points
Attachments: Flint Water Talking Points 100715.docx

Attached talking points updated to include info re: extended hours for water filter distribution, school testing results, NSF filter certification.

Thank you,

Jennifer (Smith) Eisner
Public Information Officer
Michigan Department of Health and Human Services
517-241-2112

Blood Lead Levels in Flint Talking Points
October 7, 2015

Water Filters

- Our first action item is to work closely with our public and private partners to provide water filters to Flint residents and MDHHS clients.
- To meet this priority, the governor identified one million dollars in state funding to purchase water filters for Flint residents.
- The Brita SAFF-100 filters being distributed by the department and GCCARD do meet the NSF/ANSI 53 standards for drinking water treatment units.
- The Brita faucet filtration system we are distributing are National Sanitation Foundation certified to reduce lead in drinking water.
- Free water filters are available to current Michigan Department of Health and Human Services clients and Flint residents who are on the Flint water system at four locations:
    - Flint residents who are not current MDHHS clients should visit one of two Genesee County Community Action Resource Department offices to obtain a filter.
        - at 2727 Lippincott and 601 North Saginaw in Flint
    - Current MDHHS clients in the city of Flint should visit their local MDHHS office
        - At 125 E. Union St. or 4809 Clio Road
- Staff will be onsite at all four locations from 9 a.m. to 4 p.m., Monday through Friday, to distribute filters and assist residents who have questions about proper installation.
- Extended hours are being offered at the Lippincott facility only, and will run until 7 p.m. on Thursday and Friday, and from 10 a.m. to 2 p.m. on Saturday. The other three locations will maintain 9 a.m. to 4 p.m. operating hours, Monday through Friday, for filter pick up.
- Given the questions and concerns regarding the change in water source in Flint, MDHHS authorized the use of emergency services funding to provide water filters for MDHHS clients receiving assistance in the city of Flint.
- This funding will support active Family Independence Program (FIP), Food Assistance Program (FAP), Child Development and Care (CDC), State Disability Assistance (SDA), State Disability Assistance (SDA), or Social Security Insurance (SSI) recipients so that they can obtain filters that are National Sanitation Foundation (NSF) certified to remove lead and ANSI Standard 53.
- MDHHS currently serves approximately 25,000 households in Flint.

School Testing and Results

- The state today also released the first results from its free lead screening program in schools.
- Out of 13 buildings tested, four samples spread over three buildings exceeded the federal action level of 15 parts per billion.
- However, this sampling provides only an initial screen, and MDHHS toxicologists will work with DEQ to conduct further testing.
- Schools on the Flint water system should continue using filtered or bottled water to protect against potential lead exposure.

Background Information

- Initial analysis of MDHHS data found that blood lead levels (BLLs) of children in Flint have followed an expected seasonal trend; due to small numbers further analysis was initiated.
- While this analysis of blood lead levels in Flint as a whole remains true, after a comprehensive and detailed review down to the zip code level, we have found that the state analysis is consistent with that presented by Hurley.
- Director Lyon is working closely with DEQ and the administration to take active steps to reduce all potential lead exposures in Flint, and across the state.
- Our Chief Medical Executive has been in communication with the lead investigator at Hurley Children's Hospital, and we continue to work with Hurley, the city of Flint, local and state leaders to verify and analyze data trends.
- Zip code-level data does show that there has been an increase in elevated childhood blood lead levels in specific communities.
    - This does not conclusively mean that the water source change is the sole cause of the increase, but data does show an association.
    - There is an increased proportion of children with elevated Blood Levels (ELBs) in several zip codes, particularly 03 and 04. These appear to have increased over the last 1.5 years.
    - Lead exposure can occur from a number of different sources (such as paint, gasoline, solder, and consumer products) and through different pathways (such as air, food, water, dust, and soil).
    - Although there are several exposure sources, lead-based paint is still the most widespread and dangerous high-dose source of lead exposure for young children in the US and Michigan.
- We reviewed MDHHS statewide data using the same methodology used by Hurley, looking at our numbers by zip code and age ranges, and filtering out non-Flint children.
- Routine surveillance of blood lead levels does not analyze data down to the zip code level. Detailed analysis like this occurs when there is reason to focus in on precise locations or populations.

- MDHHS is working closely with the Michigan Department of Environmental Quality, Hurley Children's Hospital, the Genesee County Health Department, and community organizations to initiate further action steps.
- We understand that cost may be a barrier to following the recommendations for drinking water, which is why NSF certified filters are being distributed to residents on the Flint water system free of charge.
- MDHHS is recommending that residents follow the Public Health Advisory issued by the Genesee County Health Department, as well as take further steps to reduce exposures to all forms of lead in and around their homes.

MDHHS Stats and Facts

- 'High Risk' Zip codes (48503 and 48504)
    - Blood lead level rates among children under six years of age in the high risk zip codes (48503, 48504) were 2.7 times higher than the rest of Genesee County before the switch to Flint River Water.
    - After the switch to Flint River Water, rates in the high risk Zip codes were 3.2 times that of the rest of Genesee County.
- Other Zip codes in Flint
    - Rates of elevated blood lead levels among children under six years of age in other parts of the city of Flint were 2 times that of the rest of Genesee County before the switch to Flint River Water.
    - The magnitude of the elevated rate remained roughly the same during the period after the water source switch.
- Lead abatement through MDHHS was federally funded up until FY14 when Michigan began providing additional funds to abate homes.
- In FY14, $1.25M General Fund was added. In FY15, General Fund was bumped up to $1.75M and FY16, General Fund remains at $1.75M.

Reducing and Removing Lead Exposure

- In housing built before 1978, it can be assumed that the paint has lead unless tests show otherwise.
- Make sure your child does not have access to peeling paint or chewable surfaces painted with lead-based paint.
- Children and pregnant women should not be present in housing built before 1978 that is undergoing renovation. They should not participate in activities that disturb old paint or in cleaning up paint debris after work is completed.
- Create barriers between living/play areas and lead sources. Until environmental clean-up is completed, you should clean and isolate all sources of lead.
    - Close and lock doors to keep children away from chipping or peeling paint on walls. You can also apply temporary barriers such as contact paper or duct tape, to cover holes in walls or to block children's access to other sources of lead.

- Regularly wash children's hands and toys. Hands and toys can become contaminated from household dust or exterior soil. Both are known lead sources.
- Regularly wet-mop floors and wet-wipe window components. Because household dust is a major source of lead, you should wet-mop floors and wet-wipe horizontal surfaces every 2-3 weeks.
    - Windowsills and wells can contain high levels of leaded dust. They should be kept clean. If feasible, windows should be shut to prevent abrasion of painted surfaces or opened from the top sash.
- Take off shoes when entering the house to prevent bringing lead-contaminated soil in from outside.
- Prevent children from playing in bare soil; if possible, provide them with sandboxes. Plant grass on areas of bare soil or cover the soil with grass seed, mulch, or wood chips, if possible.
    - Until the bare soil is covered, move play areas away from bare soil and away from the sides of the house. If you have a sandbox, cover the box when not in use to prevent cats from using it as a litter box. That will help protect children from exposure to animal waste.
- Avoid using makeup, containers, cookware, or tableware to store or cook foods or liquids that are not shown to be lead free.
- Remove recalled toys and toy jewelry immediately from children.
- Use only cold water from the tap for drinking, cooking, and making baby formula. Hot water is more likely to contain higher levels of lead. Most of the lead in household water usually comes from the plumbing in your house, not from the local water supply.
- Shower and change clothes after finishing a task that involves working with lead-based products such as stained glass, making bullets, or using a firing range.

WIC Children

- There are 855 infants participating in WIC in Flint.
- We are working with partners at the United Way to ensure that WIC families have access to water filters and bottled water.
- In homes with infants on WIC, if the household has documentation from an official source of unsanitary water supply issues, that family may be eligible to receive ready-to-feed formula. Families should contact WIC to see if they are eligible.
- Each household would have to be looked at on an individual basis.
- WIC cannot cover bottled water.

Subject: RE: 151008. News release

We're still getting some questions answered on our end but for now, the only edit I have would be to define DEQ and MDHHS in the fourth paragraph where it begins with 'State agencies today…'

For the event tomorrow, we have an outline of what Nick and Eden would cover below:

Director Lyon
Recommendations for residents
Recommendations for schools
Additional MDHHS staff available to assist with data and case management

Eden Wells
NSF Certification
Additional testing?
Lead exposure reduction tips

Governor Rick Snyder
Executive Office of the Governor
P.O. Box 30013
Lansing, Michigan 48909

Governor Snyder,

Thank you for your letter on October 2, 2015, regarding the state of Michigan's plans to respond to the crisis regarding the drinking water in Flint, Mich. I encourage you to immediately implement the action plan outlined so that Flint residents can have safe drinking water.

Moreover, you asked for my assistance in working with federal agencies to address this issue. Due to the urgent nature of this issue, I want to update you that my staff and I are working closely with Senators Stabenow and Peters and have been in communication with the appropriate agencies. I will continue to do everything I can to help address this issue at the federal level.

On September 22, 2015, I previously wrote letters to the U.S. Environmental Protection Agency, Department of Health and Human Services, Centers for Disease Control and Federal Emergency Management Agency requesting immediate assistance to provide safe drinking water to Flint.

In addition, on March 26, 2015, I sent a letter to the U.S. Environmental Protection Agency asking them to clarify if there is any statutory limitation on states to forgive the principal on loans made through the Safe Drinking Water State Revolving Fund.

Again, thank you for beginning to utilize your office's resources to help address the water quality in Flint. I look forward to working with you on the shared goal of helping the residents of Flint have safe drinking water.

Sincerely,

Dan Kildee

Washington, DC 20460

Director Tom Frieden
Centers for Disease Control and Prevention
1600 Clifton Road
Atlanta, GA 30329

Secretary Burwell, Administrator McCarthy, Administrator Fugate and Director Frieden:

Recent developments regarding the level of lead in the water in one of the communities I represent, Flint, Mich., have raised significant concerns about the safety of its drinking water. For this reason, I am requesting immediate resources to provide safe drinking water to the residents of Flint until additional testing can be completed that confirms the water is safe, particularly for young children.

Although the city of Flint and the Michigan Department of Environmental Quality have conducted tests and taken the position that the lead level in the water is safe and below the action level, there are significant questions about the efficacy of their testing. In fact, Dr. Marc Edwards of Virginia Tech University, an established drinking water expert, conducted his own tests as part of a study that determined the water in Flint was above the lead action level.

Additionally, yesterday the Greater Flint Health Coalition, a group of health professionals in the community, released a report showing elevated blood lead levels in residents in Flint, particularly in young children. In response, the Coalition has requested that the Genesee County Health Department release a health advisory indicating that the water in Flint is unsafe to drink.

Thus, I am requesting resources from your agency to provide clean drinking water to the residents of Flint until additional testing can determine when the water will be safe to drink and a long-term solution can be implemented.

This is a serious health issue, particularly for young children, and until the water is demonstrated to be safe, immediate action must be taken to ensure Flint's residents have potable drinking water.

I look forward to working with you and thank you for your immediate attention.

Sincerely,

Dan Kildee

March 26, 2015

Ms. Gina McCarthy
Administrator, Environmental Protection Agency
1101 A
1200 Pennsylvania Avenue, N.W.
Washington, D.C. 20460

Dear Administrator McCarthy:

My office has reached out to both the Office of Congressional and Intergovernmental Relations at the Environmental Protection Agency (EPA) and the Congressional Research Service (CRS) to determine if there are any statutory limitations on states to forgive the principal on loans made through the Safe Drinking Water State Revolving Fund (SDWSRF) program. After talking to both of these offices, there seems to be a difference in legal opinion between the two interpretations as to whether forgiveness of principal is statutorily allowed, and I am requesting further clarification.

The City of Flint, Mich., located in my district, continues to endure prolonged and severe financial stress due to the loss of thousands of manufacturing jobs, resulting in population loss and an erosion of its tax base. In an effort to improve the city's financial stability, Flint decided to end its 50-plus-year affiliation with the City of Detroit Water and Sewage Department in April of 2013. Instead, Flint would become a partner in the Karegnondi Water Authority (KWA) to bring raw water from Lake Huron to the city.

The water contract between the City of Detroit Water and Sewage Department and Flint was terminated in May of 2014.The KWA, however, will not be able to provide water to the city until its pipeline from Flint to Lake Huron is completed at the end of 2016. To fill the gap in service until the KWA is completed, Flint has turned to the Flint River as its current source for raw water. The Flint River has proven to have an inconsistent quality because of high levels of organic matter. Flint water officials have used high levels of trihalomethanes to treat the occasional elevated levels of organic matter in the water. On December 16, 2014, the Michigan Department of Environmental Quality cited the city for being in violation of water standards determined by the Safe Drinking Water Act (SDWA) due to high levels of trihalomethanes. In accordance with the SDWA, a cautionary notice about the citation was subsequently sent to residents.

Since its citation, Flint has engaged local and state leaders to find a solution for the poor quality of the water. On February 3, 2015, the state gave the city close to $2 million to hire consultants to assess the condition and find leaks in the water infrastructure system. While this funding is a step in the right direction, it is not nearly enough to significantly improve the water quality.

This background on Flint's water situation is to point out that the SDWA is intended to improve drinking water in America's cities, such as Flint, by creating water quality standards and funding the SDWSRF to invest in water infrastructure. In addition to the high levels of trihalomethanes, the poor condition of water infrastructure in Flint, regardless of the water's source, contributes to discolored and poor tasting water. Furthermore, Flint currently suffers an over 35 percent loss ratio of water between the treatment plant and the end user. In the past, Flint has benefitted from the SDWSRF and currently has close to $22 million in outstanding loans from it that the city has used to repair the water system. The financial stress of making payments on these loans, however, has prevented the city from making the necessary ongoing investments to its water infrastructure.

To decrease the burden of these loans, on January 18, 2015, Flint requested that the state of Michigan, as the responsible party in appropriating funds from the SDWSRF to local governments, forgive part of the principal. The state responded that forgiving the principal is not an option as the state does not have the authority to do so.

In response to the state's reply, on February 10, 2015, my staff reached out to the Office of Congressional and Intergovernmental Relations at the EPA to ask if they were aware of any statutory language that prevents principal forgiveness of loans made under the SDWSRF. On February 25, 2015, the EPA responded that they "could find … no provision that would allow a state to [forgive an existing loan made from a Safe Drinking Water Act state revolving fund]."

On February 23, 2015, my staff also reached out to the CRS for their legal opinion on this matter. Although they could not find any precedent for doing so, the CRS did find two instances in statute that, in their opinion, allows states to forgive the principal on loans made through the SDWSRF.

First, SDWA sec. 1452(d)(1), 42 USC 300j-12(d)(1), states – "Notwithstanding any other provision of this section, in any case in which the State makes a loan pursuant to subsection (a)(2) of this section to a disadvantaged community … , the State may provide additional subsidization (including forgiveness of principal)."

Second, the Consolidated and Further Continuing Appropriations Act, 2015, Pub. Law 113-235, states on page 296 – "Provided further, [t]hat not less than 20 percent but not more than 30 percent of the funds made available under this title to each State for Drinking Water State Revolving Fund capitalization grants shall be used by the State to provide additional subsidy to eligible recipients in the form of forgiveness of principal, negative interest loans, or grants (or any combination of these), and shall be so used by the State only where such funds are provided as initial financing for an eligible recipient or to buy, refinance, or restructure the debt obligations of eligible recipients only where such debt was incurred on or after the date of enactment of this Act; …."

The difference in opinion between EPA and CRS has created ambiguity for the affected parties. The ability of states to forgive portions of the principal on loans made through the SDWSRF could have a significant impact on the financial state of Flint and many other distressed municipalities across the county. I would appreciate clarification from you on what, according to EPA's interpretation of the law, statutorily prevents states from forgiving the principal on loans made under the SDWSRF.

Due to critical nature of the water quality in Flint and the impact that loan forgiveness could have on improving the quality of the water, I ask for your prompt attention to this matter.

Sincerely,

Dan Kildee
MEMBER OF CONGRESS

Hi Josh and Bob,

Here's an updated version. Bob – are the properties right on this? I'm not sure how to check ☺

Dave – this is the handout we will have for the press event tomorrow.

IS YOUR CHILD SAFE FROM LEAD POISONING?

LEARN HOW TO PROTECT YOUR FAMILY:

CREATE A LEAD SAFE HOME

What causes lead poisoning?

There are many places in a home that can put babies and children in danger of lead poisoning.

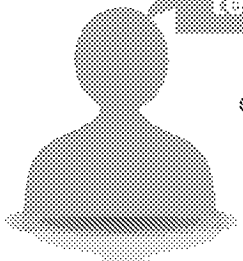
Lead paint is the #1 cause of lead poisoning in Michigan and is often found in homes built before 1978. The older the home, the more likely that painted surfaces like windows, cupboards, doors and porches will contain lead paint.

Lead poisoning occurs most often when children come in contact with lead in the air, in dust particles and in lead paint. Lead can also be found in soil, drinking water if supplied by lead pipes, certain home remedies and is used in some hobbies and occupations.

Exposure to lead particles is a serious health threat. Carefully consider where your child spends time (childcare, relatives, your home) when thinking about lead poisoning hazards.

How can I tell if my child has lead poisoning?

Talk to your doctor about testing your child's blood for lead poisoning.



When should my child be tested for lead poisoning?

Children should be tested at one and two years of age or if you think your child has been exposed to a lead hazard.

To learn more about lead poisoning prevention and blood lead testing, call the Childhood Lead Poisoning Prevention Project:

(517) 335-8885

(888) 322-4453

Take this quiz to see if your child may have lead poisoning:

Symptoms of lead poisoning can be silent—and hard to recognize. Preventing lead poisoning before it happens is the best way to keep your family safe. Take this quiz to see if your child may be at risk.

Does your child currently live in a home built before 1950 or have they lived in a home built before 1950 in the recent past? Do they spend time at or often visit a home built before 1950?

Yes No Don't know

Does your child currently live in a home built before 1978 that was recently remodeled? Have they lived in or often visited a home built before 1978 that was recently remodeled?

Yes No Don't know

Does your child have a brother, sister or playmate with lead poisoning?

Yes No Don't know

Does your child live with an adult whose job or hobby involves lead?

Yes No Don't know

Does you or your child's caregiver use home remedies that may contain lead?

Yes No Don't know

If you answered NO to all of these questions, your child is probably not at risk for lead poisoning.

If you answered YES or DON'T KNOW to any of these questions, talk to your doctor about testing your child for lead poisoning.

MAKE EVERY DAY LEAD SAFE

Safe Cleaning. Use these steps to help keep your home clean and reduce your child's risk of exposure. Use these tips to clean your windows, doors, floors, porches, stairs and child pay areas.

Put on gloves. If you do not have rubber gloves, wash your hands well after cleaning.

Use the right cleaners and disposable supplies. Use soapy cleaners or products made to remove lead dust.

Remove paint chips first. Window areas and porches often have peeling paint and lead dust. Pick up visible chips and dispose of them in a plastic bag.

Always wet-mop floors and window sills. Do not broom lead dust. Dispose of cloths after wiping each area. If using a mop, replace water frequently.

Don't use a vacuum unless it is a HEPA vacuum. It will spread lead dust into the air you breathe. Some health departments have HEPA vacuums available to borrow

Rinse after cleaning. Use clean water and a new mop head or fresh paper towels to wipe away suds.

Always empty wash water down a toilet.

Repeat these steps often when dirt and dust appear on floors, porches, window wells, window sills, stairs and children's play areas.

For Homes with Lead Pipes

If you use a water filter, be sure it meets NSF/ANSI 53 standards for lead reduction.

✓**Flush your pipes before drinking**, and only use cold water for cooking and mixing formula. Flush pipes by running the water for approximately 5 minutes.

✓**Test.** Consider contacting your local water authority to have your water tested.

Daily Lead Safe Practices

- Wash hands, bottles, pacifiers and toys often
- Always take off shoes before going into the house.
- Watch your child's diet. Foods high in calcium and iron help keep lead from being absorbed by a child's body.
- Avoid using power sanders, open-flame torches, heat guns, dry scrapers and dry sandpaper o painted surfaces.
- Fix peeling or chipping paint.
- Use a certified Repair and Remodeling Professional when making updates to your home
- Practice safe cleaning methods.

Thinking about remodeling your home? Need advice about identifying and removing lead paint? Call the Lead and Healthy Homes Section: 866-691-LEAD.

Blood Lead Levels in Flint Talking Points
October 7, 2015

Water Filters

- Our first action item is to work closely with our public and private partners to provide water filters to Flint residents and MDHHS clients.
- To meet this priority, the governor identified one million dollars in state funding to purchase water filters for Flint residents.
- The Brita SAFF-100 filters being distributed by the department and GCCARD do meet the NSF/ANSI 53 standards for drinking water treatment units.
- The Brita faucet filtration system we are distributing are National Sanitation Foundation certified to reduce lead in drinking water.
- Free water filters are available to current Michigan Department of Health and Human Services clients and Flint residents who are on the Flint water system at four locations:
    - Flint residents who are not current MDHHS clients should visit one of two Genesee County Community Action Resource Department offices to obtain a filter.
        - at 2727 Lippincott and 601 North Saginaw in Flint
    - Current MDHHS clients in the city of Flint should visit their local MDHHS office
        - At 125 E. Union St. or 4809 Clio Road
- Staff will be onsite at all four locations from 9 a.m. to 4 p.m., Monday through Friday, to distribute filters and assist residents who have questions about proper installation.
- Extended hours are being offered at the Lippincott facility only, and will run until 7 p.m. on Thursday and Friday, and from 10 a.m. to 2 p.m. on Saturday. The other three locations will maintain 9 a.m. to 4 p.m. operating hours, Monday through Friday, for filter pick up.
- Given the questions and concerns regarding the change in water source in Flint, MDHHS authorized the use of emergency services funding to provide water filters for MDHHS clients receiving assistance in the city of Flint.
- This funding will support active Family Independence Program (FIP), Food Assistance Program (FAP), Child Development and Care (CDC), State Disability Assistance (SDA), State Disability Assistance (SDA), or Social Security Insurance (SSI) recipients so that they can obtain filters that are National Sanitation Foundation (NSF) certified to remove lead and ANSI Standard 53.
- MDHHS currently serves approximately 25,000 households in Flint.

School Testing and Results

- The state today also released the first results from its free lead screening program in schools.
- Out of 13 buildings tested, four samples spread over three buildings exceeded the federal action level of 15 parts per billion.
- However, this sampling provides only an initial screen, and MDHHS toxicologists will work with DEQ to conduct further testing.
- Schools on the Flint water system should continue using filtered or bottled water to protect against potential lead exposure.

Background Information

- Initial analysis of MDHHS data found that blood lead levels (BLLs) of children in Flint have followed an expected seasonal trend; due to small numbers further analysis was initiated.
- While this analysis of blood lead levels in Flint as a whole remains true, after a comprehensive and detailed review down to the zip code level, we have found that the state analysis is consistent with that presented by Hurley.
- Director Lyon is working closely with DEQ and the administration to take active steps to reduce all potential lead exposures in Flint, and across the state.
- Our Chief Medical Executive has been in communication with the lead investigator at Hurley Children's Hospital, and we continue to work with Hurley, the city of Flint, local and state leaders to verify and analyze data trends.
- Zip code-level data does show that there has been an increase in elevated childhood blood lead levels in specific communities.
    - This does not conclusively mean that the water source change is the sole cause of the increase, but data does show an association.
    - There is an increased proportion of children with elevated Blood Levels (ELBs) in several zip codes, particularly 03 and 04. These appear to have increased over the last 1.5 years.
    - Lead exposure can occur from a number of different sources (such as paint, gasoline, solder, and consumer products) and through different pathways (such as air, food, water, dust, and soil).
    - Although there are several exposure sources, lead-based paint is still the most widespread and dangerous high-dose source of lead exposure for young children in the US and Michigan.
- We reviewed MDHHS statewide data using the same methodology used by Hurley, looking at our numbers by zip code and age ranges, and filtering out non-Flint children.
- Routine surveillance of blood lead levels does not analyze data down to the zip code level. Detailed analysis like this occurs when there is reason to focus in on precise locations or populations.

- MDHHS is working closely with the Michigan Department of Environmental Quality, Hurley Children's Hospital, the Genesee County Health Department, and community organizations to initiate further action steps.
- We understand that cost may be a barrier to following the recommendations for drinking water, which is why NSF certified filters are being distributed to residents on the Flint water system free of charge.
- MDHHS is recommending that residents follow the Public Health Advisory issued by the Genesee County Health Department, as well as take further steps to reduce exposures to all forms of lead in and around their homes.

MDHHS Stats and Facts

- 'High Risk' Zip codes (48503 and 48504)
    - Blood lead level rates among children under six years of age in the high risk zip codes (48503, 48504) were 2.7 times higher than the rest of Genesee County before the switch to Flint River Water.
    - After the switch to Flint River Water, rates in the high risk Zip codes were 3.2 times that of the rest of Genesee County.
- Other Zip codes in Flint
    - Rates of elevated blood lead levels among children under six years of age in other parts of the city of Flint were 2 times that of the rest of Genesee County before the switch to Flint River Water.
    - The magnitude of the elevated rate remained roughly the same during the period after the water source switch.
- Lead abatement through MDHHS was federally funded up until FY14 when Michigan began providing additional funds to abate homes.
- In FY14, $1.25M General Fund was added. In FY15, General Fund was bumped up to $1.75M and FY16, General Fund remains at $1.75M.

Reducing and Removing Lead Exposure

- In housing built before 1978, it can be assumed that the paint has lead unless tests show otherwise.
- Make sure your child does not have access to peeling paint or chewable surfaces painted with lead-based paint.
- Children and pregnant women should not be present in housing built before 1978 that is undergoing renovation. They should not participate in activities that disturb old paint or in cleaning up paint debris after work is completed.
- Create barriers between living/play areas and lead sources. Until environmental clean-up is completed, you should clean and isolate all sources of lead.
    - Close and lock doors to keep children away from chipping or peeling paint on walls. You can also apply temporary barriers such as contact paper or duct tape, to cover holes in walls or to block children's access to other sources of lead.

- Regularly wash children's hands and toys. Hands and toys can become contaminated from household dust or exterior soil. Both are known lead sources.
- Regularly wet-mop floors and wet-wipe window components. Because household dust is a major source of lead, you should wet-mop floors and wet-wipe horizontal surfaces every 2-3 weeks.
    - Windowsills and wells can contain high levels of leaded dust. They should be kept clean. If feasible, windows should be shut to prevent abrasion of painted surfaces or opened from the top sash.
- Take off shoes when entering the house to prevent bringing lead-contaminated soil in from outside.
- Prevent children from playing in bare soil; if possible, provide them with sandboxes. Plant grass on areas of bare soil or cover the soil with grass seed, mulch, or wood chips, if possible.
    - Until the bare soil is covered, move play areas away from bare soil and away from the sides of the house. If you have a sandbox, cover the box when not in use to prevent cats from using it as a litter box. That will help protect children from exposure to animal waste.
- Avoid using makeup, containers, cookware, or tableware to store or cook foods or liquids that are not shown to be lead free.
- Remove recalled toys and toy jewelry immediately from children.
- Use only cold water from the tap for drinking, cooking, and making baby formula. Hot water is more likely to contain higher levels of lead. Most of the lead in household water usually comes from the plumbing in your house, not from the local water supply.
- Shower and change clothes after finishing a task that involves working with lead-based products such as stained glass, making bullets, or using a firing range.

WIC Children

- There are 855 infants participating in WIC in Flint.
- We are working with partners at the United Way to ensure that WIC families have access to water filters and bottled water.
- In homes with infants on WIC, if the household has documentation from an official source of unsanitary water supply issues, that family may be eligible to receive ready-to-feed formula. Families should contact WIC to see if they are eligible.
- Each household would have to be looked at on an individual basis.
- WIC cannot cover bottled water.

Questions with some draft answers. Not by any means final, but here's first crack at this.

Flint Drinking Water

Media Q&A

Oct. 8, 2015

Switch to Great Lakes Water Authority

What finally pushed the state to this decision?
This was the City's request, and the Governor supports it, based on several key factors: In the near term, DWSD water will be easier to manage. It comes from a more stable source than the river, it is fully optimized for corrosion control, and it is clear that residents of Flint have more confidence in this water source.

Will this solve Flint's water crisis?
In combination with the other short term, intermediate term and long-term steps outlined last week, this move represents a big step forward. Flint still has serious system maintenance challenges it must address.

If you're saying residents will still have lead because of their plumbing, does that mean every other city in this state has a lead problem?
Many areas of the state have lead in their infrastructure mix.

Where's the state getting the money to fund this?
We have submitted a formal request to lawmakers via the appropriations process.

Where's the city getting the money to fund this?
The city is contributing all it can, and is getting assistance for its match from the Mott Foundation.

How long will the switch take?
The switch will be completed by the City and Great lakes Water Authority, but our understanding is that it can be accomplished in the very near term once the arrangements are complete.

How long will it take before Detroit's corrosion controls provide protection for Flint?
It will take some time for the corrosion control additives to build on pipe walls throughout the system. Estimates vary. The state can assure we will commence monitoring of the system early 2016 and report results as we get them to keep the community updated.

Why do residents still need to use filters and bottled water?
The filters and bottled water are responsible precautions for any resident concerned about lead exposure.

Do the filters actually work? We've been hearing they don't protect for lead.
Yes, the filters work. They are all certified for lead removal by the National Sanitation Foundation.

The filters are only good for 100 gallons. What happens when they are used up?
They will need to be replaced. And residents can get a new filter.

What about restaurants?

What's going to be done about lead service lines?
Long term, this is the only permanent solution to lead exposure. The state has committed to helping the city accomplish this goal long term.

Do you wish you'd made this switch sooner?
We support the City's decision. We can't look backward. We feel the state has responded quickly and effectively as information has surfaced, been investigated and verified. While the City of Flint is, right now, in compliance with the federal Lead and Copper Rule, we recognize there is a disparity between surveillance testing and other testing happening in the community that we need to better understand and we are working on developing our knowledge.

<u>Schools testing</u>
What do these results say?
The results say we need to further investigate Flint schools and help the schools find clearer causes for some the results we got.

Any theories about what's going on?
It is possible there are specific points in the plumbing that have lead components which need to be replaced, but we can't say anything definitively until we perform an investigation at each school.

Do the schools have lead service lines? If not, why are they getting such high results?
The schools we tested initially do not have lead service lines. There are a few possible reasons why lead is being detected at specific points in the buildings and not others. When we know things definitively, we will make the information public.

How long do the schools have to stay on bottled water? Just until the switch to Detroit, or longer term?
We are encouraging the schools to continue their current protective measures as a precaution until we can get into the buildings and get more answers.

Why did you only test 13 schools?
That was what the Flint Public Schools requested.

What happens to other schools?
We will test all the schools in Flint if they request it.

What about the schools that can't afford to update their entire plumbing systems?
This is why we are having plumbing assessments completed. There is no way to know yet what each building will require.

How confident are you in your testing? You've got results all over the map.
We are confident that our testing meets the requirements for the federal Lead and Copper Rule, which is surveillance monitoring. The bigger question is whether surveillance monitoring meets the public health protection standards that Lead Exposure Testing methods do. The EPA is working on that question now, and we are engaged in that dialogue.

What do you mean by "health exposure testing"? What are you doing next?

The 90th percentile of your results is still below 15 ppb. Does that make you more or less confident in your testing and in your protocols?
It makes us confident that the testing protocol delivers consistent results. But again, it does raise questions about whether this testing method shows what people think it does or what they really want to know, which is actual lead exposure from lead plumbing in a home.

Any idea how long kids have been exposed to lead? Was it before the move to the Flint River?
That is possible. We don't know.

How does the state bring this new information into the broader picture of kids' lead exposure across the state?

Gov. Rick Snyder: Move back to Detroit water provides best protection for public health in Flint

State, Mott Foundation and city form partnership to fund switch

FLINT, Mich. – Flint families and children will be better protected by reconnecting with the Great Lakes Water Authority as the source of the city's drinking water, Gov. Rick Snyder said.

Snyder said Thursday that he will request the state Legislature to provide a portion of the $12 million needed to reconnect with the authority, with the Flint city government providing $2 million and the Charles Stewart Mott Foundation donating $4 million.

The Michigan Department of Health and Human Services and the Department of Environmental Quality today also committed an additional $3.5 million for water filters, free lead testing through the state laboratory for Flint water customers, and hiring additional staff to conduct health exposure monitoring for lead in drinking water.

Flint city leaders requested the state's help to fund the reconnection after a Wednesday meeting of Flint's Technical Advisory Committee. Flint's move to the Great Lakes Water Authority is expected to cost about $1.3 million per month until the Karegnondi Water Authority is completed next summer.

"All Flint residents need clean, safe drinking water," Snyder said. "The technical experts helping the city on its water advisory all agree this move back to the Great Lakes Water Authority provides the best public health protection for children and families. This effort today is the result of people coming together to solve a problem. I appreciate Detroit's willingness to reconnect with Flint, the Mott Foundation's generous donation, and the dedication of all parties to come together to protect Flint families and children."

The move to Detroit water, which is drawn from Lake Huron, carries many public health benefits. As large bodies of water, the Great Lakes are naturally prone to fewer problems from

large rain events and other runoff issues that can be present in shallower rivers. Additionally, the Great Lakes Water Authority has already fully optimized its corrosion control, using phosphates to help coat the insides of pipes and prevent lead from leaching into the water.

However, reconnecting with the authority will not completely resolve the city's problem with lead service lines or aging infrastructure. It will take time for pipes in Flint to become coated with the phosphate corrosion control. Additionally, some households in the city could experience lead in their drinking water until all lead pipes and plumbing are replaced.

To best protect public health, Snyder said state and local authorities will continue to carry out steps outlined on Oct. 2 in a comprehensive action plan, including continued testing, the use of faucet filters and providing residents with accurate information about steps to eliminate lead in water.

Free filters are available for current MDHHS clients at the 125 E. Union St. or 4809 Clio Road MDHHS office locations.

For residents who are not currently enrolled in MDHHS assistance programs, free filters are available at the Genesee County Community Action Resource Department offices at 2727 Lippincott and 601 North Saginaw in Flint. Staff will be at all four locations from 9 a.m. to 4 p.m., Monday through Friday, to distribute filters and assist residents who have questions about proper installation.

At the Lippincott location only, extended hours will be offered this weekend, including until 7 p.m. on Thursday and Friday and from 10 a.m. to 2 p.m. on Saturday.

Other good practices for residents concerned about lead include turning on the cold water tap and running the water until it's as cold as it will go. Additionally, only use cold water for cooking, drinking and especially mixing baby formula.

School test results released; more investigation planned

The state today also released the first results from its lead screening program in schools and homes. Of 37 total samples taken at 13 buildings, four samples spread over three buildings exceeded the federal action level of 15 parts per billion.

However, this sampling provides only an initial screen, and the state is committing to further testing water and inspecting plumbing at these schools. Until testing is complete, schools are advised to continue using bottled water and filtration as a precaution to protect children.

In addition, free testing is still available for any other Flint school, including daycares and Head Starts. Free testing is also available for any Flint resident.

Additional information, including more detailed lead screening results, is available at www.michigan.gov/flintwater.

Flint water action plan – next steps
Communications & Outreach Plan
DRAFT (10/7/2015)

Situation overview:
Water and concerns about lead levels in the city of Flint have been escalating since the city moved to the Flint River as its source of water after switching from DWSD in the spring of 2014 with local plans to move to a new water authority – the Karegnondi Water Authority or KWA – slated to be online in June 2016. Numerous tests have shown the water overall to be safe with non-detect lead levels when leaving Flint water treatment plan and below widely recognized federal action levels (15 ppb) in most surveillance monitoring. However, like many communities across the state and country, Flint's infrastructure is aging and hasn't been updated in decades, facing outdated lead service connections and lead pipes in individual homes. Some water tests have indicated definite elevated lead levels within some homes, neighborhoods and zip codes, with some children in those same areas also experiencing elevated lead levels, causing great concern for all parties.

Race, poverty and local governance (with city's history of emergency managers) have all been raised as issues or allegations, adding to the challenges.

Given all factors involved, it has been deemed prudent and best for public health and restoring confidence in water system to temporarily switch back to Detroit water, now governed by an entity called the Great Lakes Water Authority, as the city's water source until the new KWA is completed. A special technical advisory committee comprised of public health and drinking water experts has concurred and recommended such a path. The cost to do so is estimated at about $12M over nine months. The state is proposing to cover about half of the cost with the city ($2M) and community organizations (C.S. Mott Foundation at $4M) pledging to cover the balance.

Goals/objectives:
- Ensure governor and state focus is on protecting public health and ensuring safe, accessible drinking water and all the action steps that are being taken to help ensure those two priorities.
- Minimize and diffuse finger pointing and tension between all stakeholders.
- Effective, concise communication that makes it clear for both residents and schools what next steps are and that state is committed to doing everything it can to help address situation in partnership and collaboration with city and community leaders.
- Restore confidence in Flint water.
- Convey shared responsibility to address.

Action steps/tools with timeline:
Wednesday, Oct. 7
- Coordinate with MI Depts of Environmental Quality and Health & Human Services
- Coordinate with Mott Foundation

CONFIDENTIAL/DRAFT

- Find and finalize venue, logistics, establish security plan
    - Confirm live streaming capability and AV details (podium, sound system, mult box, lavalier and hand held mics, etc).
    - Determine visuals and room set up. Current plan is simply U.S., state of MI and city of Flint flags with "Taking Action on Flint Water" podium sign. (See attached).
    - Assure protest area, access and entrance points and plan, attendee list and contingency plans, etc
- Follow up discussions with DWSD, GLWA members (city, Oakland, Wayne & Macomb counties) and Mayor Duggan.
- Coordinate with Flint city communications
- Coordinate with DWSD/GLWA communications
- Coordination/briefing to MDE Superintendent of Schools Brian Whiston and DOC Director Heidi Washington

2 – 4:30 p.m. (TENATIVE)
- Expanded technical advisory committee meets to discuss and evaluate corrosion control plans as well as potential implications and benefits of switch back to Detroit water.

3:30 p.m.
Governor briefs Senate and House Republican leaders

4:30 p.m. (TENTATIVE – dependent on timing and outcome of technical advisory committee)
- Send media advisory with basic notice of planned 10 a.m. press conference "to make an announcement re: Flint water"
- Scheduling invites Sen. Ananich and Reps. Neely and Phelps to press conference (no specific details yet)

5 p.m.
Touch base conference call with EO, DEQ, DHHS teams to close loops, share all latest information, determine last needed action items.

6 p.m.
- Send draft plan, release and all related materials to Governor and team for review and edit.

Thursday, Oct. 8
8 a.m.
- Team arrives in Flint to set up
- Final edits on all materials due to comms team.
- DEQ Director Wyant briefs Sen. Ananich and Reps. Neely and Phelps on specifics of next steps/plan briefs
- Governor calls Cong. Dale Kildee and briefs him on next steps/plan
- Bill McBride briefs U.S. Sens. Gary Peters & Debbie Stabenow

CONFIDENTIAL/DRAFT

9 a.m.

- Meeting with Governor, Flint Mayor Walling, DEQ, DHHS, Mott Foundation to finalize details
- DEQ water testing lab and DHHS public health teams contact the Flint schools to share the testing results and next steps on protocol, actions
    - Flint Schools Superintendent Bilal Tawwab
    - Genesee Co. ISD Superintendent
- DHHS Dr. Eden Wells briefs Genesee Co. Health Dept/Health Officer Mark Valacak
- DEQ briefs Genesee Co. Drain Commissioner Jeff Wright
- SBO Director John Roberts contacts Senate and House Appropriations Chairs (Sen. Dave Hildendbrand & Rep. Al Pscholka) re: Detroit water switch and supplemental request
- DEQ Director Wyant and DHHS Director Nick Lyon contact respective budget subcommittee chairs and vice chairs (Sens. Marleau & Green and Reps. Roger Victory & Chris Afendoulis) re: Detroit water switch and supplemental request
- Harvey Hollins/Dennis Muchmore brief/invite other key stakeholders TBD
    - Select group of ministers and pastors
    - Flint Chamber
    - UM Flint
    - United Way
    - Flint Community Foundation

9:45 – 10 a.m.

- Prebriefing to walk through press conference run of show, last Qs, etc.,

10 – 10:30 a.m.

- Press conference kicks off

(SEE RUN OF SHOW/BRIEFING)

10:05 a.m.

- News release goes out; posted to web site
- Social media posts

<u>Qs/issues</u>

Funding positioning – Gov is "asking Legislature," "committed to finding match", etc.
Roles of legislators, i.e. Cong. Kildee, Sen. Ananich, Reps. Neely and Phelps

Subject: Flint water committee

Hello. This is Mark Hicks, a reporter at The Detroit News. I am trying to reach representatives for Gov. Snyder's office tonight regarding a recommendation from a committee of experts on Wednesday to reconnect Flint to Detroit's water system to improve the drinking water quality. Has the governor's office received this recommendation, and does it impact the announcement tomorrow regarding Flint's water system?

Please feel free to let me know if you or another representative can reach me before 8:30 p.m. EST tonight for a brief phone interview or statement regarding this recommendation. I realize this is late and short notice after-hours, and some information might not be immediately accessible, but any help provided will be greatly appreciated and better inform our readers. Thank you for your time.

Hi there Mark –

Happy to help. What I'd say is that this is an option we're helping thoroughly review and consider with the city, and the technical advisory committee's work is much appreciated in this matter. We're also focused on working hard in collaboration with all and implementing the key action steps outlined on Oct. 2 to help protect public health and ensure safe, accessible drinking water for Flint residents.

As you noted, we have slated a time tomorrow morning for the Governor and administration with city and community leaders to provide an update on Flint water so hoping you got those details. Stay tuned.

Thanks and best,
SW

Greetings Mayor and Jason –

Here is proposed run of show for tomorrow, along with the draft release. Again, per earlier conversations, highly confidential and not for sharing as dependent on final details getting worked out at tomorrow's 9 a.m. meeting.

On the release, please note in particular the placeholder for the Mayor's quote.

Please review and let us know of any edits or concerns you may have. We look forward to your feedback. If there's a chance you can get us the quote sometime yet this evening, that'd be fantastic.

Also, we'd like to put a city media contact here as well. Assuming that's Jason. Just wanted to verify which contact info should we use?

Thanks again. Glad to be working and collaborating with the city on this very challenging issue.

Best regards,

SW

Run of show & comment topics below:

9:45 AM – 10:00 AM Pre-Brief with all speakers

10:00 AM – 10:01 AM Harvey Hollins kicks off press conference; introduces Governor

Release:

Gov. Rick Snyder: Move back to Detroit water provides best protection for public health in Flint

State, Mott Foundation and city form partnership to fund switch

FLINT, Mich. – Flint families and children will be better protected by reconnecting with the Great Lakes Water Authority as the source of the city's drinking water, Gov. Rick Snyder said.

Snyder said Thursday that he will request the state Legislature to provide half, or $6 million, of the $12 million needed to reconnect with the authority. The Flint city government will provide $2 million and the Charles Stewart Mott Foundation will donate $4 million.

"All Flint residents need clean, safe drinking water," Snyder said. "The technical experts helping the city on its water advisory all agree this move back to the Great Lakes Water Authority provides the best public health protection for children and families. This effort today is the result of people coming together to solve a problem. I appreciate Detroit's willingness to reconnect with Flint, the Mott Foundation's generous donation, and the dedication of all parties to come together to protect Flint families and children."

The Michigan Departments of Environmental Quality and Health and Human Services today also committed an additional $3.5 million for water filters, free lead testing through the state laboratory for Flint water customers, and hiring additional staff to conduct health exposure monitoring for lead in drinking water.

Flint city leaders requested the state's help to fund the reconnection after a Wednesday meeting of Flint's Technical Advisory Committee. Flint's move to the Great Lakes Water Authority is expected to cost about $1.3 million per month until the Karegnondi Water Authority is completed next summer.

INSERT MAYOR QUOTE HERE

The move to Detroit water, which is drawn from Lake Huron, carries many public health benefits. As large bodies of water, the Great Lakes are naturally prone to fewer problems from large rain events and other runoff issues that can be present in shallower rivers. Additionally, the Great Lakes Water Authority has already fully optimized its corrosion control, using phosphates to help coat the insides of pipes and prevent lead from leaching into the water.

However, reconnecting with the authority will not completely resolve the city's problem with lead service lines or aging infrastructure. It will take time for pipes in Flint to become coated with the phosphate corrosion control. Additionally, some households in the city could experience lead in their drinking water until all lead pipes and plumbing are replaced.

INSERT MOTT FOUNDATION QUOTE HERE

To best protect public health, Snyder said state and local authorities will continue to carry out steps outlined on Oct. 2 in a comprehensive action plan, including continued testing, the use of faucet filters and providing residents with accurate information about steps to eliminate lead exposure.

Free filters are available for current MDHHS clients at the 125 E. Union St. or 4809 Clio Road MDHHS office locations. For residents who are not currently enrolled in MDHHS assistance programs, free filters are available at the Genesee County Community Action Resource Department offices at 2727 Lippincott and 601 North Saginaw in Flint. Staff will be at all four locations from 9 a.m. to 4 p.m., Monday through Friday, to distribute filters and assist residents who have questions about proper installation. At the Lippincott location only, extended hours will be offered this weekend, including until 7 p.m. on Thursday and Friday and from 10 a.m. to 2 p.m. on Saturday.

Other good practices for residents concerned about lead include turning on the cold water tap and running the water until it's as cold as it will go. Additionally, only use cold water for cooking, drinking and especially mixing baby formula.

School test results released; more investigation planned

The state today also released the first results from its lead screening program in schools and homes. Of 37 total samples taken at 13 buildings, four samples spread over three buildings exceeded the federal action level of 15 parts per billion.

However, this sampling provides only an initial screen, and the state is committing to further testing water and inspecting plumbing at these schools. Until testing is complete, schools are advised to continue using bottled water and filtration as a precaution to protect children.

In addition, free testing is still available for any other Flint school, including daycares and Head Starts. Free testing is also available for any Flint resident.

Additional information, including more detailed lead screening results, is available at www.michigan.gov/flintwater.

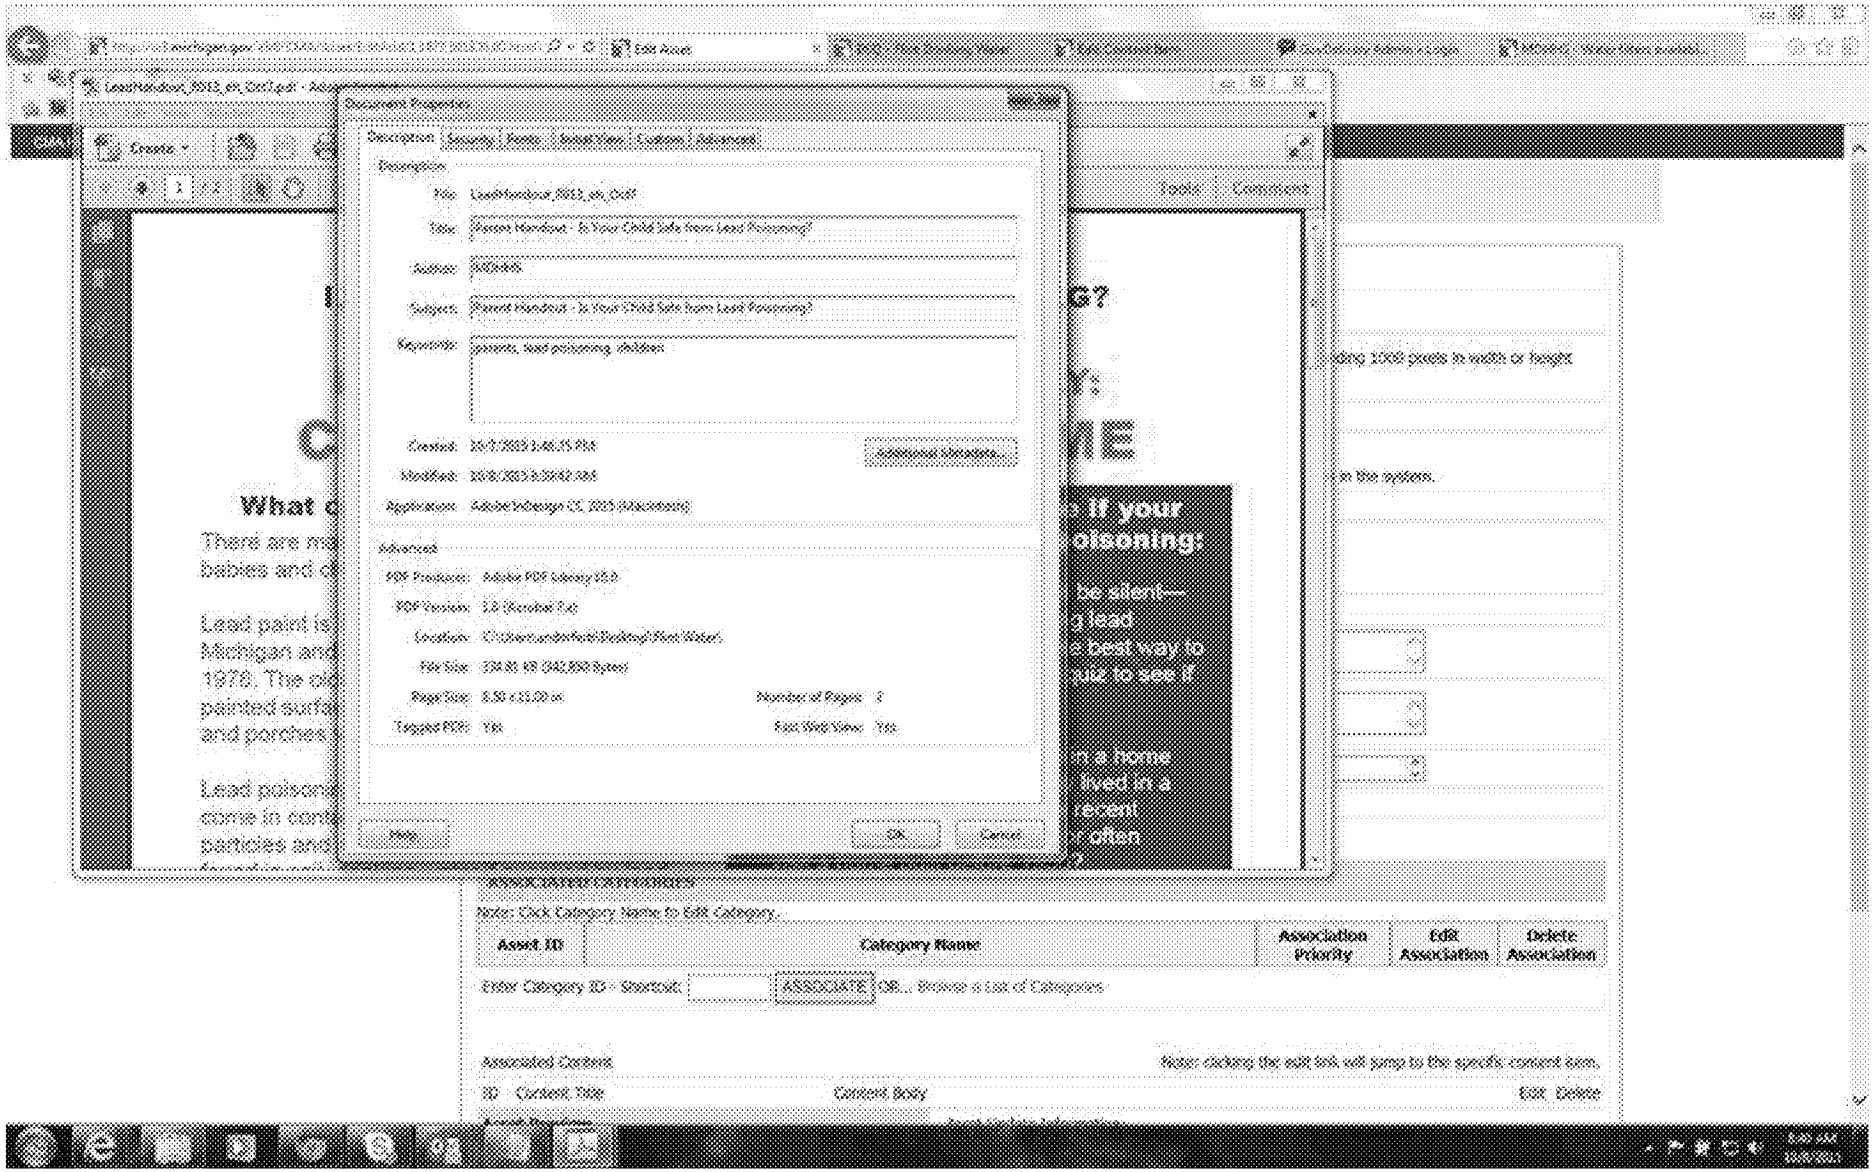
That has been updated.

Actually, the PDF did not have the Document Properties, but I was able to take them from the last version. Obviously, we are in the middle of an important issue right now, but for future reference, you can find the Document Properties by right clicking on any PDF and a info box will appear:



If you have Adobe Acrobat Standard or Professional you should be able to complete these fields in any PDF that you open. If you don't have either of those programs, they can be filled in using PDF Creator when documents are converted from Word to PDF. Not sure about how this works with other programs such as Illustrator.

Hi Josh and Bob,

Here's an updated version. Bob – are the properties right on this? I'm not sure how to check ☺

Dave – this is the handout we will have for the press event tomorrow.

Subject: Re: Updated press release with Harvey's edits

Sorry to weigh in so late. I would suggest replacing "protection" with "option" or "solution" in the headline, and then in the lede change "will be better protected" to "can count on reliable water service moving forward" -

I feel like the use of protection has certain negative implications - what are they being protected from? Evil Republicans? The state? The dirty water they have been drinking up until this point? Don't want it to get spun that way.

Gov. Rick Snyder: Move back to Detroit water provides best protection for public health in Flint

State, Mott Foundation, city form partnership to fund switch until KWA is ready

FLINT, Mich. – Flint families and children will be better protected by reconnecting with the Great Lakes Water Authority as the source of the city's drinking water until the Karegnondi Water Authority pipeline is completed, Gov. Rick Snyder said.

Snyder said Thursday that he will request the state Legislature to provide half, or $6 million, of the $12 million needed to reconnect with the authority. The Flint city government will provide $2 million and the Charles Stewart Mott Foundation will donate $4 million.

"All Flint residents need clean, safe drinking water," Snyder said. "The technical experts helping the city on its water advisory all agree this move back to the Great Lakes Water Authority provides the best public health protection for children and families. This effort today is the result of people coming together to solve a problem. I appreciate Detroit's willingness to reconnect with Flint, the Mott Foundation's generous donation, and the dedication of all parties to come together to protect Flint families and children."

The Michigan Departments of Environmental Quality and Health and Human Services today also committed an additional $3.5 million for water filters, free lead testing through the state laboratory for Flint water customers, and hiring additional staff to conduct health exposure monitoring for lead in drinking water.

Flint city leaders requested the state's help to fund the reconnection after a Wednesday meeting of Flint's Technical Advisory Committee. Flint's move to the Great Lakes Water Authority is expected to cost about $1.3 million per month until the Karegnondi Water Authority is completed next summer.

INSERT MAYOR QUOTE HERE

The move to Detroit water, which is drawn from Lake Huron, carries many public health benefits. As large bodies of water, the Great Lakes are naturally prone to fewer problems from large rain events and other runoff issues that can sometimes be present in shallower rivers. Additionally, the Great Lakes Water Authority has already fully optimized its corrosion control, using phosphates to help coat the insides of pipes and prevent lead from leaching into the water.

However, reconnecting with the authority will not completely resolve the city's problem with lead service lines or aging infrastructure. It will take time for pipes in Flint to become coated with the phosphate corrosion control. Additionally, some households in the city could experience lead in their drinking water until all lead pipes and plumbing are replaced.

INSERT MOTT FOUNDATION QUOTE HERE

To best protect public health, Snyder said state and local authorities will continue to carry out steps outlined on Oct. 2 in a comprehensive action plan, including continued testing, the use of faucet filters and providing residents with accurate information about steps to eliminate lead exposure.

Free filters are available for current MDHHS clients at the 125 E. Union St. or 4809 Clio Road MDHHS office locations. For residents who are not currently enrolled in MDHHS assistance programs, free filters are available at the Genesee County Community Action Resource Department offices at 2727 Lippincott and 601 North Saginaw in Flint. Staff will be at all four locations from 9 a.m. to 4 p.m., Monday through Friday, to distribute filters and assist residents who have questions about proper installation. At the Lippincott location only, extended hours will be offered this weekend, including until 7 p.m. on Thursday and Friday and from 10 a.m. to 2 p.m. on Saturday.

Other good practices for residents concerned about lead include turning on the cold water tap and running the water until it's as cold as it will go. Additionally, only use cold water for cooking, drinking and especially mixing baby formula.

School test results released; more investigation planned

The state today also released the first results from its lead screening program in schools and homes. Of 37 total samples taken at 13 buildings, four samples spread over three buildings exceeded the federal action level of 15 parts per billion.

However, this sampling provides only an initial screen, and the state is committing to further testing water and inspecting plumbing at these schools. Until testing is complete, schools are advised to continue using bottled water and filtration as a precaution to protect children.

In addition, free testing is still available for any other Flint school, including daycares and Head Starts. Free testing is also available for any Flint resident.

Additional information, including more detailed lead screening results, is available at www.michigan.gov/flintwater.

Gov. Rick Snyder: Move back to Detroit water provides best protection for public health in Flint

State, city, Mott Foundation, join to fund switch until KWA is ready

FLINT, Mich. – Flint families and children will be better protected by reconnecting with the Great Lakes Water Authority as the source of the city's drinking water until the Karegnondi Water Authority pipeline is completed, Gov. Rick Snyder said.

Snyder said Thursday that he will request the state Legislature to provide half, or $6 million, of the $12 million needed to reconnect with the authority through next summer, when the KWA is expected to be completed. The Flint city government will provide $2 million and the Charles Stewart Mott Foundation has committed $4 million.

"All Flint residents need clean, safe drinking water," Snyder said. "The technical experts helping the city on its water advisory all agree this move back to the Great Lakes Water Authority provides the best public health protection for children and families. This effort today is the result of people coming together to solve a problem. I appreciate Detroit's willingness to reconnect with Flint, the Mott Foundation's generous commitment, and the dedication of all parties to come together to protect Flint families and children."

Flint city leaders requested the state's help to fund the reconnection and to assist with health and infrastructure issues. Flint's move to the Great Lakes Water Authority is expected to cost about $1.3 million per month until the Karegnondi Water Authority is completed next summer.

"It's heartening to know so many people are working at so many levels to bring safe, clean water back to Flint," Mott Foundation President Ridgway White said. "We believe this transitional solution is the right and necessary thing to do, and we're glad we could help the state and the city make it happen."

The move to Detroit water, which is expected to carry, carries many public health benefits. As large bodies of water, the Great Lakes are naturally prone to fewer problems from large rain events and other runoff issues that can sometimes be present in shallower rivers. Additionally, the Great Lakes Water Authority water already has additional corrosion control, using phosphates to help coat the insides of pipes and limit lead from leaching into the water.

However, reconnecting with the authority will not completely resolve the city's problem with lead service lines or aging infrastructure. It will take time for pipes in Flint to become coated with the phosphate corrosion control. Additionally, some households in the city could experience lead in their drinking water until all lead pipes and plumbing are replaced.

"Reconnecting to Detroit is the fastest way to deliver clean, safe water to Flint and stabilize the infrastructure system," Flint Mayor Dayne Walling said. "I appreciate the state, the Mott Foundation, Detroit, and the county's participation in a solution for Flint's water problems. The health and safety of Flint's families, children and seniors is my top priority, and reconnecting to Detroit is a major step that the city could not take alone given budget constraints."

To best protect public health, Snyder said state and local authorities will continue to carry out steps outlined on Oct. 2 in a comprehensive action plan, including continued testing, the use of faucet filters and providing residents with accurate information about steps to eliminate lead exposure. The Michigan Departments of Environmental Quality and Health and Human Services today also committed an additional $3.5 million for water filters, free lead testing through the state laboratory for Flint water customers, and hiring additional staff to conduct health exposure monitoring for lead in drinking water.

Free filters are available for current MDHHS clients at the 125 E. Union St. or 4809 Clio Road MDHHS office locations. For residents who are not currently enrolled in MDHHS assistance programs, free filters are available at the Genesee County Community Action Resource Department offices at 2727 Lippincott and 601 North Saginaw in Flint. Staff will be at all four locations from 9 a.m. to 4 p.m., Monday through Friday, to distribute filters and assist residents who have questions about proper installation. At the Lippincott location only, extended hours will be offered this weekend, including until 7 p.m. on Thursday and Friday and from 10 a.m. to 2 p.m. on Saturday.

Other good practices for residents concerned about lead include turning on the cold water tap and running the water until it's as cold as it will go. Additionally, only use cold water for cooking, drinking and especially mixing baby formula.

School test results released; more investigation planned

The state today also released the first results from its lead screening program in schools and homes. Of 37 total samples taken at 13 buildings, four samples spread over three buildings exceeded the federal action level of 15 parts per billion.

However, this sampling provides only an initial screen, and the state is committing to further testing water and inspecting plumbing at these schools. Until testing is complete, schools are advised to continue using bottled water and filtration as a precaution to protect children.

In addition, free testing is still available for any other Flint school, including daycares and Head Starts. Free testing is also available for any Flint resident.

Hi Dave,
This is Beth LeBlanc from the Times Herald in Port Huron.
I watched some of Snyder's announcement this morning on Flint returning to Detroit water. Just wanted to clarify, because I think I missed it – the return to Detroit water would just be until the KWA line is complete, right?

State, city, Mott Foundation, join to fund switch until KWA is ready

FLINT, Mich. - Flint families and children will be better protected by reconnecting with the Great Lakes Water Authority as the source of the city's drinking water until the Karegnondi Water Authority pipeline is completed, Gov. Rick Snyder said.

Snyder said Thursday that he will request the state Legislature to provide half, or $6 million, of the $12 million needed to reconnect with the authority through next summer, when the KWA is expected to be completed. The Flint city government will provide $2 million and the Charles Stewart Mott Foundation has committed $4 million.

"All Flint residents need clean, safe drinking water," Snyder said. "The technical experts helping the city on its water advisory all agree this move back to the Great Lakes Water Authority provides the best public health protection for children and families. This effort today is the result of people coming together to solve a problem. I appreciate Detroit's willingness to reconnect with Flint, the Mott Foundation's generous commitment, and the dedication of all parties to come together to protect Flint families and children."

Flint city leaders requested the state's help to fund the reconnection and to assist with health and infrastructure issues. Flint's move to the Great Lakes Water Authority is expected to cost about $1.3 million per month until the Karegnondi Water Authority is completed next summer.

"It's heartening to know so many people are working at so many levels to bring safe, clean water back to Flint," Mott Foundation President Ridgway White said. "We believe this transitional solution is the right and necessary thing to do, and we're glad we could help the state and the city make it happen."

The move to Detroit water, which is expected to carry, carries many public health benefits. As large bodies of water, the Great Lakes are naturally prone to fewer problems from large rain events and other runoff issues that can sometimes be present in shallower rivers. Additionally, the Great Lakes Water Authority water already has additional corrosion control, using phosphates to help coat the insides of pipes and limit lead from leaching into the water.

However, reconnecting with the authority will not completely resolve the city's problem with lead service lines or aging infrastructure. It will take time for pipes in Flint to become coated with the phosphate corrosion control. Additionally, some households in the city could experience lead in their drinking water until all lead pipes and plumbing are replaced.

"Reconnecting to Detroit is the fastest way to deliver clean, safe water to Flint and stabilize the infrastructure system," Flint Mayor Dayne Walling said. "I appreciate the state, the Mott Foundation, Detroit, and the county's participation in a solution for Flint's water problems. The health and safety of Flint's families, children and seniors is my top priority, and reconnecting to Detroit is a major step that the city could not take alone given budget constraints."

To best protect public health, Snyder said state and local authorities will continue to carry out steps outlined on Oct. 2 in a comprehensive action plan, including continued testing, the use of faucet filters and providing residents with accurate information about steps to eliminate lead exposure. The Michigan Departments of Environmental Quality and Health and Human Services today also committed an additional $3.5 million for water filters, free lead testing through the state laboratory for Flint water customers, and hiring additional staff to conduct health exposure monitoring for lead in drinking water.

Free filters are available for current MDHHS clients at the 125 E. Union St. or 4809 Clio Road MDHHS office locations. Hi Sara and Dave

Is the governor asking for a total of $6 million from the Legislature (for water switch) or $10 million (plus other action plan costs)? I was a little confused by descriptions in press conference and release.

Cc: Lyon, Nick (DHHS)
Subject: Update from Nick's calls

Nick has put in calls to our subcommittee chairs and wanted to pass along the feedback he got.

All agree from the health side that the DHHS action is the right way to move forward. However they had some negative feedback on the $6 million.

--Representatives MacGregor and Poleski both feel this should be a loan to the City of Flint instead of direct payment of $6 million

--Senator Marleau complained about the lack of legislative input before the decision was made to switch back to Flint water from Detroit in the first place.

He left messages for Verheulen, Santana, Shirkey and Hertel.

Subject: Re: Kildee's statement
Attachments: image001.jpg

Kildee should also ask for federal assistance, I thought that was one of the reasons why Flint voters sent him to DC. SMH

On Oct 8, 2015, at 2:16 PM, Murray, David (GOV) <MurrayD1@michigan.gov> wrote:

October 8, 2015

Congressman Dan Kildee (MI-05) issued the following statement today after Governor Snyder announced that the city of Flint would reconnect to the Detroit water system:

"Reconnecting to the Detroit water system is the right next step to provide Flint residents with safe drinking water. But how Flint pays for safe water until the Karegnondi Water Authority is operational is a separate question.

"Flint is a financially distressed city, and it should not have to empty out its bank account to pay for the state's failures. The decision to switch to the Flint River water source was made while the city was under state emergency management, and now it is incumbent on Governor Snyder and the state to fix – and pay – for the problem they created.

"Flint paying anything for the problem that the state created in the first place means that other improvements, including to the city's aging water infrastructure system, could be delayed. This is especially troublesome considering that the state of Michigan has consistently cut tens of millions of dollars of revenue sharing to the city of Flint in recent years.

"Flint residents are also Michigan residents, who pay state taxes and, like every other city in our state, expect clean and safe drinking water. The state of Michigan created this problem, and they need to pay for the solution to fix it."

Subject: RE: What do you need?

I left a voicemail.
I'm working on a story about how the state determined there was an issue with lead in Flint water.
The director spoke to the timeline yesterday (first 100 tests showing the 6ppb reading, the start of a second round of testing that ended up coming back 11 ppb, the notice to the city in august about corrosion control).
My question is pretty simple. Why didn't something more happen at the first sign of elevation (end of 2014 when tests showed just a slightly elevated level at 6 ppb)?
I have notes from the director talking yesterday about following the protocol of testing again per epa rules, but I didn't know if there was any other action, heads-up to the city or internal discussion about what might be happening by the state.
I also know 6bbp is well within the 15 ppb threshold, but it's a question I've been hearing. Just want to make sure I've got the whole answer from your end.
Thanks,

Subject: Fw: Media Call: Ron Fonger - Flint Journal (Deadline ASAP)-D. Earley Response

All,

Mr. Earley asked me to share with you his response to the below media inquiry. It was as follows:

"The decision to separate from DWSD and go with the Karegnondi Water Authority, including the decision to pump Flint river water in the interim, were both a part of a long-term plan that was approved by Flint's Mayor, and confirmed by a City Council vote of 7-1 in March of 2013 - a full seven months before I began my term as Emergency Manager. That vote was supported and signed into emergency order by then Emergency Manager Edward Kurtz on March 29, 2013. It was my responsibility to implement the previously accepted and approved plan as the contract with DWSD expired in April 2014 during my term as EM. It did not fall to me to second guess or to invalidate the actions that were taken prior to my appointment. An even bigger concern that everyone should be focused on moving forward is what is done in the long-term to replace the crumbling water distribution system that exits throughout Flint and Genesee County."

Please let him know if you have any questions.

Thanks.

Please see below.

We're going to address by noting that this move to was something that community had supported as well, that we know Darnell cares deeply about kids and the residents he serves, but that primarily we're focused on future and all the steps we are taking in collaboration with all parties to ensure that Flint has safe drinking water and we're protecting public health, and that we will be conducting a full after action review.

Let me know ASAP if anyone has any concerns with that or other tweaks/ideas, otherwise, that's what we're going with.

Thanks and best,
SW

MDP Statement: Those Responsible for Flint Water Crisis Must Be Held Accountable

LANSING – The Michigan Democratic Party issued the following statement today, on behalf of Party Chair Brandon Dillon, demanding those responsible for the Flint water crisis be held accountable and calling on Governor Snyder to immediately fire former Flint EM, and current EM for Detroit Public Schools, Darnell Earley:

"Accountability in government means answering to the people you serve, not just cleaning up your mistakes using their money," said Brandon Dillon, Chair of the Michigan Democratic Party.

"This catastrophe began with the governor's appointed emergency manager, and as much as Governor Snyder would like to pretend, this is not a matter of negotiating at the boardroom table. This is a situation where you pay for your mistakes and put those responsible on the chopping block.

"That is why we are calling for the immediate firing of the governor's handpicked emergency manager for Flint, Darnell Earley. Earley was in charge when the decision was made to switch the city to unsafe drinking water. If poisoning children wasn't bad enough, after Earley failed the citizens of Flint, the governor inexplicably rewarded him with another appointment – emergency manager for Detroit Public Schools – where he is now responsible for the education of nearly 50,000 students.

"The children of Flint and Detroit are being robbed of what most of us take for granted – safe drinking water and a quality education. The wholesale theft of our children's futures must end now. That begins with the removal from power all those that would sacrifice the future of a single child in Michigan – let alone thousands – in order to add a few extra dollars to the bottom line."

LANSING – The Michigan Democratic Party issued the following statement today, on behalf of Party Chair Brandon Dillon, demanding those responsible for the Flint water crisis be held accountable and calling on Governor Snyder to immediately fire former Flint EM, and current EM for Detroit Public Schools, Darnell Earley:

"Accountability in government means answering to the people you serve, not just cleaning up your mistakes using their money," said Brandon Dillon, Chair of the Michigan Democratic Party.

"This catastrophe began with the governor's appointed emergency manager, and as much as Governor Snyder would like to pretend, this is not a matter of negotiating at the boardroom table. This is a situation where you pay for your mistakes and put those responsible on the chopping block.

"That is why we are calling for the immediate firing of the governor's handpicked emergency manager for Flint, Darnell Earley. Earley was in charge when the decision was made to switch the city to unsafe drinking water. If poisoning children wasn't bad enough, after Earley failed the citizens of Flint, the governor inexplicably rewarded him with another appointment – emergency manager for Detroit Public Schools – where he is now responsible for the education of nearly 50,000 students.

"The children of Flint and Detroit are being robbed of what most of us take for granted – safe drinking water and a quality education. The wholesale theft of our children's futures must end now. That begins with the removal from power all those that would sacrifice the future of a single child in Michigan – let alone thousands – in order to add a few extra dollars to the bottom line."

Sara…

Let me know if you might have 15-20 minutes this am, for me to walk over and share some information & thoughts or otherwise discuss the response to Egan.

The Flint RTAB meets at 2pm today…so I am leaving for Flint by 1. The RTAB is taking up the city's resolution to pay $2 m for the reconnect to DWSD.

Thanks, T

Gov. Rick Snyder signs bill authorizing funding for Flint to move back to Detroit water system

LANSING, Mich. – Gov. Rick Snyder has signed legislation that will direct funding to the City of Flint's emergency water services to reconnect the city's water supply to the Great Lakes Water Authority.

"The signing of this funding bill is the resolution of a serious problem and I'm pleased so many parties came together to help deliver safe drinking water to the city of Flint," Snyder said. "Reconnecting to the Great Lakes Water Authority is only the first step, as the state will continue testing and inspections to ensure Flint families and children have clean water in their homes and schools."

House Bill 4102, sponsored by state Rep. Al Pscholka, authorizes $6 million to move the city back to Detroit's water system.

In addition to the $6 million:

- $300,000 goes to the Department of Environmental Quality's (DEQ) drinking water and environmental health services;
- $1 million will provide for DEQ to test water samples throughout the reconnection process;
- $1 million allows the Department of Health and Human Services to purchase and distribute water filters to Flint residents;
- $850,000 will aid in follow-up services for children, including lead testing and care for those with abnormal levels;
- $200,000 will fund state plumbing inspections for schools and health facilities.
- The City of Flint city government will provide $2 million toward reconnecting the water supply and the Charles Stewart Mott Foundation has committed $4 million.

The bill was approved unanimously in both the House and Senate and is now Public Act 143 of 2015.

For more information on this and other legislation, please visit www.legislature.mi.gov.

Gov. Rick Snyder signs bill authorizing funding for Flint to move back to Detroit water system

Temporary reconnection provides best protection for public health

LANSING, Mich. – Gov. Rick Snyder has signed bipartisan legislation that will direct funding to the City of Flint's emergency water services to reconnect the city's water supply to the Great Lakes Water Authority until the Karegnondi Water Authority pipeline is completed.

"The signing of this funding bill is the resolution of a serious problem and I'm pleased so many parties came together to help deliver safe drinking water to the city of Flint," Snyder said. "Reconnecting to the Great Lakes Water Authority is only the first step, as the state will continue testing and inspections to ensure Flint families and children have clean water in their homes and schools."

House Bill 4102, sponsored by state Rep. Al Pscholka, authorizes $6 million to move the city back to Detroit's water system until the new pipeline is finished.

In addition to the $6 million:

- $300,000 goes to the Department of Environmental Quality's drinking water and environmental health services;
- $1 million will provide for DEQ to test water samples throughout the reconnection process;
- $1 million allows the Department of Health and Human Services to purchase and distribute water filters to Flint residents;
- $850,000 will aid in follow-up services for children, including lead testing and care for those with abnormal levels;
- $200,000 will fund state plumbing inspections for schools and health facilities.
- The City of Flint city government will provide $2 million toward reconnecting the water supply and the Charles Stewart Mott Foundation has committed $4 million.

The bill was approved unanimously in both the House and Senate and is now Public Act 143 of 2015.

Hi, Anna. Quick observation on this line:
"The signing of this funding bill is the resolution of a serious problem and I'm pleased so many parties came together to help deliver safe drinking water to the city of Flint,"

I would suggest the word "resolution" not be employed there. Maybe the signing of the bill "begins to address", or maybe "allows us to respond" to the serious problem.

Hello,

ABC12 is in Lansing today and wanted to be in the loop on getting information when the Governor signs the Flint Water Fix Bill.

I also wanted to ask- the money approved is intended to tie the city over until KWA is up and running which we heard is expected to be June of 2016- what if KWA is not ready? Would Flint continue to stay on Detroit water system- if so, who/how would that bill be paid? Or would city be forced back onto River Water?

Thanks,
Damon

Importance: High

Brad,

After reviewing the emails made available through FOIA, there are several things that seem to need addressing.

1. It appears DEQ staffers have essentially downplayed or ignored warning signs from EPA's water expert, Miguel Deltoral. We have been aware of Mr. Deltoral's unofficial memo that went public in April. But his email dated two months earlier on Feb. 27, to Jennifer Crooks and Mike Prysby, he seems to lay out exactly what's come to pass...

"(Particulate lead readings) Folks tend to discount these values as anomalies, but particulate lead release is a normal part of the corrosion process and it is universal (common) in all systems. It's just that it's not captured as often by the infrequent LCR sampling. If systems are pre-flushing the tap the night before collecting LCR compliance samples (MDEQ) still provides these instructions to public water systems) this clears particulate lead out of the plumbing and biases the results low by eliminating the highest lead values. If systems are pre-flushing and still finding particulate lead, the amount of particulate lead in the system can be higher than what is being detected using these "pre-flushed" first-draw samples.

"My point on that was that people are exposed to the particulate lead on a daily basis, but the particulate lead is being flushed away before collecting compliance samples which provides false assurance to residents about the true lead levels in the water."

Miguel goes on to address the optimal corrosion control situation in that same Feb 27 email.

"If I remember correctly, Detroit is feeding (phosphate) for the lead/copper rule, but since Flint is no longer part of that interconnection, I was wondering what their OCCT was. They are required to have OCCT in place which is why I was asking what they were using."

So what I'm seeing here is Miguel having raised these issues as far back as February. When unofficial April memo shows up, it's clear these issues still haven't been addressed.

Another email from the day before came from Jennifer Crooks at EPA which also highlights early concern about a lack of proper corrosion controls as well as the testing methods.
"The City can't just flush in advance of taking the compliance samples, they have to flush the lines on a regular basis."

Can you respond to the fact that it appears the state ignored or disregarded several warnings from EPA officials about testing deficiencies and insufficient corrosion controls?

Emails offer snapshots of a much broader conversation. The program staff did not ignore the information. They believed they were handling the situation in full accordance with federal protocols, and contacted EPA Region 5 officials promptly to seek guidance. They were more than halfway done with compliance sampling under the federal protocol and the 90^{th} percentile samples to that point showed 6 pbb – barely in excess of the 5 pbb threshold.

2. Corrosion control, or the lack thereof, seems to be another major problem here. At the first of the recent press conferences, Dan Wyant said that lime was being used as a corrosion control method. But that is clearly contradicted by DEQ staff at several points. One of those is Pat Cook's email from April 24.
"Flint is currently not practicing corrosion control treatment at the (water treatment plant)."
This puts Dan's comments about the lime into question.
There's been some confusion on this point, and I think it was addressed in our previous response. This was a misunderstanding with technical staff. Lime was added to soften the water. While it adjusts pH and can have some impact on corrosivity, it was insufficient corrosion control.

3. I gather from several exchanges in here that EPA and DEQ disagree over that the state's responsibility was in ensuring there was optimal corrosion control. One of the emails from July includes notes from a meeting of all the parties shows that EPA was asking why that hadn't been used from the outset, and the state's response was something along these lines:

""MDEQ explained that they did not treat the switch to Flint River water as a "new system," but as a new source. It is their understanding that two rounds of 6-month testing is still needed to characterize the water quality. They don't know what optimized is until those two rounds of six month monitoring are completed."

Under the lead copper rule, was the state required to have phosphate treatment in place? It appears here that the state chose to interpret the CLR as not requiring corrosion control. That seems like a highly dubious conclusion.

And after concerns were raised repeatedly beginning (at least as early as February), why was nothing done?

That's the big question. What has become clear in recent weeks is that staff believed they were handling the situation in accordance with the proper protocol for a water provider using a new source, but the federal Lead and Copper rule has a particular provision for communities over 50,000 people; that the system operator must continue treating with full corrosion control even as they test the water.

What the staff did would have been the proper protocol for a community under 50,000 people. None of the DEQ staff in this division had ever worked on a water source switch for a community over 50,000 people – it's uncommon for our big communities to switch sources.

It's increasingly clear there was confusion here, but it also is increasingly clear that DEQ staff believed they were using the proper federal protocol and they were not.

The Governor will soon announce an independent, third party, after-action review to detail what happened and why, and offer steps to make sure Michigan's drinking water program is on a better course in the future.

4. Another area of concern, one I mentioned on the phone, is the pace of response. And I understand that the lead copper rule lays out response times. But you have concerns being raised about lead by an EPA expert as far back as February. The state's response, in several instances, is that federal guidelines give us two six-month periods to collect samples, and then more time to submit an action plan, and then a year or more to enact that plan.

   While those delays in making a change may be permitted under the law, given that we're talking about a possible public health crisis, why wasn't there more expediency? The responses in these

emails appear to be without any sense of urgency at a time when Flint residents may have been drinking dangerous water.

The results of two rounds of water testing showed the city needed to move to optimizing its corrosion control. That order was issued Aug. 17.

5. At many points along the way, serious concerns are made about the state's testing methods. The Virginia Tech results were not the first time someone had indicated state testing – as approved by federal guidelines – might not be giving accurate readings.

> Miguel's April memo reads: "I wanted to follow up on this because Flint has essentially not been using any corrosion control treatment since April 30, 2014 and they have (lead service lines). Given the very high lead levels found at one home and the pre-flushing happening in Flint, I'm worried that the whole town may have much higher lead levels than the compliance results indicated, since they are using pre-flushing ahead of their compliance sampling."

There is substantial controversy over the lead and copper rule – the EPA has been working for years on ways to update it, and Michigan will be an active part of that conversation going forward. The situation in Flint is a snapshot of an issue affecting cities around the state and the nation. More than a dozen states use the sampling protocol Michigan uses – that's not a defense of the protocol, but rather an indication that even experts on the issue disagree about the most effective testing methods.

What everyone can agree on is that lead is a serious issue. And I think everyone can agree that when the state came to recognize that there could be a health threat in the city, we took action fast. We are now engaged in an unprecedented effort to protect kids and families in Flint, develop more knowledge about what has happened and how people were affected, and take steps to make sure it doesn't happen again – in Michigan, or anywhere else.

All the people who brought this issue forward deserve credit for bringing it to us. Our actions reflected inexperience, and our public response to criticism was the wrong tone early in this conversation. But the best we can do with the situation going forward is represented in our present course – the Governor's plan represents all the suggestions outlined in the draft EPA memo, the Virginia Tech report, and the guidance we've gotten from EPA.

We will learn from this. We will make necessary changes to see to it that our program becomes a national leader in protection.

DEQ Director Dan Wyant today made the following statement as he announced DEQ Chief Deputy Jim Sygo will immediately assume the role of interim chief of the department's Office of Drinking Water and Municipal Assistance:

"It recently has become clear that our drinking water program staff made a mistake while working with the City of Flint. Simply stated, staff employed a federal protocol they believed was appropriate, and it was not. The water testing steps followed would have been correct for a city less than 50,000 people, but not for a city of nearly 100,000.

As details of the situation emerge, I am convinced our program staff believed they were doing their job right. As the state recognized there could be a health threat to Flint residents, we took appropriate steps. We are now embarked on an unprecedented effort to safeguard Flint residents and families with near-term, intermediate and long-term actions to protect and educate city residents.

The issue in DEQ is experience and protocol with respect to corrosion control. The Governor has called for an independent, third-party after-action review. I have taken the step of changing leadership in the division. We are working with our federal partners and committed to being part of the U.S. EPA's effort to strengthen its Lead and Copper rule.

All who brought this issue to the department deserve credit for bringing it forward. Lead is a serious issue, particularly for young people, and we take it seriously. The Governor's plan incorporates the suggestions outlined by the EPA and researchers at Virginia Tech.

We will learn from this. We will make necessary changes to see to it that our program becomes a national leader in public health protection."

KEY MESSAGES:

1. It is increasingly clear through internal review at DEQ that staff overseeing drinking water mistakenly applied the wrong federal protocol when the city of Flint switched to the Flint River.

2. Today's announcement of new leadership in that division aligns with the states goal: make sure the public health is protected in Flint and elsewhere in the state, and ensure we learn from this so it never happens again.

3. The governor's action plan continues to protect kids and families in Flint, with the switch back to Detroit water last week, free water filtration for all city residents, and inspection of all Flint schools for lead exposure.

4. Flint families who are concerned are encouraged to take advantage of free home water testing through the city and blood lead level testing for children.

Subject: PROPOSED flint journal response.

The DEQ felt it important to acknowledge its responsibility for misinterpreting a federal protocol. We believe it is a critical step to rebuilding trust and confidence in the community.

That recognition is coupled with our demonstrated commitment to actions – near-term and long-term, to do what is necessary to ensure city residents have safe drinking water.

The Governor's after-action review is expected to bring more clarity and provide more answers on what has already happened. The DEQ is now focused on helping implement the Governor's plan – an unprecedented effort to bring resources to protecting the community and addressing lead concerns.

Subject: PRESS RELEASE: Mayor Dayne Walling Response to MDEQ's Admission of Fault in Flint's Water Emergency

For Immediate Release

Mayor Dayne Walling Response to MDEQ's Admission of Fault in Flint's Water Emergency

Flint, Michigan – October 19, 2015 – The following is a response from Mayor Dayne Walling regarding the MDEQ's statement admitting fault in the Flint water emergency:

Today, the Michigan Department of Environmental Quality (MDEQ) acknowledges its leading role in the decision-making that led to the contamination of Flint's drinking water. The people of Flint hear this admission and we demand that the State fully fix this problem they caused. While the State taking responsibility and the switch to Detroit water are steps in the right direction for Flint, actions speak louder than words. Now, the Governor and the State need to provide tens of millions of dollars to fix Flint's water and infrastructure as well as to provide for the families, children and schools affected. I will continue to push for changes and advocate for our City until every drop of water is 100% safe.

The MDEQ assured Flint that the switch was being handled safely and responsibly. We relied on the information from MDEQ, and clearly that information was wrong. My heart goes out to the children and families who are affected by this issue.

This morning our local Senator Jim Ananich said the following: "We do not know whether the misapplication of federal rules was intentional or due to negligence. That's why the Legislature needs to have a robust role in any investigation, and in ensuring those responsible for Flint's water crisis are held accountable." I applaud Senator Ananich's Statement and I urge the Governor and State Officials to take the necessary steps to ensure accountability so that this never happens again to any community.

All,

Darnell Earley asked that I send you the draft of an OpEd regarding the Flint Water issue that he would like to send to the media this week.

He is seeking your input before sending, and is looking for any feedback you might have by tomorrow afternoon. He has intentionally placed it on his EM letterhead as he is still acting in the capacity of an EM.

Thank you.

Op/Ed Re: Changes to Flint Water System Made By Local Leaders, Not EM ***DRAFT***
Author: Darnell Earley, ICMA-CM, MPA

It is critically important that the record be set straight about the decision-making and approval processes that led to Flint joining the Karegnondi Water Authority (KWA) with the use of Flint River water as the interim water supply. Contrary to reports in the media and rhetoric being espoused by individuals, the decision was made at the local level, by local civic leaders.

The fact of the matter is that the decision to separate from Detroit Water and Sewerage Department and go with the KWA, which included the decision to pump Flint River water in the interim, were both a part of a long-term plan that was approved by Flint's Mayor, and confirmed by a City Council vote of 7-1 on March 25, 2013. This plan was presented to me when I was appointed as Flint Emergency Manager - a full seven months after City Council's affirmative vote.

Genesse County Drain Commissioner Jeff Wright also made the affirmative vote by the City Council a necessary condition of joining the KAW, and applauded the decision in a March 26, 2013 news release, saying, "…I have said from the beginning that this decision must be made by Flint's City Council and Mayor…I am glad that the residents of Flint were able to have their voices heard via their elected officials."

The Mayor's approval of the plan, and the subsequent near unanimous vote by City Council were in no way coerced, forced or demanded by the State, nor any Emergency Manager. Council's affirmative vote was supported and officially signed into emergency order by then Emergency Manager Edward Kurtz on March 29, 2013. A subsequent order Kurtz signed on June 26, 2013, speaks specifically to the, "… upgrading of the Flint Water Plant to ready it to treat water from the Flint River to serve as the primary drinking water source for approximately two years and then converting to KWA delivered lake water."

When I began my term as Emergency Manager in October 2013, it fell to me to oversee the implementation of the previously accepted and approved plans, as the contract with DWSD expired in April 2014. It did not fall to me to question, second guess or to invalidate the actions that were taken prior to my appointment.

At the time the decision was made there was no way to predict such an unfortunate outcome. I would also offer that had local leaders known then what they know now, parts of their decision may have been entirely different. What the City of Flint and the State of Michigan are now dealing with is the management of an unintended consequence resulting in a negative outcome from an otherwise sound public policy decision. There is no "blame" to affix for that.

As the solutions are put into place to address the serious concerns at hand, I believe that everyone's attention should turn toward another serious concern -- what is being done in the long-term to replace the aged and

crumbling water distribution systems that exits throughout Flint and Genesee County, which was a major contributing factor to this serious issue in the first place.

I am a strong believer that the truth supported by fact, speaks for itself. This was a local decision that was made by local civic leaders. Anyone who says otherwise is being disingenuous for whatever reason. In the words of Mahatma Ghandi, *"Truth never damages a cause that is just."*

All,

Darnell Earley asked that I send you the draft of an OpEd regarding the Flint Water issue that he would like to send to the media this week.

He is seeking your input before sending, and is looking for any feedback you might have by tomorrow afternoon. He has intentionally placed it on his EM letterhead as he is still acting in the capacity of an EM.

Thank you.

Sara and Dave,

Good morning (still). Thanks for your help in tightening up the DPS alert yesterday.

Would you guys mind providing a response to this and also the Dems calling for Wyant to step down yesterday? Gov. Snyder holds the power to make this decision, so I'd like to know if he would consider doing this as the state evaluates how it handled the Flint water situation. Thank you.

Progress Michigan: MDEQ's Wyant Needs to Go

The Flint water crisis shows a lack of leadership at the MDEQ

LANSING — In the wake of the Flint water crisis, where children across the city were poisoned with high levels of lead in the drinking water, Progress Michigan is calling for the ouster of the head of the Michigan

Department of Environmental Quality, Dan Wyant.

Recent reports show that Wyant and the MDEQ were warned by the Environmental Protection Agency as early as February that lead was leaching into the water pipes in Flint due to the corrosive nature of the Flint River water. Gov. Rick Snyder's emergency manager made the switch from Detroit water to Flint River water.

"You can't simply reshuffle some staff at the department to make up for poisoning thousands of Flint children. When families and kids are told their drinking water is safe and it's actually filled with toxins, someone needs to be held accountable. It starts at the top with Wyant," **said Lonnie Scott, executive director of Progress Michigan.** "He needs to resign immediately or Gov. Snyder needs to quickly show him the door. This crisis was allowed to fester and grow under his watch and Wyant needs to go. Families in Flint deserve to know that Gov. Snyder is taking this problem seriously and is willing to take serious action."

To: Murray, David (GOV); Wurfel, Sara (GOV)
Subject: Proposed response: FW: RELEASE: Progress Michigan: MDEQ's Wyant Needs to Go

Dan's response has been essentially this:

"The Governor will decide. He has called for an independent, third-party After Action Review. That group will review local decision, the water plant operation, DEQ's actions and the EPA's role, and offer its findings and recommendations to the Governor. He will do the right thing."

Never mind, you can stand down on this. We're going to write a story about Ananich wanting Senate Oversight to look into Wyant/DEQ. I don't have the audio yet to give you specific details, but if you want to comment on that prospect that would also work for me.

Per Tom, you may also want to more directly note that DWSD **terminated** the contract with Flint, rather than to say "as the contract with DWSD expired in April 2014…" in the 5th paragraph.

Gov. Rick Snyder announces Flint Water Task Force to review state, federal and municipal actions, offer recommendations

Experts in public health, water management, environmental protection to focus on steps to protect residents

LANSING, Mich. – Gov. Rick Snyder today announced the creation of an independent advisory task force charged with reviewing actions regarding water use and testing in Flint and offer recommendations for future guidelines to protect the health and safety of all state residents.

Task force members include experts in public health and medicine, water management, and environmental protection from both sides of the aisle, and will be co-chaired by Ken Sikkema of Public Sector Consultants and Chris Kolb, of the Michigan Environmental Council. Also serving will be Dr. Matthew Davis of the University of Michigan Health System, Eric Rothstein, of the Galardi Rothstein Group and Dr. Lawrence Reynolds of Mott Children's Health Center in Flint.

"Transitioning back to the Detroit Water and Sewerage Department-Great Lakes Water Authority is a good first step to protecting public health in Flint, but it's not the last step," Snyder said. "Bringing in outside experts to evaluate our

actions and help monitor and advise on potential changes to law, procedures and practices will be key to continuing work on the comprehensive action plan and ensuring safe drinking water for all the residents in Flint and all of Michigan."

Snyder said the administration will fully cooperate with task force members, saying he wants an unbiased report focusing on steps taken in the past and recommendations that could improve practices to ensure all residents have access to safe, clean water.

Ken Sikkema is a senior policy fellow at Public Sector Consultants, where he specializes in public finance, environment, and energy policy. Prior to joining the firm, Sikkema served in both the Michigan House and Senate, culminating with four years as Senate majority leader. He has also served as both an adjunct and visiting professor at Grand Valley State University.

Chris Kolb is president of the Michigan Environmental Council, a statewide coalition of 70 environmental, public health and faith-based nonprofit groups. Before joining the MEC, Kolb represented Ann Arbor in the state House for six years and served six years on the Ann Arbor City Council. He has been president of the MEC for six years.

Matthew Davis, M.D., M.A.P.P., is professor of pediatrics and internal medicine at the University of Michigan Health System and professor of public policy at the Gerald R. Ford School at the University of Michigan, having joined the faculty in 2000. Davis also is a professor of health management and policy at the School of Public Health. He previously served as the chief medical executive of the Michigan Department of Community Health/Department of Health and Human Services.

Eric Rothstein is a national water issues consultant and principal at the Galardi Rothstein Group. He served as an independent advisor on the creation of the Great Lakes Water Authority. Rothstein also has served as Jefferson County, Alabama's rate consultant and municipal adviser for litigation related to the county's bankruptcy and issuance of $1.7 billion in sewer warrants and led strategic financial planning for the City of Atlanta's Department of Watershed Management. He has more than 30 years of experience in water, wastewater and stormwater utility finance and rate-making assessments.

Lawrence Reynolds, M.D., is a pediatrician in Flint who serves as president of the Mott Children's Health Center. He received his medical degree from Howard University College of Medicine and has been in practice for 36 years. He has served as president of the Genesee County Medical Society and the Michigan Chapter of the American Academy of Pediatrics. He has been honored for his humanitarian and advocacy efforts on behalf of children from the Community Foundation of Greater Flint.

Snyder has said reconnecting with the authority is a critical step to resolving water quality issues and addressing related health concerns. It will not immediately resolve the city's problem with lead service lines or aging infrastructure. It will take time for pipes in Flint to become coated with the phosphate corrosion control.

To best protect public health, state and local authorities will continue to carry out steps outlined on Oct. 2 in a comprehensive action plan, including continued testing, the use of faucet filters and providing residents with accurate information about steps to eliminate lead exposure. The Michigan Departments of Environmental Quality and Health and Human Services are continuing to provide free water filters, free lead testing through the state laboratory for Flint water customers, and hiring additional staff to conduct health exposure monitoring for lead in drinking water.

(DRAFT)
FLINT WATER ADVISORY TASK FORCE
AFTER-ACTION REVIEW

The Flint Water Task Force is an independent advisory panel appointed by Governor Rick Snyder charged with reviewing actions regarding water use and testing in Flint and with offering recommendations for future guidelines to protect the health and safety of all state residents.

The task force expects to summarize its work in a report to be presented to Governor Rick Snyder within ninety (90) days.

GOALS

The Flint Water Task Force's goals are as follows:

- Complete a thorough review of all steps taken by state and local officials regarding the decision to switch the City of Flint's water source to the Flint River from the Detroit Water and Sewerage Department's system (DWSD).
  - Produce a timeline of actions
  - Establish why each action was taken

- Review the roles of the federal, state, and local officials in the decision-making process
  - Identify best practices for federal, state, and local officials to work together in future similar situations
  - Evaluate where coordination between these entities could have been better, and how it could be improved

- Review federal, state, and local actions and protocols
  - Determine whether the proper procedures were followed
  - Identify which procedures should be changed

- Monitor and review the process, procedures, and protocols being followed as the City of Flint returns to the DWSD system
  - Ensure that proper corrosion controls and testing are in place
  - Highlight the appropriate actions that the City of Flint should follow when the future switch is made to the Karegnondi Water Authority's system

- Assess future practices
  - Highlight practices that should change for communities in similar situations
  - Recommend changes in law, procedure, or practice to ensure all Michiganders are drinking safe water

Karen Tommasulo
Public Information Officer
Michigan Department of Environmental Quality
PPI
tommasulok@michigan.gov

After-Action Review Q&A

Is the Flint Water Advisory Task Force independent? They were appointed by the Governor.

None of the task force members are city, state or federal employees, and none have been previously involved in the drinking water situation in Flint. They bring diverse expertise in pediatrics and internal medicine, environmental protection, water and wastewater asset management, and environmental policy. We are pleased to have their participation.

What is the task force's scope and mission?

The Flint Water Advisory Task Force will look at the procedures and protocols used by the City of Flint, the Michigan DEQ and the U.S. EPA during and after its switch to using the Flint River as its source of drinking water. The group will also review whether the present procedures, protocols, statutes, policies and rules that govern drinking water systems are enough to protect the public health of Michigan residents.

Will the Flint Water Advisory Task Force look at corrosion control and the Lead and Copper Rule?

Yes. If necessary, the Flint Water Advisory Task Force could include proposed amendments to the Lead and Copper Rule or other protocols regulating corrosion control in its final report to the Governor.

What types of information will the task force look at to make its determinations?

The Flint Water Advisory Task Force will have any and all information at its disposal, including reports, emails, permits and any other documents needed.

Will the task force be empowered to fire anyone, or is that a recommendation they can make?

The task force's after-action review is focused on proactive recommendations to prevent future problems with lead in drinking water and to better protect public health statewide. They will offer a comprehensive set of recommendations they deem appropriate to the situation.

Is the panel made up of drinking water or lead experts?

The panel includes four members with diverse expertise in water and medicine. Their areas of specialty include pediatrics and internal medicine, environmental protection, water and wastewater asset management, and environmental policy, and we are pleased to bring their experience to the issue.

How long is the after-action review going to take?

The Flint Water Advisory Task Force will summarize its work in a report to be presented to the Governor within 90 days.

So will the results and the report to the Governor be made public?
The full report will be made public.

How does this help the people of Flint?
The after-action review is designed specifically to ensure the state learns from the experience in Flint and can better protect public health going forward. In the meantime, the city has reconnected to the Great Lakes Water Authority, and residents are encouraged to continue to use water filters and other protective measures to ensure safe drinking water while the long-term fixes of connecting to the Karegnondi Water Authority and replacing outdated local lead infrastructure is completed.

Gov. Rick Snyder announces Flint Water Task Force to review state, federal and municipal actions, offer recommendations

Experts in public health, water management, environmental protection to focus on steps to protect residents

LANSING, Mich. – Gov. Rick Snyder today announced the creation of an independent advisory task force charged with reviewing actions regarding water use and testing in Flint and offer recommendations for future guidelines to protect the health and safety of all state residents.

Task force members include experts in public health and medicine, water management, and environmental protection from both sides of the aisle, and will be co-chaired by Ken Sikkema of Public Sector Consultants and Chris Kolb, of the Michigan Environmental Council. Also serving will be Dr. Matthew Davis of the University of Michigan Health System, Eric Rothstein, of the Galardi Rothstein Group and Dr. Lawrence Reynolds of Mott Children's Health Center in Flint.

"Transitioning back to the Detroit Water and Sewerage Department-Great Lakes Water Authority is a good first step to protecting public health in Flint, but it's not the last step," Snyder said. "Bringing in outside experts to evaluate our actions and help monitor and advise on potential changes to law, procedures and practices will be key to continuing work on the comprehensive action plan and ensuring safe drinking water for all the residents in Flint and all of Michigan."

Snyder said the administration will fully cooperate with task force members, saying he wants an unbiased report focusing on steps taken in the past and recommendations that could improve practices to ensure all residents have access to safe, clean water.

Ken Sikkema is a senior policy fellow at Public Sector Consultants, where he specializes in public finance, environment, and energy policy. Prior to joining the firm, Sikkema served in both the Michigan House and Senate, culminating with four years as Senate majority leader. He has also served as both an adjunct and visiting professor at Grand Valley State University.

Chris Kolb is president of the Michigan Environmental Council, a statewide coalition of 70 environmental, public health and faith-based nonprofit groups. Before joining the MEC, Kolb represented Ann Arbor in the state House for six years and served six years on the Ann Arbor City Council. He has been president of the MEC for six years.

Matthew Davis, M.D., M.A.P.P., is professor of pediatrics and internal medicine at the University of Michigan Health System and professor of public policy at the Gerald R. Ford School at the University of Michigan, having joined the faculty in 2000. Davis also is a professor of health management and policy at the School of Public Health. He previously served as the chief medical executive of the Michigan Department of Community Health/Department of Health and Human Services.

Eric Rothstein is a national water issues consultant and principal at the Galardi Rothstein Group. He served as an independent advisor on the creation of the Great Lakes Water Authority. Rothstein also has served as Jefferson County, Alabama's rate consultant and municipal adviser for litigation related to the county's bankruptcy and issuance of $1.7 billion in sewer warrants and led strategic financial planning for the City of Atlanta's Department of Watershed Management. He has more than 30 years of experience in water, wastewater and stormwater utility finance and rate-making assessments.

Lawrence Reynolds, M.D., is a pediatrician in Flint who serves as president of the Mott Children's Health Center. He received his medical degree from Howard University College of Medicine and has been in practice for 36 years. He has served as president of the Genesee County Medical Society and the Michigan Chapter of the American Academy of Pediatrics. He has been honored for his humanitarian and advocacy efforts on behalf of children from the Community Foundation of Greater Flint.

Snyder has said reconnecting with the authority is a critical step to resolving water quality issues and addressing related health concerns. It will not immediately resolve the city's problem with lead service lines or aging infrastructure. It will take time for pipes in Flint to become coated with the phosphate corrosion control.

To best protect public health, state and local authorities will continue to carry out steps outlined on Oct. 2 in a comprehensive action plan, including continued testing, the use of faucet filters and providing residents with accurate information about steps to eliminate lead exposure. The Michigan Departments of Environmental Quality and Health and Human Services are continuing to provide free water filters, free lead testing through the state laboratory for Flint water customers, and hiring additional staff to conduct health exposure monitoring for lead in drinking water.

Subject: LARA - Flint

Guys, what's your availability for a quick call to go over the LARA piece in more detail? Below is language that can be used as part of a larger message on the state's efforts.

- On October 16th, LARA and DEQ staff met with Flint Community Schools officials. LARA staff then began a review of building plans and permits in order to assess the building plumbing in all 13 Flint Public School buildings.

- The assessment allows LARA staff to identify plumbing components of concerns and prioritize sample sites within each building.

- On October 23rd, LARA staff will begin to identify of all faucets, taps and outlets that are used regularly by students and staff for drinking and cooking.

- After the sites and order of collection have been determined by LARA staff within a building, state officials can begin to take samples.

Regarding the meeting yesterday with Change Agent Consortium:

"We were not aware of the planned prayer vigil outside our headquarters, but we invited CAC leaders in to discuss their concerns and share information transparently.
We felt it was a positive conversation, and appreciated the chance to brief them on the unprecedented effort being made to protect Flint kids and families.

We also briefed them on the Governor's announced Flint Water Task Force, which will perform an independent review of local, state and federal roles in what has happened in Flint and make recommendations to the governor.

I serve at the pleasure of the Administration. I believe the Governor will gather all the facts and make the right decision at the appropriate time. Until then, we at the DEQ are singularly focused on implementing the state's plan to address lead issues in Flint and protect kids and families there."

Changes to Flint Water System Made By Local Leaders, Not Emergency Managers
Author: Darnell Earley, ICMA-CM, MPA

It is critically important that the record be set straight about the decision-making and approval processes that led to Flint joining the Karegnondi Water Authority (KWA) with the use of Flint River water as the interim water supply. The fact is, that the river has served and been used as the back-up supply for decades, and this was the rationale given to me by staff and Mayor Walling, who also serves as chairperson of the KWA board. Contrary to reports in the media and rhetoric being espoused by individuals, the decision was made at the local level, by local civic leaders.

The decision to separate from Detroit Water and Sewerage Department and go with the KWA, which included the decision to pump Flint River water in the interim, were both a part of a long-term plan that was approved by Flint's Mayor, and confirmed by a City Council vote of 7-1 on March 25, 2013. This plan was presented to me when I was appointed as Flint Emergency Manager in October 2013 - a full seven months after City Council's affirmative vote.

Genesee County Drain Commissioner Jeff Wright also made the affirmative vote by the City Council a necessary condition of joining the KWA, and applauded the decision in a March 26, 2013 news release, saying, "…I have said from the beginning that this decision must be made by Flint's City Council and Mayor…I am glad that the residents of Flint were able to have their voices heard via their elected officials."

The Mayor's approval of the plan, and the subsequent near unanimous vote by City Council were in no way coerced, forced or demanded by the State, nor any Emergency Manager. Council's affirmative vote was supported and officially signed into EM Executive Order by then Emergency Manager Edward Kurtz on March 29, 2013. A subsequent order Kurtz signed on June 26, 2013, speaks specifically to the, "… upgrading of the Flint Water Plant to ready it to treat water from the Flint River to serve as the primary drinking water source for approximately two years and then converting to KWA delivered lake water."

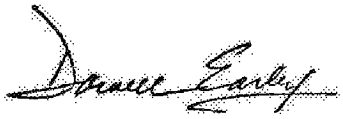
When I began my term as Emergency Manager, it fell to me to oversee the implementation of the previously accepted and approved plans, as the DWSD terminated the contract with Flint in April 2014. It did not fall to me to question, second guess or to invalidate the actions that were taken prior to my appointment.

At the time the decision was made there was no way to predict such an unfortunate outcome. I would also offer that had local leaders known then what they know now, parts of their decision may have been entirely different. What the City of Flint and the State of Michigan are now dealing with is the management of an unintended consequence resulting in a negative outcome from an otherwise sound public policy decision. There is no "blame" to affix on any Emergency Manager for that.

As the solutions are put into place to address the serious concerns at hand, I believe that everyone's attention should now turn toward another serious concern -- what is being done in the long-term to replace the aged and crumbling water distribution systems that exists throughout Flint and Genesee County, which was a major contributing factor to this serious issue in the first place.

I am a strong believer that the truth supported by fact, speaks for itself. This was a local decision that was made by local civic leaders. Anyone who says otherwise is being disingenuous for whatever reason.

Sincerely,



Darnell Earley, ICMA-CM, MPA

Dear ,

The Flint water crisis is a failure of government at every level, and I am committed to increasing transparency and finding answers to ensure that these failures never happen again. That's why I have called for an investigation into the causes of water problems in Flint.

Simply put, high lead levels in Flint's drinking water are unacceptable, and there must be accountability.

As part of my ongoing efforts, I am holding a **telephone town hall with constituents on Wednesday, October 28th, at 7 p.m. ET** to provide an update on my efforts. I'll be joined by both Dr. Mona Hanna-Attisha and Dr. Marc Edwards, who both conducted critical tests that exposed unacceptable lead levels in Flint. On the live call, we will also answer questions from Flint residents.

If you're interested in joining our conversation, please RSVP here, or fill out the form below.

For months, I have been pressing state and federal agencies for immediate resources and action to improve and restore confidence in water quality. At the federal level, I am pushing for resources to ensure the safety of water, but also make much-needed repairs to our city's aging water system and infrastructure. *The Flint Journal* covered these federal efforts in March. You can view them here.

Additionally, I welcome the announcement recently that the U.S. Environmental Protection Agency will send technical advisors to Flint to assist the city and state. I have repeatedly asked the EPA to send these much-needed experts to help improve the water quality and hopefully restore some public confidence in the safety of our water.

Serious issues remain, and there is a long way to go before complete confidence in the city's drinking water is restored. I am committed to working to ensure that Flint residents get a thorough investigation and answers to their questions.

I hope you'll join me next Wednesday for a telephone town hall update on Flint water.

Sincerely,

Dan Kildee

PROVIDER DRAFT LETTER V.2
October 22, 2015
LoRocco Edits,Travis Edits,Attisha Edits, Peeler Edits
Cross checked with parent letter

Dear Provider:

As you may be aware from recent news reports, elevated levels of lead have been found in the City of Flint's water system.

To help protect the children of Flint from the current lead in water exposure, the Genesee County Health Department and Michigan Department of Health and Human Services are contacting you to assist you in providing guidance to support your families.

Children can be exposed to lead from drinking water in lead pipes, old lead paint, soil, pottery, cosmetics and toys and some home remedies. Adult jobs and hobbies, like auto repair, stained glass and jewelry making, and ammunitions handling can also put children at risk if they touch clothing or play in areas where lead is found.

As a primary care provider, you play a critical role in helping to ensure that children and families exposed to lead receive the care and reassurances they need to manage the potential health impacts of lead poisoning.

Identification. Children suffering from lead poisoning often fail to present outward symptoms. However, early clinical symptoms can include anemia, anorexia, abdominal pain and constipation. Lead is a neuro-toxin, and exposure can result in violent and aggressive behaviors, lead to learning disorders, may cause Attention Deficit Hyperactivity Disorder (ADHD) and has been known to reduce IQ by as many as 5-8 points with levels as low as 10 ug/dL. Lead is metabolized through the gastrointestinal system similar to iron and calcium, with uptake rates depending on the size and weight of the child. The blood half-life of lead is short (approximately 1 month) but the bone half-life can extend into decades.

Due to multiple risk factors facing many residents in the City of Flint (including aging housing conditions and water quality), we recommend that all children under age 6 living in the City of Flint or living in homes that use Flint water, attending school or childcare in Flint, or who spend time with a caregiver in the City of Flint, receive a blood lead test. Blood lead testing should be done through a child's primary care doctor to ensure adequate short-term and long-term follow-up. ***Families should be encouraged to have their children tested immediately either at their doctor's office or the Genesee County Health Department***.

Management of Blood Lead Levels. The following guidance is provided for management of childhood blood lead levels:

- **BLL < 5 ug/dL**
  - A lead level of less than 5 mcg/dL is not typically cause for concern.
  - Provide education and anticipatory guidance to ensure that lead levels do not rise.
  - Consider retesting in 12 months based on risk factors or concerns.
- **BLL >5 ug/dL**
  - **Children with capillary results of 5 ug/dL and higher must have a confirmatory venous blood draw.**
  - Families should receive anticipatory guidance, nutrition counseling, instruction on safe cleaning techniques and appropriate follow-up care from their primary care provider.
  - In-home services including case management and environmental investigations are available for all children with lead levels greater than 5 ug/dL. Refer patients to the Genesee County Health Department for this service.
  - Children with confirmed venous testing results greater than 5ug/dL within the past 18 months must be retested based on Medicaid policy and AAP guidelines. (See attached "Provider Quick Reference). If a child has not been retested within these timeframes, retesting is recommended as soon as possible.
- **BLL > 44 ug/dL.**
  - **Children with capillary results of 5 ug/dL and higher must have a confirmatory venous blood draw.**
  - Lead levels over 44 ug/dL may require hospitalization. Consult with an expert at the Children's Hospital of Michigan in Detroit for additional guidance.
  - Families should receive anticipatory guidance, nutrition counseling, instruction on safe cleaning techniques and appropriate follow-up care from their primary care provider.
  - In-home services including case management and environmental investigations are available for all children with lead levels greater than 5 ug/dL. Refer patients to the Genesee County Health Department for this service.
  - Children with confirmed venous testing results greater than 5ug/dL within the past 18 months must be retested based on Medicaid policy and AAP guidelines. (See attached "Provider Quick Reference). If a child has not been retested within these timeframes, retesting is recommended as soon as possible.

Reminder: All children covered by Medicaid must be tested at age 1 and 2.

Follow-up Care. As providers, there are steps you can take to help support your families:

1. Continue to educate families regarding lead risks and preventative steps that they can take to minimize their risks.
2. Encourage your families to use filtered water for drinking, mixing formula and washing dishes. Families can contact 2-1-1 for information on free water filters.
3. Healthy nutrition is critical for lead-exposed children. Make sure your patients are consuming balanced diets high in iron, calcium and Vitamin C. If you have concerns about their nutrition, consider recommending a multivitamin with iron. WIC and SNAP provide assistance to parents and children who need fresh and healthy foods. Contact the Genesee County WIC office at (810) 237-4537 to learn more. In addition, SNAP offers a Double Bucks program that can provide healthy foods for less.
4. Breastfeeding is highly protective and encouraged. However, if the mother's blood lead level rises above 40ug/dL or her level is greater than 20 ug/dL and the baby has a level above 5 ug/dL breastfeeding is not recommended.
5. Because lead is a neuro-toxin, children with lead poisoning need longitudinal follow-up and may require developmental and behavioral health intervention services. Continue monitoring your patients' development at every visit.
6. Consider additional wrap-around and support services that will benefit your patients such as early childhood home visiting programs, early head start and head start. Call 2-1-1 for more information.

Local Resources. Several local resources are available to you and your patients:

- Blood Testing. Patients are encouraged to contact their primary care provider for testing. The Genesee County Health Department also administers lead tests. Patients in need of transportation should contact 2-1-1 for assistance.
- Water Testing. Water testing is free through the City of Flint Water Testing Plant. Patients can call 810-787-6537 to learn more.
- WIC and SNAP provide assistance to parents and children who need fresh and healthy foods. Contact the Genesee County WIC office at (810) 237-4537 to learn more.
- Child Development. If you have concerns about a child's growth, development or learning contact 2-1-1 for a Home Visiting Program in your area.

draft 3

October 22, 2015

Dear Parent,

To help make sure the children of Flint are safe from lead exposure, the Genesee County Health Department and the Michigan Department of Health and Human Services want to help you understand:

- Where does lead come from?
- What can I do to protect my family?
- Should I get my child tested for lead?
- Where can I find more information about lead?

Where does lead come from?

Lead is a serious health hazard, especially for small children who become lead poisoned when they eat, drink or breathe lead. Elevated levels of lead have been found in the drinking water from lead pipes in the City of Flint. Kids can also be exposed to lead from old lead paint, soil, pottery, cosmetics and toys and some home remedies. Adult jobs and hobbies, like auto repair, stained glass, jewelry making and ammunitions handling can also put children at risk if they touch clothing or play in areas where lead is found.

Should my child get a blood lead test?

Children who live in the City of Flint, live in a home using City of Flint water, or who attend school, childcare or often spend time with a caregiver in the City of Flint should be tested for lead poisoning. *This should be done as soon as possible.*

Where should I go to get a blood lead test for my child?

The best place to get your child's blood lead test is your doctor's office. Your pediatrician will follow up with you on lab tests and provide you with information on what to do next. You can also have a lead test at the Genesee County Health Department. If you need transportation, contact 2-1-1 for help.

Understanding your child's lead test result.

A lead level below 5 means there is little or no lead in your child's blood. Use the tips below to help keep your child safe. Your doctor may suggest retesting your child within the next 12 months to make sure the level does not go up.

Draft 5

A lead level of 5-14 means that your child has had some exposure to lead. Work with your doctor and local health department for further guidance on how to limit your lead exposure. Your doctor may retest your child in 1-3 months to make sure the level does not go up.

Children with very high levels of lead **(over 40)** may require treatment at the hospital.

What Can I Do to Keep My Family Safe?

The following steps should be taken right away to help protect you and your child.

Protecting your family from lead in the water:

- Get your water tested for lead. It's free. Call 810-787-6537 to learn more.
- Use a water filter in your home. Call 2-1-1 for information on free water filters.
- If you do not have a water filter, use bottled water for drinking and mixing formula.
- When cooking or washing the dishes use filtered water. If using unfiltered water, run the water for at least five minutes before you use it.
- Always use cold water when cooking.

Safe cleaning:

Safe Cleaning is Important. Keeping your home clean and safe from lead hazards will help to protect your family.

- Keep children away from lead paint and dust.
- Use wet paper towels to clean up lead dust. Be sure to clean around windows, play areas and floors.
- Wash hands and toys often, using soap and water

Good nutrition:

Some foods will help keep lead from being stored in a child's body. These are foods with a lot of calcium, iron and vitamin C. These foods include:

Calcium Rich Foods	Iron Rich Foods	Foods with Vitamin C
➢ Milk	➢ Beans	➢ Oranges
➢ Cheese	➢ Lean meats like fish and chicken	➢ Orange juice
➢ Yogurt	➢ Whole grain cereals	➢ Grapefruits
➢ Tofu	➢ Peanut butter	➢ Tomatoes
➢ Spinach		➢ Green peppers

Always wash your fruits with filtered water. If you are concerned about your child's diet, talk with your pediatrician who may also recommend a daily multivitamin.

Draft

WIC and SNAP provide assistance to parents and children who need fresh and healthy foods. Contact the **Genesee County WIC office at (810) 237-4537** to learn more. SNAP also offers a Double Bucks program to purchase even more healthy food for no additional costs.

Where can I get more information on lead?

Hi everyone,

Following up on this. Do you have any concerns or edits? Additionally, we are working with GCHD to issue a joint release when these letters are sent. That's attached for your reference as well.

Thank you,

Angela

October 22, 2015

Dear Parent,

To help make sure the children of Flint are safe from lead exposure, the Genesee County Health Department and the Michigan Department of Health and Human Services want to help you understand:

- Where does lead come from?
- What can I do to protect my family?
- Should I get my child tested for lead?
- Where can I find more information about lead?

Where does lead come from?

Lead is a serious health hazard, especially for small children who become lead poisoned when they eat, drink or breathe lead. Elevated levels of lead have been found in the drinking water from lead pipes in the City of Flint. Kids can also be exposed to lead from old lead paint, soil, pottery, cosmetics and toys and some home remedies. Adult jobs and hobbies, like auto repair, stained glass, jewelry making and ammunitions handling can also put children at risk if they touch clothing or play in areas where lead is found.

Should my child get a blood lead test?

Children who live in the City of Flint, live in a home using City of Flint water, or who attend school, childcare or often spend time with a caregiver in the City of Flint should be tested for lead poisoning. *This should be done as soon as possible.*

Where should I go to get a blood lead test for my child?

The best place to get your child's blood lead test is your doctor's office. Your pediatrician will follow up with you on lab tests and provide you with information on what to do next. You can also have a lead test at the Genesee County Health Department. If you need transportation, contact 2-1-1 for help.

Understanding your child's lead test result.

A lead level below 5 means there is little or no lead in your child's blood. Use the tips below to help keep your child safe. Your doctor may suggest retesting your child within the next 12 months to make sure the level does not go up.

Draft 5

A lead level of 5-14 means that your child has had some exposure to lead. Work with your doctor and local health department for further guidance on how to limit your lead exposure. Your doctor may retest your child in 1-3 months to make sure the level does not go up.

Children with very high levels of lead **(over 40)** may require treatment at the hospital.

What Can I Do to Keep My Family Safe?

The following steps should be taken right away to help protect you and your child.

Protecting your family from lead in the water:

- Get your water tested for lead. It's free. Call 810-787-6537 to learn more.
- Use a water filter in your home. Call 2-1-1 for information on free water filters.
- If you do not have a water filter, use bottled water for drinking and mixing formula.
- When cooking or washing the dishes use filtered water. If using unfiltered water, run the water for at least five minutes before you use it.
- Always use cold water when cooking.

Safe cleaning:

Safe Cleaning is Important. Keeping your home clean and safe from lead hazards will help to protect your family.

- Keep children away from lead paint and dust.
- Use wet paper towels to clean up lead dust. Be sure to clean around windows, play areas and floors.
- Wash hands and toys often, using soap and water

Good nutrition:

Some foods will help keep lead from being stored in a child's body. These are foods with a lot of calcium, iron and vitamin C. These foods include:

Calcium Rich Foods	Iron Rich Foods	Foods with Vitamin C
➢ Milk	➢ Beans	➢ Oranges
➢ Cheese	➢ Lean meats like fish and chicken	➢ Orange juice
➢ Yogurt	➢ Whole grain cereals	➢ Grapefruits
➢ Tofu	➢ Peanut butter	➢ Tomatoes
➢ Spinach		➢ Green peppers

Always wash your fruits with filtered water. If you are concerned about your child's diet, talk with your pediatrician who may also recommend a daily multivitamin.

GCHD and MDHHS Partner to Issue Guidance to Flint Parents, Providers

FLINT, Mich. – In a joint effort to continue education within the community around lead exposure, the Genesee County Health Department (GCHD) and Michigan Department of Health and Human Services (MDHHS) today issued letters to the provider community and parents in Flint to assist in providing guidance to support families.

In response to the elevated blood lead levels found in some Flint children, GCHD and MDHHS have worked together closely and with Dr. Mona Hanna-Attisha of the Hurley Medical Center to develop guidance for families and providers.

GCHD QUOTE

Parents are being provided information regarding lead testing, how to reduce lead exposure for your family, where lead comes from, and community and state resources for more information. Children can be exposed to lead from drinking water in lead pipes, old lead paint, soil, pottery, cosmetics and toys and some home remedies. Adult jobs and hobbies, like auto repair, stained glass and jewelry making, and ammunitions handling can also put children at risk if they touch clothing or play in areas where lead is found.

"As we continue to find ways to educate and guide the Flint community towards reducing lead exposures, we are appreciate of the collaboration with Genesee County Health Department and Dr. Attisha," said Dr. Eden Wells, Chief Medical Executive with MDHHS. "Parents and providers can take a number of steps to help reduce exposure, identify signs of lead poisoning, and begin follow up care as needed. Working together we can all help to protect the health of families in Flint."

Primary care providers can assist in helping to ensure that children and families exposed to lead receive the care and resources they need to manage the potential health impacts of lead poisoning. Guidance was provided to them regarding identification of lead poisoning, management of elevated blood lead levels, follow-up care, and community and state resources.

GCHD and MDHHS issued the following recommendations for parents:

- Families who live in the City of Flint and are on the Flint water system or who attend school, childcare, or spend time with a caregiver in the City of Flint, are encouraged to get their children tested for lead poisoning at their doctor's office or GCHD.
- Families can get their water tested for lead for free. Call 810-787-6537 for details about how.
- Families are encouraged to use a water filter in their home, and free filters are still available. Call 2-1-1 for information about where to pick up a free filter.
- When cooking or washing the dishes, use filtered water. If using unfiltered water, run the water for at least give minutes before you use it. Always use cold water when cooking.
- Safe cleaning can also reduce the risk of lead exposure in the home. Keep children away from lead paint and dust; use wet paper towels to clean up lead dust around windows, play areas and floors; and wash hands and toys often, using soap and water
- Lastly, always wash fruits with filtered water. Some foods help keep lead from being stored in the child's body, such as Calcium rich foods, Iron rich foods, and foods with Vitamin C.

GCHD and MDHHS will continue to provide more information to the community regarding reducing lead exposure and protecting the health of Flint residents. For more information, visit www.michigan.gov/lead.

Subject: Robin Erb Interview - Dr. Wells

Hello –

Today Dr. Wells had a phone interview with Robin Erb regarding blood lead levels in Flint. Robin said she's hearing concern from parents who feel like they don't know what to do. Robin heard about the parent letter and wanted to know what it contains, when it will be going out, and what other steps we're taking to provide clear direction to residents. Dr. Wells confirmed that yes, we are working with the local health department to finalize a letter that will be distributed to parents in the next couple of days. Dr. Wells reminded her of the www.michigan.gov/flintwater website that has been up since the first week of October, and said that many of those documents are being distributed through various channels by our partner and provider networks. She also acknowledged that in some areas this can be a difficult to reach population, and so it's important that we think creatively about how to reach them – that we cannot rely solely on the news or internet. Dr. Wells emphasized that our priority population is children 0 – 6 years old, which is why the parent letters will be so beneficial.

Once the letter is ready to go, I told Robin we would share it with her. This is for a Sunday story.

Hi everyone,

Attached are the updated drafts of the letters and press release with Sara's edits. We'll circulate these with the local health department and let you know before these are ready to be sent out.

Thank you.
Angela

Angela – there are two things that do need to get addressed before these go out. I left a message earlier.

Please call at your earliest convenience. Mobile will be best PPI

Glad and good to see this kind of coordination/collaboration and outreach.

Thanks much,
SW

GCHD and MDHHS Partner to Issue Guidance to Flint Parents, Providers

FLINT, Mich. – In a joint effort to continue informing the community about lead exposure, the Genesee County Health Department (GCHD) and Michigan Department of Health and Human Services (MDHHS) today issued letters to parents and the provider community in Flint to assist in providing guidance to support families.

In response to the elevated blood lead levels found in some Flint children, GCHD and MDHHS have worked together closely to develop guidance for families and providers.

GCHD QUOTE

Parents are being provided information regarding lead testing, how to reduce lead exposure for your family, where lead comes from, and community and state resources for more information. Children can be exposed to lead from drinking water in lead pipes, old lead paint, soil, pottery, cosmetics and toys and some home remedies. Adult jobs and hobbies, like auto repair, stained glass and jewelry making, and ammunitions handling can also put children at risk if they touch clothing or play in areas where lead is found.

"As we continue to find ways to inform and guide the Flint community towards reducing lead exposures, we are appreciate of the collaboration with Genesee County Health Department," said Dr. Eden Wells, Chief Medical Executive with MDHHS. "Parents and providers can take a number of steps to help reduce exposure, identify signs of lead poisoning, and begin follow up care as needed. Working together we can all help to protect the health of families in Flint."

Primary care providers can assist in helping to ensure that children and families exposed to lead receive the care and resources they need to manage the potential health impacts of lead poisoning. MDHHS and GCHD worked with Dr. Mona Hanna-Attisha of the Hurley Medical Center to develop testing protocols and guidance regarding identification of lead poisoning, management of elevated blood lead levels, follow-up care, and community and state resources.

GCHD and MDHHS issued the following recommendations for parents:

- Families who live in the City of Flint and are on the Flint water system or who attend school, childcare, or spend time with a caregiver in the City of Flint, are encouraged to get their children tested for lead poisoning at their doctor's office or GCHD.
- Families can get their water tested for lead for free. Call 810-787-6537 for details about how.
- Families are encouraged to use a water filter in their home, and free filters are still available. Call 2-1-1 for information about where to pick up a free filter.
- Use filtered tap water for drinking (including making coffee, drink mixes, juice, baby formula), and cooking (even if you boil the water, the lead will stay in the water and food). Always use cold water when cooking.
- You can use unfiltered tap water for washing your hands, and washing dishes. If using unfiltered water, run the water for at least five minutes before you use it.
- Safe cleaning can also reduce the risk of lead exposure in the home. You can use unfiltered tap water for the following wiping down countertops, mopping floors, and washing clothes.

- Keep children away from lead paint and dust; use wet paper towels to clean up lead dust around windows, play areas and floors; and wash hands and toys often, using soap and water
- Lastly, always wash fruits with filtered water. Some foods help keep lead from being stored in the child's body, such as Calcium rich foods, Iron rich foods, and foods with Vitamin C.

GCHD and MDHHS will continue to provide more information to the community regarding reducing lead exposure and protecting the health of Flint residents. For more information, visit www.michigan.gov/lead.

# # #

October 25, 2015

Dear Parent,

To help make sure the children of Flint are safe from lead exposure, the Genesee County Health Department and the Michigan Department of Health and Human Services want to help you understand:

- Where does lead come from?
- What can I do to protect my family?
- Should I get my child tested for lead?
- Where can I find more information about lead?

Where does lead come from?

Lead is a serious health hazard, especially for small children who become lead poisoned when they eat, drink or breathe lead. Elevated levels of lead have been found in the drinking water from lead pipes in the City of Flint. Kids can also be exposed to lead from old lead paint, soil, pottery, cosmetics and toys and some home remedies. Adult jobs and hobbies, like auto repair, stained glass, jewelry making and ammunitions handling can also put children at risk if they touch clothing or play in areas where lead is found.

Should my child get a blood lead test?

Children who live in the City of Flint, live in a home using City of Flint water, or who attend school, childcare or often spend time with a caregiver in the City of Flint should be tested for lead poisoning. *This should be done as soon as possible.*

Where should I go to get a blood lead test for my child?

The best place to get your child's blood lead test is your doctor's office. Your pediatrician will follow up with you on lab tests and provide you with information on what to do next. You can also have a lead test at the Genesee County Health Department. If you need transportation, contact 2-1-1 for help.

Understanding your child's lead test result.

A lead level below 5 means there is little or no lead in your child's blood. Use the tips below to help keep your child safe. Your doctor may suggest retesting your child within the next 12 months to make sure the level does not go up.

Draft 5

A lead level of 5-14 means that your child has had some exposure to lead. Work with your doctor and local health department for further guidance on how to limit your lead exposure. Your doctor may retest your child in 1-3 months to make sure the level does not go up.

Children with very high levels of lead **(over 40)** may require treatment at the hospital.

What Can I Do to Keep My Family Safe?

The following steps should be taken right away to help protect you and your child.

Protecting your family from lead in the water:

- Get your water tested for lead. It's free. Call (810) 787-6537 to learn more.
- Use a water filter in your home. Call 2-1-1 for information on free water filters.
- If you do not have a water filter, use bottled water for drinking and mixing formula.
- Use filtered tap water for drinking (including making coffee, drink mixes, juice, baby formula), and cooking (even if you boil the water, the lead will stay in the water and food). Always use cold water when cooking.
- You can use unfiltered tap water for washing your hands, and washing dishes. If using unfiltered water, run the water for at least five minutes before you use it.

Safe cleaning:

Safe Cleaning is important. Keeping your home clean and safe from lead hazards will help to protect your family.

- You can use unfiltered tap water for the following wiping down countertops, mopping floors, and washing clothes.
- Keep children away from lead paint and dust.
- Use wet paper towels to clean up lead dust. Be sure to clean around windows, play areas and floors.
- Wash hands and toys often, using soap and water.

Good nutrition:

Some foods will help keep lead from being stored in a child's body. These are foods with a lot of calcium, iron and vitamin C. These foods include:

Calcium Rich Foods	Iron Rich Foods	Foods with Vitamin C
➢ Milk	➢ Beans	➢ Oranges
➢ Cheese	➢ Lean meats like fish and chicken	➢ Orange juice
➢ Yogurt	➢ Whole grain cereals	➢ Grapefruits
➢ Tofu	➢ Peanut butter	➢ Tomatoes
➢ Spinach		➢ Green peppers

Always

Draft

wash your fruits with filtered water. If you are concerned about your child's diet, talk with your pediatrician who may also recommend a daily multivitamin.

WIC and SNAP provide assistance to parents and children who need fresh and healthy foods. Contact the **Genesee County WIC office at (810) 237-4537** to learn more. SNAP also offers a Double Bucks program to purchase even more healthy food for no additional costs.

PROVIDER DRAFT LETTER V.5
October 25, 2015
LoRocco Edits,Travis Edits,Attisha Edits, Peeler, Minicuci Edits
Cross checked with parent letter

Dear Provider:

As you may be aware from recent news reports, elevated levels of lead have been found in lead pipes within the City of Flint's water system.

To help protect the children of Flint from the current lead in water exposure, the Genesee County Health Department and Michigan Department of Health and Human Services are contacting you to assist you in providing guidance to support your families.

Children can be exposed to lead from drinking water in lead pipes, old lead paint, soil, pottery, cosmetics and toys and some home remedies. Adult jobs and hobbies, like auto repair, stained glass and jewelry making, and ammunitions handling can also put children at risk if they touch clothing or play in areas where lead is found.

As a primary care provider, you play a critical role in helping to ensure that children and families exposed to lead receive the care and reassurances they need to manage the potential health impacts of lead poisoning.

Identification. Children suffering from lead poisoning often fail to present outward symptoms. However, early clinical symptoms can include anemia, anorexia, abdominal pain and constipation. Lead is a neuro-toxin, and exposure can result in violent and aggressive behaviors, lead to learning disorders, may cause Attention Deficit Hyperactivity Disorder (ADHD) and has been known to reduce IQ by as many as 5-8 points with levels as low as 10 ug/dL. Lead is metabolized through the gastrointestinal system similar to iron and calcium, with uptake rates depending on the size and weight of the child. The blood half-life of lead is short (approximately 1 month) but the bone half-life can extend into decades.

Due to multiple risk factors facing many residents in the City of Flint (including aging housing conditions and water quality), we recommend that all children under age 6 living in the City of Flint or living in homes that use Flint water, attending school or childcare in Flint, or who spend time with a caregiver in the City of Flint, receive a blood lead test. Blood lead testing should be done through a child's primary care doctor to ensure adequate short-term and long-term follow-up. ***Families should be encouraged to have their children tested immediately either at their doctor's office or the Genesee County Health Department***.

Management of Blood Lead Levels. The following guidance is provided for management of childhood blood lead levels:

- **BLL < 5 ug/dL**
  - A lead level of less than 5 mcg/dL is not typically cause for concern.
  - Provide education and anticipatory guidance to ensure that lead levels do not rise.
  - Consider retesting in 12 months based on risk factors or concerns.
- **BLL >5 ug/dL**
  - **Children with capillary results of 5 ug/dL and higher must have a confirmatory venous blood draw.**
  - Families should receive anticipatory guidance, nutrition counseling, instruction on safe cleaning techniques and appropriate follow-up care from their primary care provider.

draft

PROVIDER DRAFT LETTER V.5
October 25, 2015
LoRocco Edits,Travis Edits,Attisha Edits, Peeler, Minicuci Edits
Cross checked with parent letter

- In-home services including case management and environmental investigations are available for all children with lead levels greater than 5 ug/dL. Refer patients to the Genesee County Health Department for this service.
- Children with confirmed venous testing results greater than 5ug/dL within the past 18 months must be retested based on Medicaid policy and AAP guidelines. (See attached "Provider Quick Reference). If a child has not been retested within these timeframes, retesting is recommended as soon as possible.

- **BLL > 44 ug/dL.**
  - **Children with capillary results of 5 ug/dL and higher must have a confirmatory venous blood draw.**
  - Lead levels over 44 ug/dL may require hospitalization. Consult with an expert at the Children's Hospital of Michigan in Detroit for additional guidance.
  - Families should receive anticipatory guidance, nutrition counseling, instruction on safe cleaning techniques and appropriate follow-up care from their primary care provider.
  - In-home services including case management and environmental investigations are available for all children with lead levels greater than 5 ug/dL. Refer patients to the Genesee County Health Department for this service.
  - Children with confirmed venous testing results greater than 5ug/dL within the past 18 months must be retested based on Medicaid policy and AAP guidelines. (See attached "Provider Quick Reference). If a child has not been retested within these timeframes, retesting is recommended as soon as possible.

Reminder: All children covered by Medicaid must be tested at age 1 and 2.

Follow-up Care. As providers, there are steps you can take to help support your families:

1. Continue to inform and educate families regarding lead risks and preventative steps that they can take to minimize their risks.
2. Encourage your families to use filtered water for drinking, mixing formula and washing dishes. Families can contact 2-1-1 for information on free water filters.
3. Healthy nutrition is critical for lead-exposed children. Make sure your patients are consuming balanced diets high in iron, calcium and Vitamin C. If you have concerns about their nutrition, consider recommending a multivitamin with iron. WIC and SNAP provide assistance to parents and children who need fresh and healthy foods. Contact the Genesee County WIC office at (810) 237-4537 to learn more. In addition, SNAP offers a Double Bucks program that can provide healthy foods for less.
4. Breastfeeding is highly protective and encouraged. However, if the mother's blood lead level rises above 40ug/dL or her level is greater than 20 ug/dL and the baby has a level above 5 ug/dL breastfeeding is not recommended.
5. Because lead is a neuro-toxin, children with lead poisoning need longitudinal follow-up and may require developmental and behavioral health intervention services. Continue monitoring your patients' development at every visit.
6. Consider additional wrap-around and support services that will benefit your patients such as early childhood home visiting programs, early head start and head start. Call 2-1-1 for more information.

Local Resources. Several local resources are available to you and your patients:

- Blood Testing. Patients are encouraged to contact their primary care provider for testing. The Genesee County Health Department also administers lead tests. Patients in need of transportation should contact 2-1-1 for assistance.
- Water Testing. Water testing is free through the City of Flint Water Testing Plant. Patients can call 810-787-6537 to learn more.
- WIC and SNAP provide assistance to parents and children who need fresh and healthy foods. Contact the Genesee County WIC office at (810) 237-4537 to learn more.
- Child Development. If you have concerns about a child's growth, development or learning contact 2-1-1 for a Home Visiting Program in your area.

Subject: RE: Schools Water Testing

Right, got it now!
Director Wyant did more than 15 interviews one week ago today. In those, we talked about the governor's plan, including sending teams into the schools in Flint to look for sources and check water sources for lead.

Several of the reporters keyed-in on the provision in the governor's plan which calls for the state to promote lead awareness for the schools, many of which have never been tested.
The public awareness campaign will be lead by DHHS, It is still under development. This did not stop a lot of reporters from wanting to talk about it.

Here's an example from today's Detroit News (front page):
http://www.detroitnews.com/story/life/wellness/2015/10/26/school-water/74606636/

So, there's no letter from the state to the education community at large. All that has been communicated to the schools at this point has been communicated by local reporters playing off the headlines from Flint. There's been a few echo stories in local communities.

Hi all,

Just a note. We finalized the language in the Genesee County Health Department release and were going to wait to send it until the letters went out but then the county misunderstood and sent it out today anyway. See attached.

Seen as this release said the letters went out today, but they haven't even been printed yet, they are working on a retraction to correct this.

Thank you,

Subject: Flint Water Inquiry

There are several groups who are demanding the Governor issue a State of Emerfency related to the water & infrastructure situation in Flint. They claim it would open up the door for federal assistance.

My questions are...

DOES the governor have the power/authority to declare a State of Emergency for issues like what's happening in Flint?

IF such a declaration was made- does it open the doors to federal assistance for example... to replace old lead service lines... and/or other infrastructure?

Has the governor considered/discussed asking for additional monetary help from the federal government for infrastructure repairs/replacements in Flint?

Lastly, the governor has called for a third party review of the decision making that went into Flint's water source switch- problems that followed. What's the latest on that effort? Will the legislature have a role- Sen. Ananich says Legislature should have a role.

Thank you

Attachments: Fact Sheet - Emergency or Disaster Declaration Process.pdf

Hi Dave,

That's correct. All emergencies and disaster declarations begin and end at the local level through the Michigan Emergency Management Act (Public Act 390 of 1976).

Our third district Michigan State Police emergency management coordinator has been working closely working with Genesee County Emergency Management Coordinator Jenifer Boyer. At this time, the county has not requested state assistance through the Michigan Emergency Management Act.

Jenifer Boyer would be a good source to talk to about what sort of local declarations have been made and operations are taking place at the local level.

I hope this helps. Please let me know if you have any other questions.

Thanks,

Ron

Subject: RE: Flint Water Inquiry

Hi Damon,

I'm including on this email Ron Leix from Michigan State Police, who is the expert in all things related to emergencies.

My impression is that such a declaration request starts with local authorities. Ron, can you help me with the process and how it works?

Damon, it's also important to remember that the state continues to work with Flint leaders on their infrastructure challenges. In addition to the $6 million the state recently approved for the temporary reconnection to the Great Lakes Water Authority, the state earlier awarded the city $2 million in grants to improve infrastructure and $2.2 million in savings from restructured loans that can be directed to infrastructure repairs.

Dave

Subject: Flint Water Inquiry

There are several groups who are demanding the Governor issue a State of Emerfency related to the water & infrastructure situation in Flint. They claim it would open up the door for federal assistance.

My questions are...

DOES the governor have the power/authority to declare a State of Emergency for issues like what's happening in Flint?

IF such a declaration was made- does it open the doors to federal assistance for example... to replace old lead service lines... and/or other infrastructure?

Has the governor considered/discussed asking for additional monetary help from the federal government for infrastructure repairs/replacements in Flint?

Lastly, the governor has called for a third party review of the decision making that went into Flint's water source switch-problems that followed. What's the latest on that effort? Will the legislature have a role- Sen. Ananich says Legislature should have a role.

Thank you

Damon Maloney

Fact Sheet

Emergency or Disaster Declaration Process

The Michigan Emergency Management Act (Public Act 390 of 1976, as amended) outlines the emergency management process for the state of Michigan. If an incident exhausts state resources, the Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 USC §§ 5121-5207) establishes the process for requesting and obtaining a presidential disaster declaration and assistance from the federal government.

STEP BY STEP: Emergency or Disaster Declaration Process

1. Disasters are first and foremost local events. Most disasters are handled by local government with minimal or no state assistance. At the onset of a disaster or emergency, local emergency responders, joined by volunteers and the private sector, are the first to be involved.

2. A local jurisdiction may declare a "Local State of Emergency" exists when they have sustained widespread or severe damage, injury or loss of life or property. A local declaration ensures the response and recovery aspects of the emergency operations plan have been activated, and local resources are being utilized to the fullest extent possible. Authorities may authorize local aid and assistance.

3. If recovery efforts are beyond the ability of local government, the community may turn to the state to request assistance. All requests for assistance are channeled through the Michigan State Police, Emergency Management and Homeland Security Division.

4. The Michigan State Police, Emergency Management and Homeland Security Division reviews specific requests for state assistance and makes recommendations to the Governor's Office. The Governor's authority, granted by the Michigan Emergency Management Act, may include mobilizing state government agencies to provide necessary support and assistance to local authorities under a "State of Emergency" or "State of Disaster" declaration.

5. If state and local government resources are unable to cope with the emergency or disaster, the Governor may request assistance through the U.S. Department of Homeland Security (DHS), Federal Emergency Management Agency (FEMA), Region V Office in Chicago.

6. At the request of the Governor, FEMA may conduct a Preliminary Damage Assessment (PDA) in cooperation with state and local emergency management officials. The results of the PDA will be reviewed by state officials and the Governor's Office and used as a basis for determining whether to request federal financial assistance.

7. Should the state request federal disaster assistance, FEMA will review the request and make a recommendation to the president, who will make the final determination on any disaster aid to be provided to the state. The goal of disaster assistance is not to make individuals, businesses or government entities whole again, but to restore the community to a level that meets expected health and safety considerations.

Thanks for the reply, Sara.

Just to be clear: The governor's office considers itself exempt from FOIA, so if the report/findings/whatever you want to call it is delivered to the governor, it will not be subject to FOIA? Does the task force have a budget to hire investigators? It's not a public body so it doesn't have subpoena power, right?

Bryn and Ron,

Please help. We're confused by the part of my statement that directly addresses the concerns raised by Rev Bulloch was omitted from the story.

Rev. Bulloch says: "There doesn't seem to be a sense of urgency around responsibility and accountability" for Flint's water emergency, Bullock said.

The omitted part of my quote says: "The task force expects to complete its work within three months. It would be premature to take any action until after the task force submits its report."

Leaving this out appears I was dodging the question. I instead addressed it head on. Can you please add that important detail to the story?

Thanks,

Dave

We had a good, respectful meeting with a small group from Flint that included pastors, concerned residents and Councilman Mays.

Gov. Snyder has assembled a third-party task force that includes respected experts in public health, water management and environmental protection for an unbiased review of all actions of the city, state and federal governments regarding water use and testing in Flint.

That task force is expected to look at what occurred as well as make recommendations for what should happen moving forward because we believe that Flint residents need clean, safe water. The task force expects to complete its work within three months. It would be premature to take any action until after the task force submits its report.

Meanwhile, the Department of Environmental Quality and the Department of Health and Human Services continue to work with city leaders, educators and residents to continue testing and carrying out other aspects of the governor's action plan.

EM SUBMISSION NO.: 2013 EM140

PRESENTED: 6-21-13

ADOPTED: 6-26-13

BY THE EMERGENCY MANAGER:

Resolution Authorizing Approval to Enter into a Professional Engineering Services Contract for the Implementation of Placing the Flint Water Plant into Operation

The City of Flint requires professional engineering services for assistance in placing the Flint Water Plant into operation using the Flint River as a primary drinking water source for approximately two years and then converting to KWA delivered lake water when available at a cost of $171,000.00; and

The City of Flint is seeking to enter into a sole source contract with Lockwood, Andrews & Newnam, Inc., with funding coming from the Utilities Administration FY14 account in 591-536.100-801.000; and

IT RESOLVED, That appropriate City Officials are authorized to enter into a Professional Engineering Services contract with Lockwood, Andrews & Newnam, Inc., for the administration of placing the Flint Water Plant into operation using the Flint River as a primary drinking water source at a cost of $171,000.00. Funding will come from the Utilities Administration FY14 account 591-536.100-801.000

APPROVED AS TO FORM:

RESOLUTION STAFF REVIEW

Date: June 17, 2013

Agenda Item Title: Resolution Authorizing Approval to Enter into a Professional Engineering Services Contract for the implementation of Placing the Flint Water Plant into Operation

Prepared by:
Yolanda Gray, Utilities Accounting Coordinator

Summary of Proposed Action:
Resolution authorizing the City of Flint to enter into a sole source contract with Lockwood, Andrews & Newnam for professional engineering services to place the Flint Water Plant into operation using the Flint River as a primary drinking water source.

Financial Implications:
$171,000.00

Pre-encumbered?: Yes____ No x Requisition: Funding will be available in the FY14 Utilities Administration budget.

Account No. FY14 591-536.100-801.000

Other implications (i.e. collective bargaining):
No other implications are known at this time.

Staff Recommendation: Recommend Approval

Every municipal drinking water system is required by law to have a certified operator on staff. In Flint's case, they added outside expertise on contract as well as having a certified operator. The nuance in your question is the idea that they don't do anything locally without being told to do so by the State. Not the case at all. Plenty of systems around the state make adjustments to their drinking water system within guidelines. The DEQ staff offer counsel and guidance, but State's formal role is to serve as regulator, not operator.
>
> Flint commissioned the report you mentioned. If they ignored the recommendations in appendix of the report they commissioned, ask them why. Our take was that Flint was to run two consecutive tests of the system to determine optimization needs. The U.S. EPA finally came out with its finished guidance on that and distributed it nationally this week. I've

enclosed it. We were pleased that they acknowledged the Lead and Copper rule is worded ambiguously on continued corrosion control. The clarification will help Michigan and every other state going forward.

Your second questions also is more appropriately directed to Flint. The city made the decision to use the river, the historic backup, as their primary. DEQ's role was to oversee necessary changes to the drinking water plant to ensure the water met Safe Drinking Water standards.

To your final question, I believe it was reintroduced when the Flint City Council voted 7-1 to join Karegnondi, and DWSD responded by sending Flint a one-year contract termination notice. While that notice was not a shutoff notice, it did signal that the contract rates for water would be terminated and thus open for renegotiation. But again, this is a question best addressed by the city.

Hey Brad,

Just want to make sure you got my voice mail. I have some follow up questions based on the FOIA'd material I received yesterday.

Specifically:

- By 2013, MDEQ had a 2011 Flint report about the prospect of using Flint River water as a drinking water source. That report includes an appendix that lists phosphates, which we all now know are used for corrosion control, in the list of chemicals that would be required to treat the water. With a report in hand stating phosphates should be used, why were they not required?
- Based on the materials I received, the 2011 report comes up briefly in 2013, when the KWA switch was contemplated, then seems to drop out of the picture. Why was a report about the viability of the Flint River water as a drinking water source not part of the 2014 conversations about whether to switch to the river or to stay connected to DWSD?
- A report included in the material I FOIA'd said that by the end of 2012, Flint officials did not want to pursue the option of using the Flint River as a drinking water source. Why was it reintroduced?

Need a response ASAP. This is for Sunday.

Nancy

The state doesn't run municipal drinking water systems, but it does sign off on their plans for water treatment -- yes?

If the state's assertion is that it mistakenly applied an ambiguously worded standard, it seems to me that the existence of a report, in MDEQ's possession before the switch, that indicated the need for -- and cost of -- corrosion control should have prompted further investigation? Do you disagree?

(BTW, per this report, phosphates would have cost $60 a day.)

These questions all make the presupposition that the state actually runs municipal drinking water systems. Every municipal drinking water system is required by law to have a certified operator on staff. In Flint's case, they added outside expertise on contract as well as having a certified operator. The nuance in your question is the idea that they don't do anything locally without being told to do so by the State. Not the case at all. Plenty of systems around the state make adjustments to their drinking water system within guidelines. The DEQ staff offer counsel and guidance, but State's formal role is to serve as regulator, not operator.

Flint commissioned the report you mentioned. If they ignored the recommendations in appendix of the report they commissioned, they can probably best explain why. Our take was that Flint was to run two consecutive tests of the system to determine optimization needs. The U.S. EPA finally came out with its finished guidance on that and distributed it nationally this week. I've enclosed it. We were pleased that they acknowledged the Lead and Copper rule is worded ambiguously on continued corrosion control. The clarification will help Michigan and every other state going forward.

Your second questions also is more appropriately directed to Flint. The city made the decision to use the river, the historic backup, as their primary. DEQ's role was to oversee necessary changes to the drinking water plant to ensure the water met Safe Drinking Water standards.

To your final question, I recall it was reintroduced when the Flint City Council voted 7-1 to join Karegnondi, and DWSD responded by sending Flint a one-year contract termination notice. While that notice was not a shutoff notice, it did signal that the contract rates for water would be terminated and thus open for renegotiation. But again, this is a question best addressed by the city.

These issues will undoubtedly be considered by the Governor's After Action Review Task Force. Until that review is finalized, we don't have much more to say about it. The DEQ is now focused on implementing the Governor's 10-point plan to protect kids and families in Flint, which includes free tap filters for all city residents as a precaution, free home water testing and children's blood tests for all city residents, and an unprecedented look at potential for lead exposure in the city schools, among other things.

Nancy, we believe we've responded to your inquiry and provided the information you requested. As I mentioned before, we are working to provide all necessary information to the after action review task force, and the DEQ is focused on moving forward and taking care of priorities in Flint.
Thank you for the opportunity to comment on this issue.

The state doesn't run municipal drinking water systems, but it does sign off on their plans for water treatment – yes?

If the state's assertion is that it mistakenly applied an ambiguously worded standard, it seems to me that the existence of a report, in MDEQ's possession before the switch, that indicated the need for – and cost of – corrosion control should have prompted further investigation? Do you disagree?

(BTW, per this report, phosphates would have cost $60 a day.)

Subject: RE: Need comment ASAP

These questions all make the presupposition that the state actually runs municipal drinking water systems. Every municipal drinking water system is required by law to have a certified operator on staff. In Flint's case, they added outside expertise on

contract as well as having a certified operator. The nuance in your question is the idea that they don't do anything locally without being told to do so by the State. Not the case at all. Plenty of systems around the state make adjustments to their drinking water system within guidelines. The DEQ staff offer counsel and guidance, but State's formal role is to serve as regulator, not operator.

Flint commissioned the report you mentioned. If they ignored the recommendations in appendix of the report they commissioned, they can probably best explain why. Our take was that Flint was to run two consecutive tests of the system to determine optimization needs. The U.S. EPA finally came out with its finished guidance on that and distributed it nationally this week. I've enclosed it. We were pleased that they acknowledged the Lead and Copper rule is worded ambiguously on continued corrosion control. The clarification will help Michigan and every other state going forward.

Your second questions also is more appropriately directed to Flint. The city made the decision to use the river, the historic backup, as their primary. DEQ's role was to oversee necessary changes to the drinking water plant to ensure the water met Safe Drinking Water standards.

To your final question, I recall it was reintroduced when the Flint City Council voted 7-1 to join Karegnondi, and DWSD responded by sending Flint a one-year contract termination notice. While that notice was not a shutoff notice, it did signal that the contract rates for water would be terminated and thus open for renegotiation. Freeman Elementary water testing shows lead exposure limited to fixtures

Experts release water testing results on schools and homes in Flint

As part of Gov. Rick Snyder's action plan for Flint drinking water, the DEQ today released water testing data from nearly 400 homes and businesses in Flint as well as comprehensive sampling results from Freeman Elementary School.

Both sets of data indicate the problems with lead are localized to individual buildings or even individual faucets, rather than system-wide issues.

"The results from this data underline the need for water testing at all homes, businesses, schools and other buildings in Flint," said George Krisztian, the DEQ's Flint Action Plan Coordinator. "Problems with lead exposure appear to be localized to individual service lines or plumbing fixtures, and we want to see all families in Flint take advantage of free water testing from the state."

Freeman Elementary testing results
At Freeman Elementary, 31 faucets were tested using a series of four samples each. Twenty-two outlets did not show elevated lead exposure, but nine faucets came back with initially high results.

Those nine outlets involve brass components, indicating the problem involves the fixtures or plumbing immediately surrounding the fixture. When the faucets and fountains were operated for several minutes, lead levels fell significantly, in some cases to non-detectable levels.

Additional testing designed to look deep into the school's plumbing did not suggest larger, systemic issues.

Freeman Elementary has several options for remedying the issues at these nine faucets and fountains. The school can elect not to use those particular fountains, or implement a formalized flushing regimen. The sampling results indicate that for all but one tap, a 3- to 4-minute flushing period each morning would drastically reduce lead exposure.

For a permanent solution, the school should opt to replace the faucets and fountains of concern.

"The safety and health of our students are our primary concern at Flint Community Schools, so we will start work as soon as possible to replace faucets, aerators and other related

components where high lead levels were detected," FCS Superintendent Bilal Tawwab said. "Once those fixes have been made, the DEQ has offered to provide additional testing of the water at Freeman Elementary to ensure the water from every sample is safe for our students. Flint Community Schools appreciates the efforts by the DEQ, working with all stakeholders to make sure our water continues to be tested and that our students have access to safe, clean drinking water."

For Freeman Elementary's complete sampling results and more information about how sampling was conducted, visit www.michigan.gov/flintwater.

The DEQ and the DLARA also have conducted sampling at other Flint schools, and results will soon be available on the DEQ's website. Additionally, the state will test every other school in the Flint Community Schools district, as well as any school or daycare in the city. Interested schools and daycare centers should contact George Krisztian at krisztiang@michigan.gov.

Homeowner and other customer-requested testing results
Results from the 381 samples from homes, businesses, schools and other facilities that took advantage of free water testing through the state showed similar, localized results. More than 75 percent of the samples analyzed demonstrated lead results of 5 parts per billion or less, and more than 91 percent demonstrated lead results of 15 parts per billion or less.

This data suggests that while some homes experience elevated lead level results due to lead service lines or in-home plumbing, many other homes experience little to no lead. This can make it difficult for homeowners and businesses to predict their lead exposure.

"Since it's not easy to predict if an individual home's water is at risk for lead, the best thing all residents can do is get their water tested," Krisztian said. "It's a free test that provides valuable information for families."

Testing is available for free by contacting the Flint Water Plant at 810-787-6537 and pressing 1, or by emailing flintwater@cityofflint.com.

For more information about water samples received through the state's free testing program, visit www.michigan.gov/flintwater.

How school sampling was conducted
To conduct this comprehensive sampling, the DEQ and Michigan Department of Licensing and Regulatory Affairs began on Oct. 23 with a thorough plumbing assessment of the school to gain a comprehensive understanding of how water moves through the building and what types of plumbing materials are used. The assessment also identified 31 faucets or fountains in the school that provide water for drinking, cooking and/or food preparation.

On Oct. 24, the DEQ and DLARA took four, 125-milliliter samples from each of the 31 identified faucets and fountains. The first two samples were taken immediately after turning on the faucet, followed by a 30-second flush and then the third sample, followed by a 2-minute flush and then the fourth sample. These samples provided information on the impact of any lead sources in or around each specific faucet and fountain as well as its connecting plumbing.

On Oct. 31, the DEQ and DLARA took an additional 30 samples, 10 each from three sites in the school. These 1-liter samples were taken consecutively, and provided information about the impact of any lead sources deep in the building's plumbing.

Talking points on today's data release
b

Talking Points on Freeman Announcement

Q: How do we describe the home tests?

A: The home tests are a surveillance-level screening tool. It is the same test used by the state to comply with the federal Lead and Copper Rule.

Q: SO, a safe reading doesn't mean my water is safe?

A: A low reading means there are no fixture-related issues. This screening may not catch impacts of a lead service line to the home. If a homeowner isn't sure whether they have a lead service line, the best way for homeowners to be absolutely sure is to have a certified plumber inspect their home.

Q: Does home plumbing inspection mean they dig up my yard?

A: Usually, no. A good plumber can usually assess the service line from the point of entry to the home.

Q: Was the inspection of the schools done with a different kind of testing? If so, how so?

A: Yes, the testing at the schools is a very thorough protocol designed to first determine if there are fixture-specific issues, then look deeper into the system to identify possible lead plumbing issues.

Q: What was learned by the testing at Freeman Elementary?

A: We identified 9 of 31 sites where the plumbing clearly was imparting lead into water. Importantly, we did repeated draws of the water at these spots over several minutes, and saw lead levels drop dramatically. This means the lead is in the fixtures, not in the water lines. It means the fixtures need to be addressed in some way – flushing for several minutes will help, but replacement of these fixtures offers a more permanent solution. And it means the water at Freeman is safe at 22 of the 31 sites inspected, which is of some reassurance to school officials.

Q: The City is now using water from Detroit. When will the water be free from lead again?

A: The water from Detroit is treated with phosphates, which coat the insides of lead home service lines and will reduce lead impacts. The City also will be adding additional phosphates to develop this coating more quickly, but it could take months for corrosion control to be achieved throughout the system. It is important to note that, even in systems where optimal corrosion control exists, lead components in home plumbing can still cause lead exposure. Removing lead from home plumbing is the only permanent solution to address lead in home water supplies. And testing is the best way to get an accurate sense of one's exposure. In Flint, blood testing for children is free, and surveillance testing of water for any resident also is free.

Reply-To: <news@bankolethompson.com>

Karen Weaver, Newly Elected Mayor of Flint to Appear for Exclusive Interview on 'Redline with Bankole Thompson,' Thursday, Nov. 12, 11am on WDET-101.9FM- Detroit Public Radio

Detroit, MI, Nov 12- Dr. Karen Weaver, the new mayor of Flint, a majority African American city where tests recently showed the Flint River water residents have been using for cooking, drinking and bathing for the past 18 months was contaminated with lead, will appear tomorrow at 11am on "Redline with Bankole Thompson," on WDET-101.9FM for an exclusive interview.

Weaver wants Flint to be declared a national disaster after local officials and the Michigan Department of Environmental Quality failed to use the appropriate test protocols to detect lead in the water customers have been using.

Thousands of customers including pregnant women, seniors, school going children have been drinking the contaminated water that an independent research team from Virginia Tech confirmed has lead in it.

Weaver is the latest guest to appear on the weekly broadcast http://wdet.org/shows/redline/ which has become a mainstay for inclusive and racially diverse conversation on issues. Redline has netted some significant guests in broadcast interview whose appearance on the Detroit program was their first time on WDET.

Weaver is also the subject of Bankole Thompson's weekly Thursday column in The Detroit News coming out tomorrow, where she granted her first extensive media interview since winning in last Tuesday's election.

Subject: RE: request for comment on congressman's letter

1. The Governor's 10-point plan for Flint recognizes the need to address lead service lines. We agree with Congressman Kildee and intend to work with the City of Flint, utilizing MI's Revolving Loan Fund program. We appreciate Congressman Kildee getting clarification from EPA that this money can be used for lead service line replacement. In fact, we've been working with Sen. Ananich and other legislative leaders to get these funds available to perform lead service line replacement.

2. The Governor's action plan addresses lead education and lead exposure. We will continue working with the city to educate its citizens and we will be making our lead exposure data available and take actions necessary to minimize risk to Flint residents from lead.

3. We appreciate the partnership between the state and local government to address the switchover to Detroit water. The State of Michigan, with support from the Legislature, provided $6 million in an agreed-upon plan with the City to contribute half of the necessary funding. Of the $6 million local half, it is important to remember the Mott Foundation provided $4 million. We want to recognize and sustain the partnership.

4. We look forward to the congressman's continued leadership to deliver federal resources to this issue.

November 13, 2015

Governor Rick Snyder
Executive Office of the Governor
P.O. Box 30013
Lansing, Michigan 48909

Governor Snyder:

I would like to provide you an update with some of the work we are doing in response to your letter on October 2, 2015 letter. I also have three requests of the state that are necessary to provide relief to the victims of the Flint water crisis.

First, Senator Stabenow, Senator Peters and I wrote a letter to the U.S. Environmental Protection Agency (EPA) asking for clarification on whether federal law permits states to use Safe Drinking Water State Revolving Funds (Revolving Funds) to finance the replacement of privately owned lead water service lines (attached). The EPA responded that the Revolving Funds can in fact be used for this purpose. My office immediately notified both your office and the Michigan Department of Environmental Quality of this fact.

Secondly, the three of us also wrote to Secretary Tom Vilsack requesting that the U.S. Department of Agriculture (USDA) provide greater clarification on the availability of "Ready to Feed" formula for recipients of Special Supplemental Nutrition Program for Women, Infants and Children (WIC) in Flint. Additionally, the letter asks to identify resources to improve the nutrition of Flint residents specifically as it relates to lead, because a certain diet can reduce some of the impact of exposure. The USDA is currently reviewing the letter.

Third, I have been working with the EPA on important revisions to the Lead and Copper Rule that would prevent a public health crisis like the one in Flint from happening again in other communities. I will be providing testimony at a meeting of the National Drinking Water Advisory Council next Wednesday, November 18 on what we have learned firsthand in Flint and the necessary improvements to the Lead and Copper Rule.

I will continue to pursue all of these avenues in order to find assistance for the people of Flint. There are, however, additional steps that need to be taken to remediate the damage done to the people of Flint due to the failures at the state government level, alongside the forgiveness of Flint's Revolving Funds loan debt if that becomes available. I urge state and local partners to work in coordination to fulfill the following requests.

- First, I request that the state of Michigan use its Revolving Funds and other state resources such as the rainy day and general funds to repair the damage done to Flint's water distribution system.

Due to the corrosive nature of the water, conservative estimates show there has been hundreds of millions of dollars of damage done to Flint's water distribution system. The damage to the system will increase maintenance costs resulting in higher rates for Flint water users, who already are burdened by the highest water rates in the state. Furthermore, the presence of over 15,000 lead service lines continues to threaten the quality of the water and creates the potential for future lead exposure through drinking water. As stated previously, the EPA has said that using the Revolving Funds for this purpose is allowed under federal law, and I request the state do so.

- Second, I request the state create a fund for ongoing assistance to the people of Flint to respond to the impacts of lead exposure.

The effects of lead are serious and permanent, with especially harmful impacts on young children and those with weakened immune systems. In discussions with health professionals, they have expressed the need for significant investments in the local health system in order to respond to the widespread exposure of lead to the people of Flint, including monitoring of future lead exposure. This fund should include support for, at a minimum, continuous health monitoring, early education programs, nutrition education, support services for children to succeed in school, and continued exposure prevention efforts. The investments we make now to combat the negative impacts of lead exposure will pay dividends in avoided costs in the future.

- Finally, I again ask that the state immediately reverse course and rescind Flint's obligation to provide $2 million for the cost of connecting to the Detroit water system and refund any money the city of Flint has had to pay.

Requiring a financially distressed city and its people to pay for the state's failures is an abdication of clear responsibility by the state. The state-appointed emergency manager was in charge of the city of Flint during the time that the decision to leave the Detroit system was made. The state – not Flint – created this water crisis, and the state needs to pay to fix it. The $2 million Flint spent to reconnect to the Detroit water system could be used for many other essential services in Flint, such as hiring policemen and firefighters, improving schools and maintaining parks.

In addition to state investments, I encourage the state to request assistance from federal agencies. They have extensive experience working with health, education and nutrition systems nationwide and could provide critical resources to state officials. Specifically, the Centers for Disease Control and Prevention has offered resources if the state requests it. I will work to support any efforts for federal assistance the state makes.

I look forward to working with the state and federal governments to not only provide clean drinking water to the people of Flint immediately, but also repair the damage done to the city's water system and give local health professionals the resources they need to combat the long term impacts of lead exposure.

Sincerely,

Dan Kildee
MEMBER OF CONGRESS

Hi there Jacob –

Sure- and to be clear, we still haven't been served yet so can't comment on specific details.

What would say is that we're focused on moving forward and ensuring public health and clean, safe drinking water. The governor has outlined a detailed multiple step action plan for both immediate, mid and long term. He has also appointed a task force doing a very important job of reviewing all past actions. They are a bipartisan group of people of the highest integrity, experts in their fields and widely respected who are going to do a very thorough, objective review.

Just let me know if anything more needed at all. This is for comment on behalf of Governor and rest of our administration too.

Thanks and best,
SW

Importance: High

All—

Please see below from Egan. This is essentially the same "?" Nancy Kaffer asked of Jeremy a couple weeks back. Intend to say something along the lines of the following…please advise.

The Tucker-Young report offered an initial perspective on the situation, but as additional information was received and considered by the city, city officials determined that KWA offered the best long-term solution for Flint. As has been noted previously, all involved, the mayor and city council, believed the move to KWA was appropriate and supported the move.

As we have discussed previously, consideration of the development of a Flint-area/Genesee County water system had been on-going since the early 2000's and the City of Flint had been in discussions about joining a new system for much of that time.

Subject: Flint water

Terry attached is the City of Flint Water Supply Assessment, a February 2013 study commissioned by the state treasurer and carried out by Tucker, Young, Jackson, Tull Inc.
Why did the state and city opt to split with DWSD and go with KWA when this study found it would be more costly to do so?

(From p. 17) "Based on the analysis, it is prudent to assume the KWA water supply option costs would be somewhere between the KWA-1 and KWA-2 options. Therefore, the analysis indicates that the two DWSD options of supplying 8 MGD on a maximum day and up to 8 MGD on average are the least cost options for Flint. These options allow Flint to maximize the use of existing assets; the City of Flint's (the Flint WTP) and DWSD's (the existing 72-inch main)."

1. INTRODUCTION

Tucker, Young, Jackson, Tull, Inc. (TYJT), at the request of the State Treasurer performed an analysis of the water supply options being considered by the City of Flint. The City of Flint is presently supplied potable water from the Detroit Water and Sewerage Department (DWSD). This supply is from a single 72-inch water main that terminates at a master meter located at Potter and Baxter. Additionally, downstream of the DWSD master meter, Flint supplies its customer Genesee County. The City of Flint also operates a water treatment plant that uses the Flint River as its source of supply to provide back up and redundancy to the DWSD supply as required by MDEQ

The Karegnondi Water Authority (KWA) is planning on constructing a raw water supply system that could provide Lake Huron water to the Flint Water Treatment Plant. Flint's existing plant would be upgraded to treat the new raw water source.

The State Treasurer has appointed an emergency financial manager for the City of Flint. As such the Treasurer has requested TYJT to provide an analysis of the water supply options to assist the Treasurer in determining any potential risk and the best course going forward for supplying potable water to the City of Flint.

Report Organization

The following sections of this report are described below:

Section 2 – The basis of the analysis is described in this section. The options include the KWA option and several options offered by DWSD.

Section 3 – A significant amount of information and data was collected including memorandums, reports, drawings, financial reports, and other documents. This section summarizes the information used in the analysis.

Section 4 – This section describes the evaluation of the cost of supply for the Flint options. The costs are comprised of the initial cost of operations plus the annual rate of escalation/inflation.

Section 5 – The evaluation process used to analyze the construction costs associated with the KWA supply system is described in this section. Additionally, the cost of financing the capital requirements is described.

Section 6 – This section presents the financial review of the options considered to supply potable water to Flint. A summary of these options is also provided.

Section 7 – In addition to the financial analysis other considerations were identified that should be considered in understanding the risks and determining the best option to supply Flint. They include items related to cost, redundancy and reliability, and Flint's ability to control their future cost of water supply.

2. FLINT WATER SUPPLY OPTIONS

Two water purveyor options were evaluated; the KWA water supply system and continued supply from DWSD. Both suppliers would provide water from Lake Huron as the source. The KWA system is a raw water supply, which means that the water would have to be treated by Flint before distributing the potable water to its customers. The DWSD supply is potable or "finished" water and would not need additional treatment.

Additionally, an option for the Flint WTP to supply the City of Flint without being supplied from either DWSD or KWA was initially considered. The preliminary investigation evaluated the cost associated with the required improvements to the plant and to the Flint River dam system. Although it appeared that this was a viable option, Flint in a meeting on December 20, 2012 with the Treasury, stated that the City did not want to pursue the option and it is no longer being considered.

Karegnondi Water Authority (KWA) Lake Huron Water Supply

The KWA water supply system schematic is shown in Figure 2-1. The system is comprised of an intake in Lake Huron that supplies water to the Lake Huron Pump Station (LHPS). The LHPS lifts the water and pumps it through an approximately 22 mile long 60-inch pipeline. The pipeline terminates at a 5 MG reservoir and is then pumped from the Intermediate Pump Station (IPS) through approximately 26 miles of 60-inch and 18 miles of 30-inch pipeline to the existing Flint WTP. Downstream of the IPS, approximately half way to the Flint WTP, the 60-inch line would also supply a new Genesee County WTP.

The raw water transmission system has a 60 MGD capacity and is sized to deliver a maximum of 18 MGD to the Flint WTP with an average day supply of 12 MGD. Improvements at the Flint WTP would also be required to treat the lake water as the plant is currently designed to treat the Flint River water.

The term of the KWA contract for Flint is 40 years.

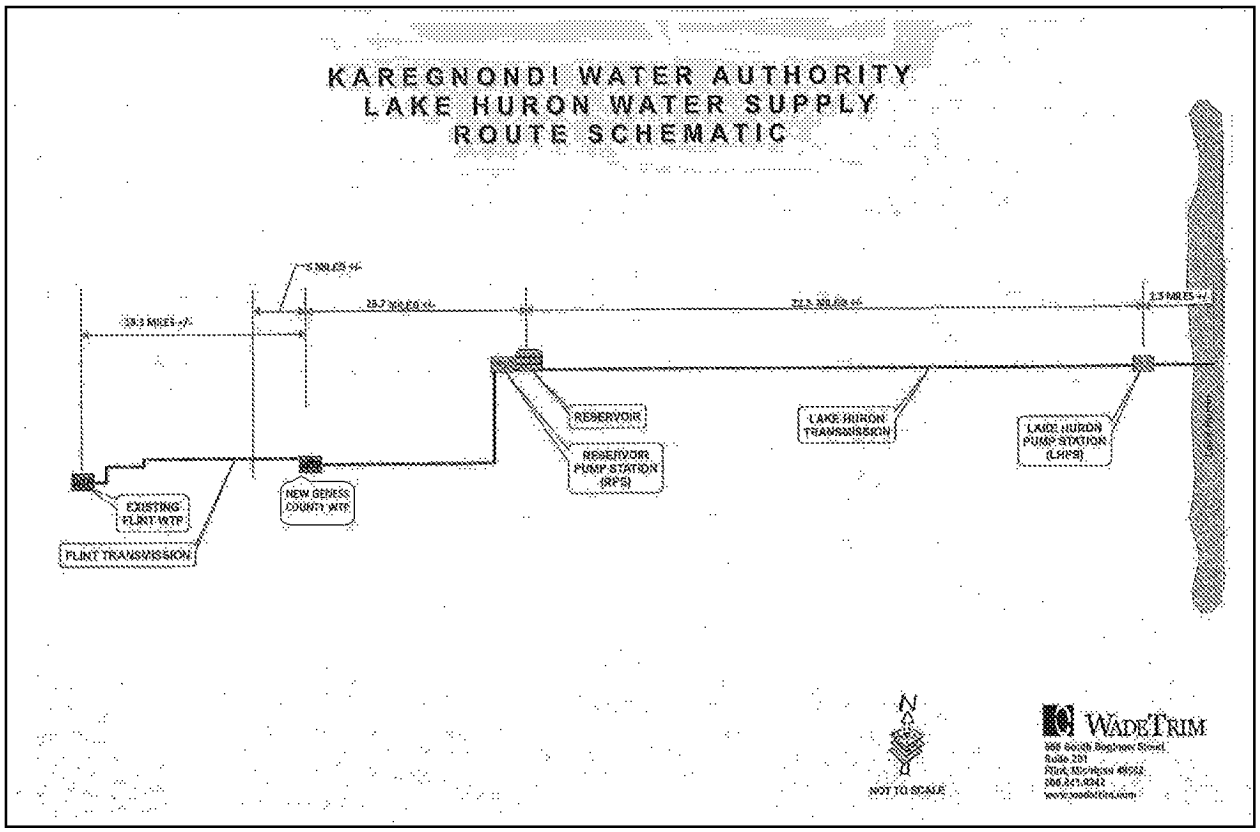

Figure 2-1: KWA Raw Water System

DWSD Water System

The DWSD system schematic is shown in Figure 2-2. Flint is currently supplied by DWSD at Master Meter FL-1, located at Potter and Baxter. Flint typically gets its water from the Lake Huron WTP, located in Fort Gratiot, Michigan; near the Lake Huron shoreline. Water is treated and pumped at the Lake Huron WTP and supplied through a 120-inch pipeline to an intermediate pump station called the Imlay Pump Station. The Imlay Pump Station has 20 MG of reservoir capacity. Depending on the time of year and the DWSD system demand, water is either bypassed directly to Flint or it is re-pumped at Imlay. It should be noted that the DWSD supply to Flint is part of a very large water system and during emergencies or outages water can be supplied from the south up to Flint in lieu of the Lake Huron facility.

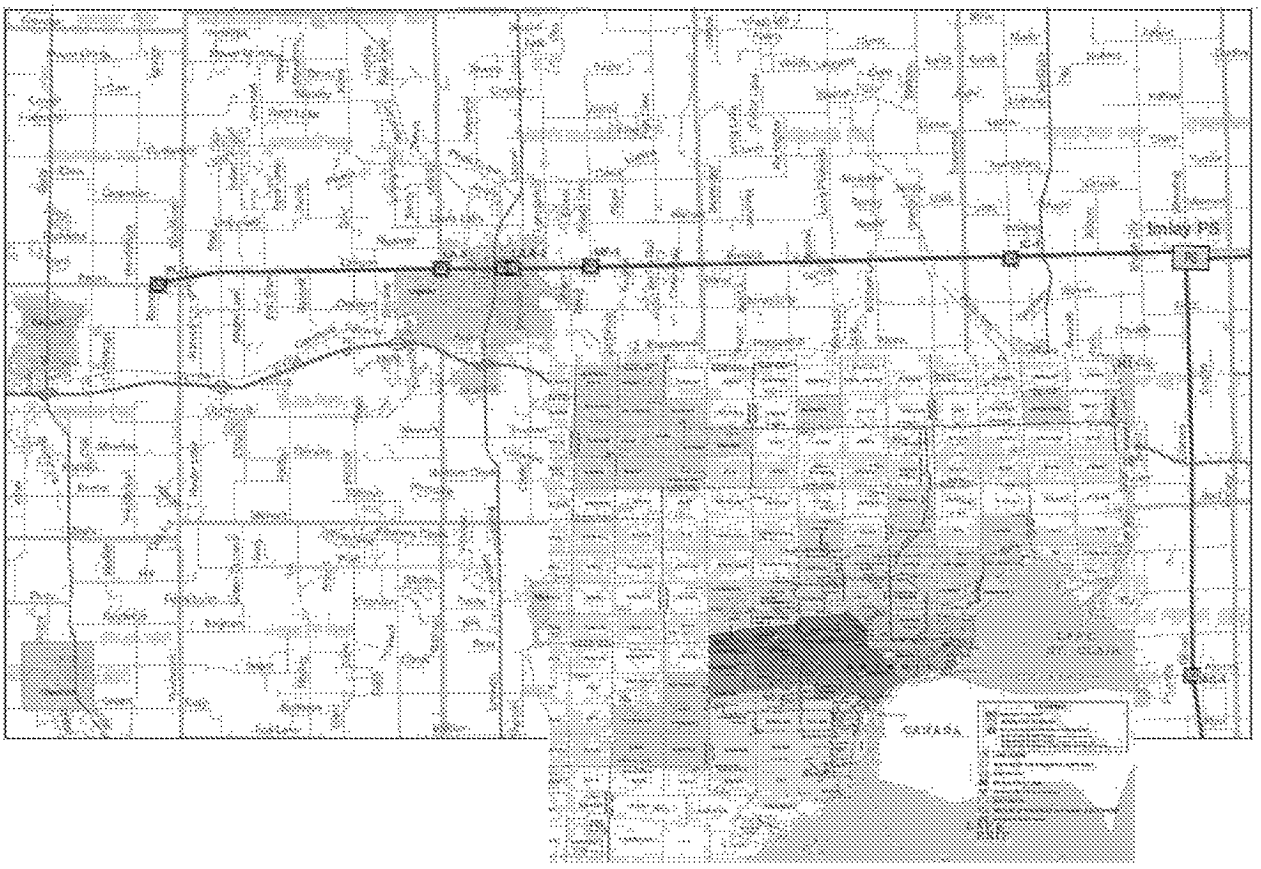

Figure 2-2: DWSD Water System

The pipeline from Imlay to FL-1 is a 72-inch pipeline. It has been estimated that the 72-inch line serving Flint has a capacity in excess of 90 MGD.

DWSD has presented several contractual options to Flint and all of them are based on Flint signing a new 30 year contract. The options shown in Table 2-1 are based on two different supply points; one at the current master meter location FL-1 at Potter and Baxter (P&B) and the other at the location of the Imlay Pump Station. The reason for the varying options is to provide a lower water rate at the Imlay Station, since the DWSD rate formula is based on distance and elevation factors related to the supply location.

The rates are also dependent on the maximum amount of water DWSD supplies. As example, if DWSD supplies a maximum day demand of 18 MGD that would equal the entire amount of water required by Flint.

For the options less than the maximum of 18 MGD means that the Flint WTP would supplement the difference by supplying water treated from the Flint River. These options are known as "blending" and would allow for Flint to blend two sources of water to supply its customers; the Flint River using the Flint WTP and Lake Huron from DWSD system.

Description	Average Day Demand
18 MGD Maximum Day Customer – FL-1	12 MGD
12 MGD Maximum Day Customer – FL-1	8 MGD
8 MGD Maximum Day Customer – FL-1	8 MGD
12 MGD Maximum Day Customer - Imlay	12 MGD
8 MGD Maximum Day Customer - Imlay	12 MGD

Table 2-1: DWSD Supply Options

3. DATA COLLECTION

During the course of the investigation several documents were used to perform the analysis. The names of the documents are listed below for reference.

KWA and Flint

- Preliminary Engineering Report, Lake Huron Water Supply Karegnondi Water Authority, September 2009;
- Analysis of the Flint River as a Permanent Water Supply for the City of Flint, July 2011;
- Cost Comparison, KWA vs. DWSD, Letter to Mr. Kurtz, October 31, 2012;
- Lake Huron Supply Study, KWA, Appendix 20, October 2012 Preliminary Report Update, Final Report (DRAFT), October 4, 2012;
- Articles of Incorporation of Karegnondi Water Authority, endorsed in 2010;
- Karegnondi Water Authority Bylaws, October 26, 2010;
- KWA Raw Water Supply Contract;
- Flint WTP Statement of Revenues and Expenditures 09' – 12';
- GCDC Division of Water and Waste Services Financial Statements 03' – 11'; and
- Assorted emails with further clarification of questions and documentation.

DWSD

- Historical Rates and Charges to Flint 04' – 13';
- Historical Rates and Charges to Flint with Hypothetical Model Contract 10' – 13';
- 2013 Rates and Charges for the following options:
  - 18 MGD Maximum Day Customer at FL-1;
  - 12 MGD Maximum Day Customer at FL-1 (Flint blending*);
  - 8 MGD Maximum Day Customer at FL-1 (Flint blending*);
  - 12 MGD Maximum Day Customer at Imlay (Flint blending*);
  - 8 MGD Maximum Day Customer at Imlay (Flint blending*); and
- Assorted emails with further clarification of questions and documentation.

* Flint blending based on DWSD supplying two-thirds and Flint one-third of 12 MGD average day demand.

Two meetings were also held; one with DWSD and one with Flint and Genesee County representing KWA. The meetings were held on November 19, 2012 and November 20, 2012, respectively. Minutes from these meetings are included in Appendix A.

4. COST OF SERVICE

Information provided by DWSD, Flint, and representatives of the KWA were used in the cost of service evaluation. To evaluate the annual escalation/inflation rate over the planning period, the rate adjustment for DWSD was estimated based on the recent rate adjustment history. For the KWA system both the estimated cost of operations when the system begins supplying water and the annual rate adjustment or inflation was evaluated. The existing cost of operations and escalation for the Flint WTP was based on actual costs provided and then adjusted depending on the scenario considered. This section describes the evaluation process and the rates used in the analysis.

DWSD Water Supply

The City of Flint has been a customer of DWSD since 1967. The Flint WTP has been maintained as a backup to the DWSD system. As indicated previously, several options were provided by DWSD depending on the type of service Flint was to select. The unit cost of water for each of these options is shown in Table 4-1. These rates are based on DWSD's FY13, which are current until July 2013.

Description	Average Day Demand (MGD)	Unit Rate ($/MG)
18 MGD Maximum Day Customer – FL-1	12	16.37
12 MGD Maximum Day Customer – FL-1	8	16.31
8 MGD Maximum Day Customer – FL-1	8	12.68
12 MGD Maximum Day Customer - Imlay	12	14.38
8 MGD Maximum Day Customer - Imlay	12	11.11

Table 4-1: Cost of DWSD Supply Options

To determine annual escalation rate, DWSD's last 10 years of history was used along with other large urban water systems in Michigan. The water systems used for benchmarking comparison were: Lansing, Grand Rapids, and Saginaw.

Table 4-2 identifies the annual and average rate of increase to Flint based on supplying water either to the current FL-1 at Potter and Baxter or Imlay. Note the last three years of the rates (FY 2011 through FY 2013) assumes that Flint's cost would be based on the new 30 year contract; FY 2011 being the first year that the new contract was available.

Fiscal Year	Average Unit Cost ($/MCF)	Annual Change (%)
2004	11.06	
2005	10.24	-7.4
2006	10.56	3.1
2007	11.09	5.0
2008	11.35	2.3
2009	13.07	15.2
2010	11.73	-10.3
2011	13.89	18.4
2012	15.08	8.6
2013	16.24	7.7
Average		2.4%

From FL-1

Fiscal Year	Average Unit Cost ($/MCF)	Annual Change (%)
2004	11.06	
2005	10.24	-7.4
2006	10.56	3.1
2007	11.09	5.0
2008	11.35	2.3
2009	13.07	15.2
2010	11.16	-14.6
2011	12.23	9.6
2012	13.28	8.6
2013	14.32	7.8
Average		2.9%

From Imlay

Table 4-2: Recent DWSD Water Rates

Audited financial reports were used to determine the rate of inflation associated with other three large municipal systems. The results are shown in Table 4-3.

Water Systems	Years Evaluated	Average Rate (%)
Lansing	05'-12'	4.6
Grand Rapids	04'-11'	1.6
Saginaw	04'-11'	7.0

Table 4-3: O&M Inflation Rates of Other Large Water Systems

Based on the information analyzed from DWSD and the other communities, it was determined that a fair annual rate of inflation for operations and maintenance cost for the analysis should be 4.4%. The 4.4% has historical significance from Flint's current water supplier and falls within the range of the other communities.

KWA Water Supply

The initial projected O&M cost for the KWA supply would be comprised of KWA's O&M costs as well as Flint's O&M costs. Because there was limited information provided, the initial estimated rate of $1.50/MCF was used. This rate is based on information from the cost comparison analysis attached to the letter to Mr. Kurtz, dated October 31, 2012.

The KWA cost evaluation used an annual O&M inflation rate of 5%. To validate this rate a similar analysis to DWSD's operations and maintenance annual rate of inflation was used. First, in discussions with Flint and the Genesee County Drain Commission (GCDC), they believed that the annual rate of inflation for the new KWA system would be similar to the GCDC Water & Waste Services (WWS). Additionally, two large transmission systems were used to benchmark the inflation rates: the Southeastern Oakland County Water Authority (SOCWA) and the Ypsilanti Utility Community Authority (YUCA). Although both of these systems transmit finished water opposed to raw water, they were considered similar enough for comparison as they are comprised of only large water mains, pumping facilities and storage.

Once again audited financial statements were used to calculate the inflation rates. A summary of the findings are shown in Table 4-4. Based on the fact that the information analyzed showed a large difference between the two systems, it was determined that the KWA assumption of 5% was a good rate of inflation to use in the financial analysis. This rate is almost equally between the GCDC rate and the other two transmission systems.

Systems	Years Evaluated	Average Rate (%)
GCDC WWS	03' – 11'	10.5
SOCWA	04'-12'	--
YUCA	04'-12'	0.7

Table 4-4: O&M Inflation Rates of Other Comparable Systems to KWA

Flint WTP

The Flint WTP currently serves as a backup supply to the DWSD service to Flint. To maintain backup operations, the City of Flint operates the plant approximately 20 days each year. Flint indicated that the average production rate when they operate is 11 MGD.

For the blending options and the KWA supply considered, Flint would be required to operate its plant all year around. Therefore, their operating and maintenance costs were evaluated and adjusted to determine an annual cost associated with year-round operations.

The Flint WTP provided three years of operating costs for the assessment. Additionally, reports listed in Section 3 were also used as reference to determine both operating costs for the plant processing Flint River water (blending options) and Lake Huron raw water (KWA option).

Major cost centers were analyzed to estimate annual operation and maintenance. They included: labor, utilities, chemicals and residual management. In general, as recommended by the Flint plant staff, labor and overhead were increased from the current costs by two-thirds. Additionally, variable costs for power, chemicals and residual cost were increased to estimate full time treatment at the Flint WTP. Data from the KWA Preliminary Report and annual operating data for the Flint WTP (provided separately) were analyzed to make these forecasts.

The annual operating and maintenance costs developed for Flint WTP used are shown in Table 4-5.

Source of Supply	Average Daily Production (MGD)	Estimated Annual O&M Cost
Flint River (Blending with DWSD)	4	$5,895,097
Lake Huron (Supplied by KWA)	12	$7,913,118

Table 4-5: FY 13 O&M Costs for Year-round Operations

It was determined that a fair annual rate of inflation for operations and maintenance cost for the Flint WTP plant should be 4.51%. The 4.51% is an average of Lansing, Grand Rapids and Saginaw facilities.

.

5. CAPITAL REQUIREMENTS

Large capital investments would be required by Flint and GCDC to construct the KWA supply system. Furthermore, some of the options presented by DWSD (supply point from Imlay) would require the purchase by Flint of DWSD's 72-inch water main. Performing the financial analysis; therefore, required an analysis of the KWA construction cost estimate for the transmission system and Flint WTP improvements.

Revenue bonds were also identified as the source of financing the new supply system and associated improvements. This section describes the assumptions made and the interest used for financing the improvements.

KWA Supply System

The most current cost estimate of the KWA system was presented in the document titled; Lake Huron Supply Study, KWA, Appendix 20, October 2012 Preliminary Report Update, Final Report (DRAFT), October 4, 2012. The cost of construction is estimated at $272,421,558. Flint's portion would be 30% or $81,726,467.

Due to the significance of this expenditure, a detailed review of the cost was performed and is presented in this section. The analysis was performed based on the main elements of the supply system: the lake intake, the two pumping stations, and the transmission pipeline. Additionally, an analysis was performed related to construction contingencies and other costs such as engineering, legal, and administration.

Lake Intake

KWA representatives indicated in a meeting in November that the design documents for the intake were at 90% and that it was planned for advertisement in January 2013. A summary of the estimate is shown in Table 5-1.

Description	Estimate
Intake and Crib	$22,076,850
ELAC at 25%	5,519,213
Property	2,300,000
Total	**$29,896,063**

Table 5-1: KWA Intake Cost Estimate

Based on the evaluation, it appeared that the cost estimate was reasonable. Given that the design was nearly complete, the engineering, legal, administration, and construction contingencies (ELAC) at 25% were also found to be appropriate.

Pumping Stations

KWA representatives indicated that the pump stations were estimated at a level of design less than 15%. Therefore, in addition to an evaluation of their cost estimate, other water pumping station costs were used for comparison. Additionally, contractors were also contacted for costs. Table 5-2 summarizes the KWA cost estimate compared to our cost estimate performed for the Treasury.

Description	KWA	Estimate	TVA	Estimate
Pumping Stations		$24,618,080		$54,573,314
Land for Intermediate Pump Station and Reservoir		--		75,000
Subtotal		$24,618,080		$54,648,314
ELAC for Construction	25%	6,154,520	30%	16,394,494
Total		**$30,772,600**		**$71,042,808**

Table 5-2: Pumping Stations Cost Estimate

Two things to note regarding the difference in the cost estimates; firstly, there is a large difference in the cost estimates of the pumping stations. The estimate developed for the Treasury used several other pumping stations construction costs from Southeastern Michigan and discussions with contractors. These costs were then computed on a $/MG's for comparison.

Secondly, our estimate for the Treasury is based on an ELAC of 30% instead of KWA's 25%. Although 25% was acceptable for the intake, it is believed to be too low for the pumping station estimate given that the engineering effort is less than 15%.

Transmission Main

Although the specific route for the transmission main was not provided, an estimate was calculated based on the general information provided. Once again, the KWA estimate was based on a level of design less than 15%. The estimate performed for the Treasury used the line items provided by KWA for the pipeline and also consulted with contractors to evaluate the cost of construction. The comparison is shown in Table 5-3.

Although the cost of construction of the pipeline is similar, a value of 30% was used for ELAC due to the level of design. Additionally, KWA did not believe there would be any additional costs for easements; however, this did not seem practical. Therefore an estimate for acquiring the easements was added to the Treasury estimate and is based on the 277 easements identified by KWA. The cost shown includes surveying, legal, engineering, administration, etc.

Description	KWA	Estimate	TYJT	Estimate
Transmission Mains		$166,202,316		$167,419,530
ELAC for Construction	25%	41,550,579	30%	50,225,859
Subtotal		$207,752,895		$217,645,389
Easements		--		1,166,170
Total		**$207,752,895**		**$218,811,559**

Table 5-3: Transmission Pipeline Cost Estimate

Other KWA Costs

In prior estimates of the construction cost, KWA used an ELAC of 37%. In this case it could be considered that the engineering effort associated with the design would have been included. However, it is believed that KWA's reduced ELAC of 25%, does not include the design effort. Additionally, it would be prudent to assume that the owner would want a construction manager during construction of this large project. A summary of these costs are shown in Table 5-4.

Description	Estimate
Design Engineering for Pumping Stations and the Transmission Pipeline	$16,939,581
Construction Management at 5%of Project Cost Estimate of $217,645,389	14,434,609
Administration	349,440
Legal, Easements, Contract Documents	831,000
Total	**$32,554,630**

Table 5-4: Other Costs

Summary Comparison

A summary of the two cost estimates are shown in Table 5-5. Based on the comparison, the estimate performed by TYJT shows a higher cost to Flint by approximately $25,000,000.

Note that there are two other costs shown in the summary that were not previously addressed; power and backup power. Regarding the cost of providing power to the pumping facilities, the cost of $4,000,000 appears reasonable.

The KWA has repeatedly indicated that backup power is not needed. Backup power is a standard practice in the water industry. Furthermore, a loss of power at either pumping facility will prevent the supply of water to both Flint and Genesee County. For these reasons, the cost of providing backup power was included in our estimate for the Treasury.

Description	KWA Estimate	TY/T Estimate
Intake/Crib	$ 27,596,063	$ 27,596,063
Pump Stations	30,772,600	71,042,808
Transmission Mains	207,752,895	217,645,389
Power	4,000,000	4,000,000
Redundant Power for PS		1,273,200
Land for Lake Huron Pumping Station	2,300,000	2,300,000
Design Engineering/PS and Transmission		16,939,581
Construction Management		14,434,410
Administration		349,440
Legal/Easement/Contract Documents		831,000
Easements		1,166,170
Total	**$ 272,421,558**	**$ 357,578,060**
Flint Share at 30%	**$81,726,467**	**$107,273,418**

Table 5-5: Total Cost Comparison

Flint WTP Improvements

The KWA analysis identified capital costs required to convert the existing WTP from river water treatment to treating lake water. The cost estimate was identified as $7,100,000 in the 2009 report. This number was used in the our analysis, since additional information was not provided. For the purpose of the financial analysis; however, the $7,100,000 was increased by 3% each year for three years to account for inflation.

DWSD Imlay Station Supply Options

The options identified by DWSD to supply service to Flint at the Imlay Pump Station would require Flint to purchase the 72-inch water main from Imlay to Master Meter, FL-1. The pipeline is approximately 25 miles long. The estimated cost provided by DWSD for estimating purposes is $4,700,000.

Financing

The cost of financing the revenue bonds for the capital work was investigated. Based on conversations with local financial advisors knowledgeable in bond financing, an interest rate of 5% for the 25 year

period was considered acceptable. This is based on a Standard and Poor's bond rating of A without insurance.

Additional costs associated with the bond include the reserve and bond issuance fee. The bond holders will require a reserve of approximately 10% of the loan to be held for the 25 year payment period. The cost associated with the bond issuance has been estimated at 2.25% of the principal borrowed for the KWA project and 3% for the smaller loan associated with the Flint WTP improvements or the purchase of the 72-inch main.

Furthermore, since no revenue will be generated to pay on the bonds for the first three years that the system is being constructed, the cost associated with capitalizing the interest was also included.

Finally, interest on the reserve will be provided back to KWA and Flint. Although the interest is currently less than 1%, it was determined that a 3% rate would be more prudent long-term.

6. FINDINGS

Using the information described in the previous sections, a cost evaluation was conducted for the KWA supply and the DWSD options. Individual worksheets for each option are provided in Appendix B. For the purpose of comparison a 30 year period was used. This period includes the 3 year construction period, the 25 loan period and an additional two years to get a sense of the cost of operation after the loans have been paid.

There were three separate cost sheets prepared for the KWA option. The first cost sheet (KWA) is based on the cost estimate provided by KWA. The costs provided assumed no overruns or delay in construction. With KWA's own assumptions of an overrun in construction of 15% and a one year delay in operations, the KWA estimated cost becomes $686,375,920 through Year 2042.

Since this cost estimate did not appear to include the financing of revenue bonds, another cost sheet (KWA-1) was developed that included KWA's cost estimate without overruns with the additional finance costs associated with the revenue bonds. A final cost sheet (KWA-2) includes the cost associated with the revenue bonds based on the estimate provided by TYJT for the Treasury.

A summary of the cost sheets provided in Appendix B are shown in Table 6-1. Figure 6-1 shows the cumulative annual costs associated with each option.

Option	Costs through 2042 ($)	Ranking by Cost
DWSD 8 MGD Maximum Day at Imlay Station	634,795,488	1
KWA *(10/31/12 No Overruns, As Provided)**	649,775,166	2
DWSD 8 MGD Maximum Day at FL-1	672,671,705	3
KWA-1 *(10/31/12 No Overruns with Cost of Financing)*	707,279,715	4
DWSD 12 MGD Maximum Day at Imlay Station	725,576,803	5
DWSD 12 MGD Maximum Day at FL-1	762,110,308	6
KWA-2 *(Treasury Estimate)*	766,784,313	7
DWSD 18 MGD Maximum Day at FL-1	821,226,268	8

* $686,375,920 with 15% overrun in construction and a one year delay in operations

Table 6-1: Total Cost of Options through 2042

Based on the analysis, it is prudent to assume the KWA water supply option costs would be somewhere between the KWA-1 and KWA-2 options. Therefore, the analysis indicates that the two DWSD options of supplying 8 MGD on a maximum day and up to 8 MGD on average are the least cost options for Flint. These options allow Flint to maximize the use of existing assets; the City of Flint's (the Flint WTP) and DWSD's (the existing 72-inch main).

Additionally, in recent conversations with the Treasury another option was discussed that could potentially be the most cost-effective solution. Currently the Flint WTP serves as a backup if service is

lost through either the DWSD or KWA pipeline. If the a twin pipe paralleling the DWSD 72-inch water main were constructed with interconnects with the 72-inch line, then the new water main could serve as the backup to Flint and the Flint WTP could be abandoned or potentially sold to Genesee County for their use.

The construction of the parallel pipeline would be considered in the DWSD capital expenditure as a Common to All (CTA) cost. This means that the capital cost of the pipeline would be shared by all DWSD customers and not just by Flint. Preliminary analysis of this option appears to be the most cost-effective of all the options discussed. However, a more thorough cost analysis is warranted and this approach would require an agreement between Flint and DWSD.

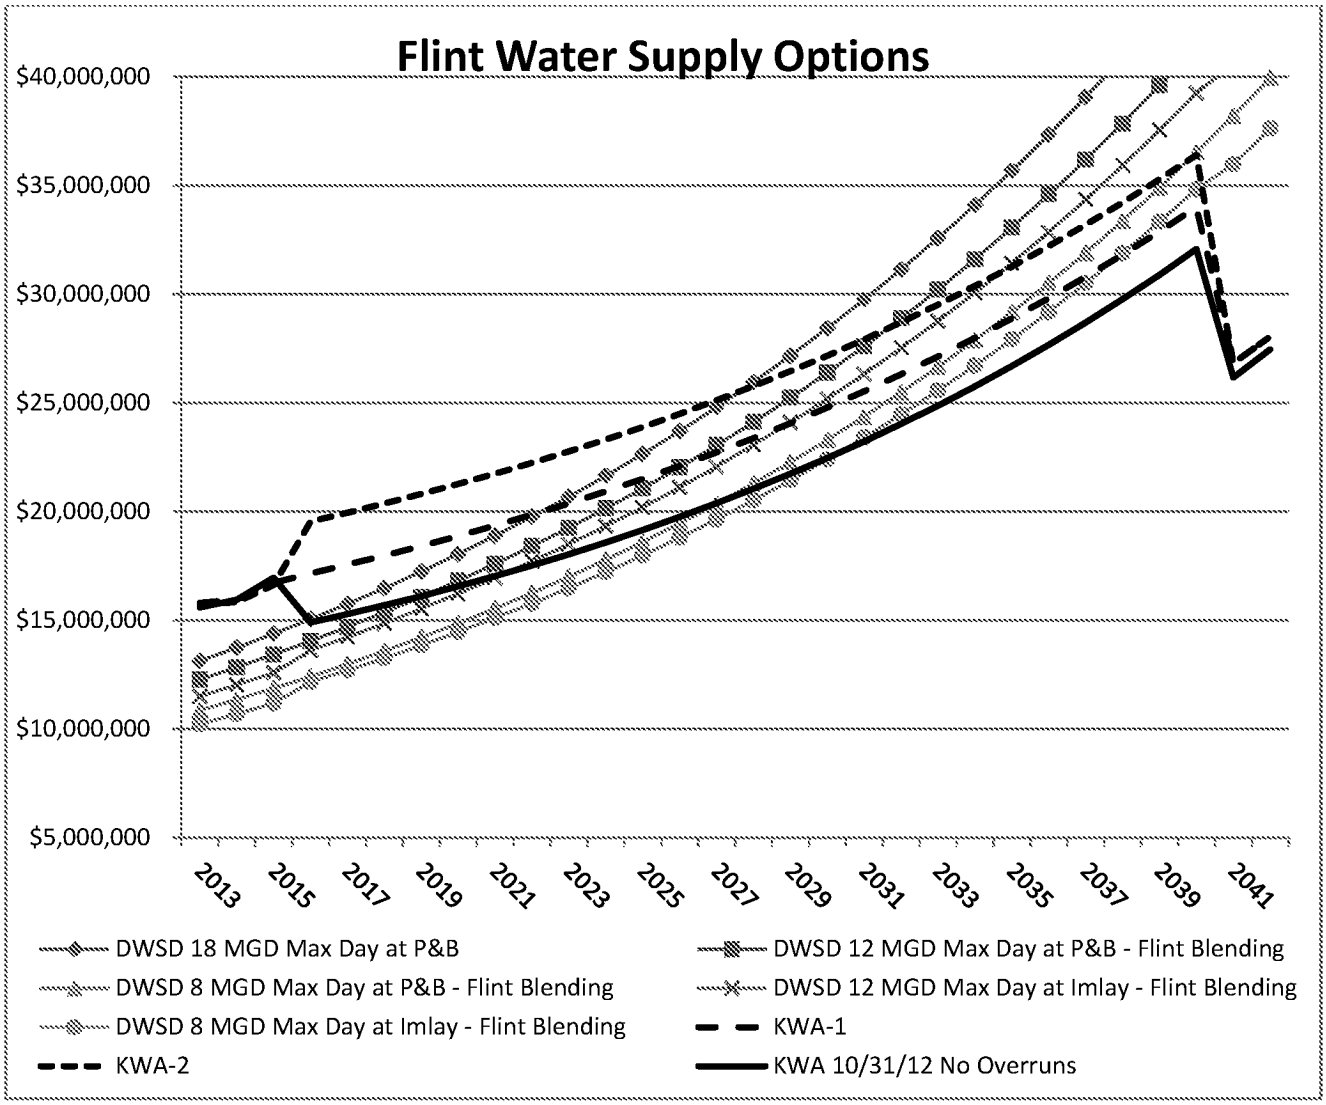

Figure 6-1: Flint Water Supply Options through 2042

7. OTHER CONSIDERATIONS

As part of the investigation other issues were identified that may result in risks to Flint that should be considered by the Treasury in determining how Flint's potable water should be supplied. These issues are related to redundancy and reliability, other items affecting cost, and Flint's desire to control its own destiny related to its water supply. These are described further below.

Redundancy/Reliability

In one of the first meetings related to this task assessment, which was held on November 1, 2012, the Genesee County Drain Commissioner, Mr. Jeff Wright, stated that one of the main reasons for pursuing the KWA supply option related to the lack of reliability of the DWSD system. He pointed to the Northeast blackout of 2003; a widespread power outage that occurred throughout parts of the Northeastern and Midwestern United States and Ontario, Canada, on Thursday, August 14, 2003. He stated that Flint and Genesee County were out of water for several days.

It is worth noting that this was a power outage of historic proportions that affected millions of Americans. However, DWSD did begin supplying water again relatively quickly in comparison to other major cities impacted by the same power outage.

Furthermore, the KWA supply system offers less redundancy to Flint than the current DWSD system. Under both options, Flint is supplied by a single pipeline; however, DWSD has backup power at all of its major facilities supplying Flint. The KWA system will not have a redundant power at its pumping facilities. This would be a major risk.

Currently, backup to the DWSD system for Flint is Flint's WTP using the Flint River as the source of supply. KWA has stated that the Flint River source would also be used as backup to Flint if the KWA supply through its pipeline was lost. However, since the Flint WTP would be upgraded to treat Lake Huron water under the KWA option, using the Flint River as a backup source would require the Flint WTP to maintain two process treatment streams.

In addition to Flint and Genesee County, the DWSD's 72-inch main supplies Imlay City, Mayfield and the Greater Lapeer County Utilities Authority (GLCUA). The volume of water contained within the 72-inch main is approximately 30 MG. Only supplying these three remaining communities would cause the water age to increase dramatically; somewhere in excess of three weeks old, before reaching the customers' master meters. Since the half-life of chlorine in the DWSD system is approximately 5 days, the chlorine would most probably be near zero requiring re-chlorination of the finished water upstream of the master meters.

Re-chlorinating is a costly and risky process due to the instability of chlorine gas. It is unknown whether DWSD would pursue this improvement or possibly abandoned the 72-inch pipeline.

If Flint is supplied by the KWA system, then DWSD supplying their other customers along the 72-inch water main may be reconsidered. Since the KWA system is a raw water supply, the communities would

either have to build a treatment facility to treat the water from KWA or find another water source for their communities.

Additional Cost and Risk Considerations

The design of the KWA supply and the construction of the system have not been completed; therefore, final costs and time to complete are unknown. Cost overruns and delays in completion will both negatively impact Flint's final cost. As example, if the project is not completed within the three year period, payment on the bonds will be due, but the revenue source needed from the sale of water could not be provided.

Furthermore, there is always a risk with large water system construction; especially those including an intake in the Great Lakes, pumping stations and rehabilitation of older water treatment plants. These risks include the potential of explosive gases in tunneling below Lake Huron, changing site conditions associated with the large number of miles of pipe installation and rehabilitating an older WTP, and the startup and debugging of the entire pumping system.

Flint has indicated that they have a high water loss. Not addressing this issue prior to sizing the Flint supply pipeline from KWA could cause the water main to be oversized along with its incremental cost in construction.

Also, the KWA supply option appears to run counter to the Treasury's Competitive Grant Assistance Program (Formerly EVIP Grant). This program has been put in place to allow for communities to consolidate their services and save money. Two existing customers of DWSD (Flint and Genesee County) along with the potential of others customers (GLCUA, Mayfield, Imlay City) separating to from another water system is in contradiction to the program.

Finally, there is a concern over the ability of smaller systems (KWA) over larger systems (DWSD) to pay for future unfunded mandates and regulations. Obviously, identifying regulation requirements over 30 years is hard to determine. However, it is widely accepted that a large system has greater ability to respond to unfunded mandates because the cost can be distributed over a large customer base.

Flint's Autonomy

Flint has indicated that a major point of consideration is that they have no control over the rate increases issued to Flint by DWSD. All other counties supplied by DWSD have representatives on the Board of Water Commissioners (BOWC). The BOWC is one of the governing bodies that approve the water rates. Since Flint and Genesee County do not have a representative on the BOWC, Flint believes they are held "hostage" to DWSD's rates and cost of service.

This issue was stated in Flint's handout at the November 1, 2012 meeting. The handout is titled, "Flint Water Supply Future." However, it is worth noting in the same handout, Flint also identifies similar concerns with the governing board of the KWA system. Notably, that although Flint and Genesee County will be the only customers and Flint will be responsible for 30 percent of the construction cost,

they will have a minority vote on the KWA board. Furthermore, there are other communities (Lapeer County, the City of Lapeer, and Sanilac County) that sit on the board and vote. However, they are not purchasing water nor contributing to the construction costs.

Dave Guastella, TYJT

DATE: November 24, 2012

PURPOSE OF MEETING: Meeting with DWSD for the Indefinite-scope, Indefinite-delivery Contract Number 00383, 2012 Professional General Architectural/Engineering Services – City of Flint Water Supply Assessment

PREPARED BY: Dave Guastella

A meeting was held at the DWSD Main Office Building on November 19, 2012 to discuss the water supply options being presented by DWSD to the City of Flint. The main items discussed generally followed the attached DWSD Discussion/Questions that were provided to the Department prior to the meeting. A summary of the key points discussed are provided below.

DISCUSSION ITEMS

1. Question/Discussion Item: Verify that the four options presented at the November 1, 2012 meeting are still available for consideration:

    a. Supplied from Potter & Baxter using the new model contract (assume a Maximum Day Customer),

    b. Supplied from Imlay Station,

    c. Finished un-pumped supply from Lake Huron WTP, and

    d. Raw un-pumped supply from Lake Huron WTP.

    DWSD prefers to focus on the first two supply point listed; from the current location at Potter & Baxter and at the Imlay Pump Station as these apply specifically to Flint.

    DWSD provided the attached summary regarding the current costs to Flint based on the various options that DWSD is offering. The savings associated with each option is provided as well. As example, if Flint were to purchase water from the supply point located at Imlay Station, the current cost to Flint would be $5,661,000 and it would be a savings of nearly 50%

Comments: Meeting minutes were recorded based on the understanding of the author. Please contact the author within three days if you have any different understanding of the meeting. These minutes will be considered approved unless comments are provided within three days.

compared to Flint's current rate.

2. Question/Discussion Item: What additional capital improvements will be required for each option?

   If Imlay Pump Station is selected as the supply point then Flint would need to purchase the 72-inch water main and an agreement to supply Lapeer would need to be worked out. DWSD believes that this could be worked out through a "wheeling" charge over the 72-inch main or possibly moving the supply point downstream of the Lapeer connection.. DWSD estimates the value of the water main at $4.7M. Flint could bond for this amount or DWSD could include the cost into Flint's rate.

3. Question/Discussion Item: Are there other options being presented that should be considered (e.g., blending)?

   Only the two options indicated above are currently being considered and both would include blending; DWSD providing 2/3 of the supply and the Flint WTP providing the other 1/3.

4. Question/Discussion Item: To evaluate each option over the 25 year planning period, provide:

   a. Annual water rate for Flint for 2002 through 2012, and the

   b. Projected annual rate adjustment for each option. What are the proposed measures to keep the rate adjustments down in the future?

   DWSD provided the attached historical rates from 2002 through 2012 for the existing water contract with Flint. The attachment also includes what the rates would have been if Flint had signed the new model contract or had taken service from Imlay. These rates were provided back to 2010.

   DWSD believes that 5% would be a good estimation to assume for their annual escalation in rates over the 25 year planning period.

5. Question/Discussion Item: Flint stated a 10% increase in the capacity charge. What number did DWSD provide Flint?

   It was unclear to DWSD where the 10% increase in capacity charge stated by Flint came from. DWSD's information provided shows an average of 6.3%. DWSD offered a meeting with TYJT to discuss how the fixed and commodity charges are allocated.

6. Question/Discussion Item: Flint financial comparison is based on the initial Cost of $14,413,858, which includes $2,725,538 for Flint WTP operating cost; i.e, DWSD charge is $11,688,320. How good is this number?

   DWSD indicated that the charge of $11,638,320 is good through 6/30/13.based on their existing contract with DWSD.

7. Question/Discussion Item: KWA's initial charge to Flint is based on 12 MGD. Is DWSD charge

based on 12 MGD?

Yes, 12 MGD from DWSD would be a maximum with Flint supplying 6 MGD for a total of 18 MGD (2/3 vs. 1/3).

Comments: Meeting minutes were recorded based on the understanding of the author. Please contact the author within three days if you have any different understanding of the meeting. These minutes will be considered approved unless comments are provided within three days.

CITY OF FLINT WATER SUPPLY ASSESSMENT

DWSD Discussion/Questions for the November 19, 2012 Meeting

1. Verify that the four options presented at the November 1, 2012 meeting are still available for consideration:
    c. Supplied from Potter & Baxter using the new model contract (assume a Maximum Day Customer),
    d. Supplied from Imlay Station,
    e. Finished un-pumped supply from Lake Huron WTP, and
    f. Raw un-pumped supply from Lake Huron WTP.
2. What additional capital improvements will be required for each option?
3. Are there other options being presented that should be considered (e.g., blending)?
4. To evaluate each option over the 25 year planning period, provide:
    g. Annual water rate for Flint for 2002 through 2012, and the
    h. Projected annual rate adjustment for each option. What are the proposed measures to keep the rate adjustments down in the future?
5. Flint stated a 10% increase in the capacity charge. What number did DWSD provide Flint?
6. Flint financial comparison is based on the initial Cost of $14,413,858, which includes $2,725,538 for Flint WTP operating cost, i.e DWSD charge is $11,688,320. How good is this number?
7. KWA's initial charge to Flint is based on 12 MGD. Is DWSD charge based on 12 MGD?

Comments: Meeting minutes were recorded based on the understanding of the author. Please contact the author within three days if you have any different understanding of the meeting. These minutes will be considered approved unless comments are provided within three days.

Summary of DWSD Cost Allocations to Flint Under Various Scenarios

Flint Only

	Revenue Requirement	Rates and Charges: Fixed	Rates and Charges: Commodity	Rates and Charges: Avg Unit Cost
1 **Status Quo**	11,461,700	357,271	12.46	19.91

DATE: November 24, 2012

PURPOSE OF MEETING: Meeting with the City of Flint for the Indefinite-scope, Indefinite-delivery Contract Number 00383, 2012 Professional General Architectural/Engineering Services – City of Flint Water Supply Assessment

PREPARED BY: Dave Guastella

A meeting was held at the City of Flint Municipal Center on November 20, 2012 to discuss the water supply option being presented by the Karegnondi Water Authority (KWA) to the City of Flint. The main items discussed generally followed the attached KWA Discussion/Questions that were provided to City prior to the meeting. A summary of the key points discussed are provided below.

The questions submitted are repeated in the Discussion Items for easy reference. A summary of the action items generated from the meeting follow the Discussion Items.

DISCUSSION ITEMS

1. Question/Discussion Item: Is the maximum day demand of 18 MGD for Flint the maximum day demand (MDD) throughout the 25 year planning period? If not, what is the 25 year projected MDD?

   KWA would supply up to 18 MGD. 18 MGD has been assumed as the maximum day demand and 12 MGD is assumed as the average day demand throughout the 25 year planning period.

2. Question/Discussion Item: Copy of the intake contract documents and engineer's estimate.

   The intake contract documents are approximately 90% complete and are not available for distribution. However, the updated Appendix 20, dated October 4, 2012 includes the most recent cost estimate of the intake based on the current design in process.

Comments: Meeting minutes were recorded based on the understanding of the author. Please contact the author within three days if you have any different understanding of the meeting. These minutes will be considered approved unless comments are provided within three days.

3. Question/Discussion Item: Documentation of the Flint WTP improvements required and cost estimate.

   The costs are approximately $7M as presented in the September 2009 Preliminary Engineering Report. However, this estimate has been updated. Some processes have been eliminated. John O'Brien will provide the updated costs and the description of the planned improvements to the plant.

4. Question/Discussion Item: Confirm Flint's allocated percentage of the KWA capital improvements (30%?).

   Yes, the allocation is based on 18 MGD/60 MGD total capacity.

5. Question/Discussion Item: Copy of the proposed KWA operating agreement for Flint.

   John O'Brien will provide the operating agreement as well as the Capacity Contract and Articles of Incorporation.

6. Question/Discussion Item: What is the annual operating agreement adjustment projected for the 25 year planning period?

   This information is provided in Appendix 14, Table 14.2 of the September 2009 Preliminary Engineering Report. Operating cost based on Table 1. Used 12 MGD as average day demand (ADD). Assumed 5% as the annual increase in operating costs. John O'Brien indicated that these operating costs were based on Genesee County's operating costs. John O'Brien will provide the last 10 years of audited financial statements for the water fund.

   To assess operating and maintenance costs for the Flint WTP, Duffy will provide multiple years of financial statements for the water fund. Duffy did not believe they had 10 years, but they will provide what they have.

   Regarding operation and maintenance costs, Flint believes that these costs will increase by 2/3 of what they are now.

7. Question/Discussion Item: Need the route of the pipelines and the locations of the facilities proposed. Purpose is to identify constraints that impact costs (i.e., utilities, environmental (e.g. wetlands), easements, etc.).

   KWA will not release the route due to concerns regarding speculation of land and easements. John O'Brien did indicate that the Lake Huron pump station would be at Fisher and M-25. The intermediate pump station site is near a location of the Lapeer/Sanilac/St. Clair border; where all three meet.

8. Question/Discussion Item: KWA's initial charge to Flint is based on a 12 MGD average day demand. What is the basis of this number? Are there population projections and water use figures available that were used to determine the Flint demand for the 25 year planning period?

Comments: Meeting minutes were recorded based on the understanding of the author. Please contact the author within three days if you have any different understanding of the meeting. These minutes will be considered approved unless comments are provided within three days.

This was answered in Question No. 1 above.

9. Question/Discussion Item: Is there a transition plan and cost during construction of the KWA system identified?

   Flint is looking for an agreement with DWSD for back-up supply from the 72-inch main at the Genesee border.

10. Question/Discussion Item: The October 4, 2012 Preliminary Engineering Report Update states: "no backup power is planned for the pumps" (LHPS) and "No backup power is planned for pumping" (IPS). In case of power loss, how would Flint supply its customers?

    Flint indicated that they have adequate storage to supply the system for 6 to 7 days. Flint has 55 MG of storage and Genesee County has 65 MG for 2.5 days.

11. Question/Discussion Item: The latest plan shows only a 5 million gallon ground reservoir is planned for balancing between LHPS and IPS. How is redundancy maintained?

    In cases of emergency, Flint indicated that the back-up for the KWA system will be the same as it is now with DWSD; they will use the Flint River as the source water. Flint currently operates their plant four times a year.

    When questioned as to whether the WTP will be able to treat both lake water from the KWA system and river water Flint indicated that once the improvements identified in the September 2009 Preliminary Engineering Report are completed they will be able to accomplish both treatment processes. Flint will provide a schematic of the treatment trains at the WTP and a copy of the Flint transmission system.

    Genesee County indicated that additional redundancy would also be provided from the new Genesee County WTP.

    Regarding hydraulic transients; Genesee County indicated that a model analysis has not been included, but capital costs for mitigating transients have been included.

12. Question/Discussion Item: Related to the construction cost:

    a. Does it include an additional traffic lane since the construction will occupy half the right of way? *Not required, all roads are county roads; however, there are a few State road crossings*.

    b. Does it include costs/fees for permit requirements such as inspection cost by the jurisdictional authorities? As a point of reference, the permit fee costs for the Flint Transmission System came out to be $5.8 million. *Not required; all of the counties have waived any fees.*

    c. Does the cost of the steel pipe segments include corrosion protection measures such as

anode stations and related O&M? *Yes; however, the KWA has not settled on using steel pipe. PCCP pipe may be used. Steel shown in estimate because it is highest in cost and therefore the pricing is conservative.*

d. SCADA monitoring stations require power. Is the cost of bring power to the SCADA stations included? Again, as a point of reference for the Flint Transmission System we estimated $800,000 for power to SCADA and valve operators. *Yes, Genesee County did emphasize that the SCADA system will be simple and straightforward because a lot of controls are not required.*

e. Other items discussed at the meeting included:

- The 2009 plant improvement cost is still good; however, there will be some reduction, such as a sulfuric chloride feed system that was eliminated. Plant capacity now is 36MGD, but will be 18 MGD.
- The KWA Lake Huron Pumping Station (LHPS) is now only high lift pump station.
- Genesee County will provide the distance of the intake pipe from the crib to the LHPS.
- The intake project is almost ready to bid; waiting for the COE permit.
- Genesee County is estimating the construction for the pipe lines and pump stations will begin July 2013.
- The route has been flown for survey.
- Genesee County is estimating construction will be complete and the project will be placed in service by Jan 2016.
- Genesee County to provide a list of assumptions that the $272 million cost estimate is based on since the route is now known.

13. The Flint River is identified as a backup: At what capacity? MDD or emergency supply?

    The Flint River would serve as a back up supply.

14. Where did the 40 years come from (Flint hostage to Detroit)? DWSD's new contracts are 30 years with openers to revise terms of supply (volume and pressure) after the first two years, then three years, and then in five year increments thereafter.

    The 40 years was stated in error. The reference was to DWSD's requirement to sign a 30 year contract.

    After 40 years Flint will own 30% of the project and can sell their share of ownership if they want. Conversely, with DWSD, they continue to pay for the capital projects but have no ownership. Flint believes they will know what they will be charged for the next 25 years versus DWSD that can't commit to a fixed escalation.

Comments: Meeting minutes were recorded based on the understanding of the author. Please contact the author within three days if you have any different understanding of the meeting. These minutes will be considered approved unless comments are provided within three days.

Action Items for Follow-up		
Items:	***Assigned To:***	***Date to Complete***
1. Updated Costs for the Flint WTP Improvements and a description of the improvements.	John O'Brien	11/21/12
2. KWA Operating Agreement, Capacity Contract and Articles of Incorporation.	John O'Brien	11/20/12
3. Provide the last 10 years of audited financial statements for the Genesee water fund.	John O'Brien	11/20/12
4. Provide multiple years of financial statements for the City of Flint water fund.	Duffy Johnson	11/26/12
5. Provide schematic of the Flint WTP and a map of the Flint transmission system.	Brent Wright	11/26/12
6. Provide the length of the intake pipe from the crib to the pump station.	John O'Brien	11/20/12
7. Provide a list of assumptions that the $272 million cost estimate is based on since the route is now known.	John O'Brien	11/26/12

Comments: Meeting minutes were recorded based on the understanding of the author. Please contact the author within three days if you have any different understanding of the meeting. These minutes will be considered approved unless comments are provided within three days.

CITY OF FLINT WATER SUPPLY ASSESSMENT

KWA Discussion/Questions for the November 20, 2012 Meeting

1. Is the maximum day demand of 18 MGD for Flint the maximum day demand (MDD) throughout the 25 year planning period? If not, what is the 25 year projected MDD?
2. Copy of the intake contract documents and engineer's estimate.
3. Documentation of the Flint WTP improvements required and cost estimate.
4. Confirm Flint's allocated percentage of the KWA capital improvements (30%?).
5. Copy of the proposed KWA operating agreement for Flint.
6. What is the annual operating agreement adjustment projected for the 25 year planning period?
7. Need the route of the pipelines and the locations of the facilities proposed. Purpose is to identify constraints that impact costs (i.e., utilities, environmental (e.g. wetlands), easements, etc.).
8. KWA's initial charge to Flint is based on a 12 MGD maximum day demand. What is the basis of this number? Are there population projections and water use figures available that were used to determine the Flint demand for the 25 year planning period?
9. Is there a transition plan and cost during construction of the KWA system identified?
10. The October 4, 2012 Preliminary Engineering Report Update states: "no backup power is planned for the pumps" (LHPS) and "No backup power is planned for pumping" (IPS). In case of power loss, how would Flint supply its customers?
11. The latest plan shows only a 5 million gallon ground reservoir is planned for balancing between LHPS and IPS. How is redundancy maintained?
12. Related to the construction cost:
    a. Does it include an additional traffic lane since the construction will occupy half the right of way?
    b. Does it include costs/fees for permit requirements such as inspection cost by the jurisdictional authorities? As a point of reference, the permit fee costs for the Flint Transmission System came out to be $5.8 million.

Comments: Meeting minutes were recorded based on the understanding of the author. Please contact the author within three days if you have any different understanding of the meeting. These minutes will be considered approved unless comments are provided within three days.

c. Does the cost of the steel pipe segments include corrosion protection measures such as anode stations and related O&M?
d. SCADA monitoring stations require power. Is the cost of bring power to the SCADA stations included? Again, as a point of reference the for the Flint Transmission System we estimated $800,000 for power to SCADA and valve operators.

13. The Flint River is identified as a backup: At what capacity? MDD or emergency supply?
14. Where did the 40 years come from (Flint hostage to Detroit)? DWSD's new contracts are 30 years with openers to revise terms of supply (volume and pressure) after the first two years, then three years, and then in five year increments thereafter.

Comments: Meeting minutes were recorded based on the understanding of the author. Please contact the author within three days if you have any different understanding of the meeting. These minutes will be considered approved unless comments are provided within three days.

Good afternoon:

Attached, please find the blood lead level test results for Flint zip codes 48501-48507, as well as a corresponding press release and talking points. With your approval and edits, we are planning to notify external partners tomorrow at 9:30 a.m. then post the report on www.michigan.gov/flintwater and issue the press release at 10 a.m.

Please let us know if you have any questions or concerns.

Thanks and best,

Jennifer Eisner

Michigan Department of Health and Human Services (MDHHS)
Blood Lead Level Test Results for Flint Zip Codes 48501-48507
Summary as of October 30, 2015

Executive Summary

This report is generated by MDHHS to track Blood Lead Level test results in Flint, Michigan.

- Counts on this report include both capillary and venous blood tests. People who have had multiple tests are counted only once.
- Since 10/1/2015, an additional 963 people have been tested in Flint.
- Continued testing efforts by Genessee County Health Department, MDHHS and local medical personnel have identified 18 children with blood lead levels greater than or equal to 5µg/dL since 10/1/2015.
- Three percent of the children younger than 6 years old tested since 10/1/2015 have had blood lead levels greater than or equal to 5µg/dL.
- Additional testing is ongoing. Counts will vary as new results are added.

Number of People Tested for Lead in Flint

Total number of people tested for lead from 1/1/2013 to 4/14/2014	4657
Total number of people tested for lead from 4/15/2014 to 9/30/2015	5017
Total number of people tested for lead since 10/1/2015:	**963**

Children Younger than 6 Years Old with Blood Lead Levels (BLL) ≥5µg/dL

Total number of children tested for lead from 1/1/2013 to 4/14/2014	3811
Number of child BLL test results ≥5µg/dL from 1/1/2013 to 4/14/2014	112
Total number of children tested for lead from 4/15/2014 to 9/30/2015:	4156
Number of child BLL test results ≥5µg/dL from 4/15/2014 to 9/30/2015:	181
Total number of children tested for lead since 10/1/2015:	**385**
Number of child BLL test results ≥5µg/dL since 10/1/2015:	**12**

Adults (18 Years or Older) with Blood Lead Levels (BLL) ≥5µg/dL

Total number of adults tested for lead from 1/1/2013 to 4/14/2014	170
Number of adult BLL test results ≥5µg/dL from 1/1/2013 to 4/14/2014	22
Total number of adults tested for lead from 4/15/2014 to 9/30/2015:	207
Number of adult BLL test results ≥5µg/dL from 4/15/2014 to 9/30/2015:	13
Total number of adults tested for lead since 10/1/2015:	**289**
Number of adult BLL test results ≥5µg/dL since 10/1/2015:	**6**

Children 6 to 17 Years Old with Blood Lead Levels (BLL) ≥5µg/dL

Total number of children tested for lead from 1/1/2013 to 4/14/2014	676
Number of child BLL test results ≥5µg/dL from 1/1/2013 to 4/14/2014	5
Total number of children tested for lead from 4/15/2014 to 9/30/2015:	654
Number of child BLL test results ≥5µg/dL from 4/15/2014 to 9/30/2015:	7
Total number of children tested for lead since 10/1/2015:	**289**
Number of child BLL test results ≥5µg/dL since 10/1/2015:	**6**

Blood Lead Levels in Flint Talking Points
November 18, 2015

Blood Lead Level Testing Results

- The Michigan Department of Health and Human Services is releasing a report regarding blood lead levels in Flint children and adults in zip codes 48501-48507.
- The purpose of the report is to inform residents about blood lead level testing efforts in Flint and provides cumulative total numbers.
- It is not intended to be a technical report but a technical description, and further analysis of the data in the report is underway.
- The data in the report include the total number of tests conducted and the total number of elevated blood lead levels ≥5µg/dL (micrograms per deciliter), broken down by date and age ranges.
    - Specifically, the current report breaks down the data by the 16 months prior to the switch in water source for Flint (January 1, 2013 through April 14, 2014), to the 17 months after the switch (April 15, 2014 through September 30, 2015), and after the lead exposure prevention campaign was initiated by the State in Flint October 1, 2015 to October 30, 2015. These numbers will continue to be updated.
    - The report also breaks down the number of tests and elevated blood lead levels by children younger than 6, children ages 6-17, and adults 18 years and older.
        - Lead exposure for children younger than 6 is of particular concern because they are more sensitive to the effects of lead and tend to absorb more than older children and adults.
- Data in the report includes both capillary and venous blood tests. People who have had multiple tests are counted only once.
- 963 people were tested in Flint between October 1, 2015, and October 30, 2015, 18 children 17 years of age or younger had elevated blood lead levels. Six adults over the age of 18 were identified with elevated blood lead levels during this time as well.
- With these testing results, MDHHS is working closely with the Genesee County Health Department to conduct case management to ensure that these families are receiving the follow up care they need - including additional blood testing and a home investigation to identify and help reduce the potential for additional lead exposure in their environment.
- In addition to this report, MDHHS has zip code level data available by quarter for 48503-48507 by request. Zip codes 48501-48502 do have some cases, but the numbers are too small to release by quarter.

Water Filters and Replacement Filters

- Our first action item is to work closely with our public and private partners to provide water filters to Flint residents and MDHHS clients.
- To meet this priority, the governor identified one million dollars in state funding to purchase water filters for Flint residents.
- The Brita SAFF-100 filters being distributed by the department and GCCARD do meet the NSF/ANSI 53 standards for drinking water treatment units.
- The Brita faucet filtration system we are distributing are National Sanitation Foundation certified to reduce lead in drinking water.
- Free water filters and replacement cartridges are available to current Michigan Department of Health and Human Services clients and Flint residents who are on the Flint water system at four locations:
    - Flint residents who are not current MDHHS clients should visit one of two Genesee County Community Action Resource Department offices to obtain a filter.
        - at 2727 Lippincott and 601 North Saginaw in Flint
    - Current MDHHS clients in the city of Flint should visit their local MDHHS office:
        - At 125 E. Union St. or 4809 Clio Road
- Staff will be onsite at all four locations from 9 a.m. to 4 p.m., Monday through Friday, to distribute filters and assist residents who have questions about proper installation.
- Given the questions and concerns regarding the change in water source in Flint, MDHHS authorized the use of emergency services funding to provide water filters for MDHHS clients receiving assistance in the city of Flint.
- This funding will support active Family Independence Program (FIP), Food Assistance Program (FAP), Child Development and Care (CDC), State Disability Assistance (SDA), State Disability Assistance (SDA), or Social Security Insurance (SSI) recipients so that they can obtain filters that are National Sanitation Foundation (NSF) certified to remove lead and ANSI Standard 53.
- MDHHS has also posted an instructional video on the MDHHS YouTube channel to help residents properly install water filters, and to demonstrate how to replace the original filter when it expires.
    - https://www.youtube.com/watch?v=plsOvmH___0
- MDHHS currently serves approximately 25,000 households in Flint.

Background Information

- Initial analysis of MDHHS data found that blood lead levels of children in Flint have followed an expected seasonal trend; due to small numbers further analysis was initiated.

- While this analysis of blood lead levels in Flint as a whole remains true, after a comprehensive and detailed review down to the zip code level, we have found that the state analysis is consistent with that presented by Hurley.
- Director Lyon is working closely with DEQ and the administration to take active steps to reduce all potential lead exposures in Flint and across the state.
- Our Chief Medical Executive has been in communication with the lead investigator at Hurley Children's Hospital, and we continue to work with Hurley, the city of Flint, local and state leaders to verify and analyze data trends.
- Zip code-level data does show that there has been an increase in elevated childhood blood lead levels in specific communities.
    - This does not conclusively mean that the water source change is the sole cause of the increase, but data does show an association.
    - There is an increased proportion of children with elevated blood levels in several zip codes, particularly 03 and 04. These appear to have increased over the last 1.5 years.
    - Lead exposure can occur from a number of different sources (such as paint, gasoline, solder, and consumer products) and through different pathways (such as air, food, water, dust, and soil).
    - Although there are several exposure sources, lead-based paint is still the most widespread and dangerous high-dose source of lead exposure for young children in the US and Michigan.
- We reviewed MDHHS statewide data using the same methodology used by Hurley, looking at our numbers by zip code and age ranges, and filtering out non-Flint children.
- Routine surveillance of blood lead levels does not analyze data down to the zip code level. Detailed analysis like this occurs when there is reason to focus in on precise locations or populations.
- MDHHS is working closely with the Michigan Department of Environmental Quality, Hurley Children's Hospital, the Genesee County Health Department, and community organizations to initiate further action steps.
- We understand that cost may be a barrier to following the recommendations for drinking water, which is why NSF-certified filters are being distributed to residents on the Flint water system free of charge.
- MDHHS is recommending that residents follow the Public Health Advisory issued by the Genesee County Health Department, as well as take further steps to reduce exposures to all forms of lead in and around their homes.

MDHHS Stats and Facts

- 'High Risk' Zip codes (48503 and 48504)

    - Blood lead level rates among children under six years of age in the high risk zip codes (48503, 48504) were 2.7 times higher than the rest of Genesee County before the switch to Flint River Water.
    - After the switch to Flint River Water, rates in the high risk Zip codes were 3.2 times that of the rest of Genesee County.
- Other Zip codes in Flint
    - Rates of elevated blood lead levels among children under six years of age in other parts of the city of Flint were 2 times that of the rest of Genesee County before the switch to Flint River Water.
    - The magnitude of the elevated rate remained roughly the same during the period after the water source switch.
- Lead abatement through MDHHS was federally funded up until FY14 when Michigan began providing additional funds to abate homes.
- In FY14, $1.25M General Fund was added. In FY15, General Fund was bumped up to $1.75M and FY16, General Fund remains at $1.75M.

Reducing and Removing Lead Exposure

- Use only cold filtered water from the tap for drinking, cooking, and making baby formula. Hot water is more likely to contain higher levels of lead. The lead in household water usually comes from the service line that connects your house to the water main or the plumbing in your house, not from the local water supply.
- In housing built before 1978, it can be assumed that the paint has lead unless tests show otherwise.
- Make sure your child does not have access to peeling paint or chewable surfaces painted with lead-based paint.
- Children and pregnant women should not be present in housing built before 1978 that is undergoing renovation. They should not participate in activities that disturb old paint or in cleaning up paint debris after work is completed.
- Create barriers between living/play areas and lead sources. Until environmental clean-up is completed, you should clean and isolate all sources of lead.
    - Close and lock doors to keep children away from chipping or peeling paint on walls. You can also apply temporary barriers such as contact paper or duct tape, to cover holes in walls or to block children's access to other sources of lead.
- Regularly wash children's hands and toys. Hands and toys can become contaminated from household dust or exterior soil. Both can be lead sources.
- Regularly wet-mop floors and wet-wipe window components. Because household dust is a major source of lead, you should wet-mop floors and wet-wipe horizontal surfaces every 2-3 weeks.

    - Windowsills and wells can contain high levels of leaded dust. They should be kept clean. If feasible, windows should be kept shut to prevent abrasion of painted surfaces or opened from the top sash.
- Take off shoes when entering the house to prevent bringing lead-contaminated soil in from outside.
- Prevent children from playing in bare soil; if possible, provide them with sandboxes. Plant grass on areas of bare soil or cover the soil with grass seed, mulch, or wood chips, if possible.
    - Until the bare soil is covered, move play areas away from bare soil and away from the sides of the house. If you have a sandbox, cover the box when not in use to prevent cats from using it as a litter box. That will help protect children from exposure to animal waste.
- Avoid using makeup, containers, cookware, or tableware to store or cook foods or liquids that are not shown to be lead-free.
- Remove recalled toys and toy jewelry immediately from children.
- Shower and change clothes after finishing a task that involves working with lead-based products such as stained glass, making bullets, or using a firing range.

If possible, shower and change before returning home if your job requires you to work with or around lead. These jobs can include painting, plumbing, and some factory work.

WIC Children

- There are 855 infants participating in WIC in Flint.
- We are working with partners at the United Way to ensure that WIC families have access to water filters and bottled water.
- In homes with infants on WIC, if the household has documentation from an official source documenting unsanitary water supply issues, that family may be eligible to receive ready-to-feed formula. Families should contact WIC to see if they are eligible.
- Each household will be considered on an individual basis.
- WIC cannot cover bottled water.

    - Rates of elevated blood lead levels among children under six years of age in other parts of the city of Flint were 2 times that of the rest of Genesee County before the switch to Flint River Water.
    - The magnitude of the elevated rate remained roughly the same during the period after the water source switch.
- Lead abatement through MDHHS was federally funded up until FY14 when Michigan began providing additional funds to abate homes.
- In FY14, $1.25M General Fund was added. In FY15, General Fund was bumped up to $1.75M and FY16, General Fund remains at $1.75M.

Reducing and Removing Lead Exposure

- Use only cold filtered water from the tap for drinking, cooking, and making baby formula. Hot water is more likely to contain higher levels of lead. The lead in household water usually comes from the service line that connects your house to the water main or the plumbing in your house, not from the local water supply.
- In housing built before 1978, it can be assumed that the paint has lead unless tests show otherwise.
- Make sure your child does not have access to peeling paint or chewable surfaces painted with lead-based paint.
- Children and pregnant women should not be present in housing built before 1978 that is undergoing renovation. They should not participate in activities that disturb old paint or in cleaning up paint debris after work is completed.
- Create barriers between living/play areas and lead sources. Until environmental clean-up is completed, you should clean and isolate all sources of lead.
    - Close and lock doors to keep children away from chipping or peeling paint on walls. You can also apply temporary barriers such as contact paper or duct tape, to cover holes in walls or to block children's access to other sources of lead.
- Regularly wash children's hands and toys. Hands and toys can become contaminated from household dust or exterior soil. Both can be lead sources.
- Regularly wet-mop floors and wet-wipe window components. Because household dust is a major source of lead, you should wet-mop floors and wet-wipe horizontal surfaces every 2-3 weeks.

    - Windowsills and wells can contain high levels of leaded dust. They should be kept clean. If feasible, windows should be kept shut to prevent abrasion of painted surfaces or opened from the top sash.
- Take off shoes when entering the house to prevent bringing lead-contaminated soil in from outside.
- Prevent children from playing in bare soil; if possible, provide them with sandboxes. Plant grass on areas of bare soil or cover the soil with grass seed, mulch, or wood chips, if possible.
    - Until the bare soil is covered, move play areas away from bare soil and away from the sides of the house. If you have a sandbox, cover the box when not in use to prevent cats from using it as a litter box. That will help protect children from exposure to animal waste.
- Avoid using makeup, containers, cookware, or tableware to store or cook foods or liquids that are not shown to be lead-free.
- Remove recalled toys and toy jewelry immediately from children.
- Shower and change clothes after finishing a task that involves working with lead-based products such as stained glass, making bullets, or using a firing range.

If possible, shower and change before returning home if your job requires you to work with or around lead. These jobs can include painting, plumbing, and some factory work.

WIC Children

- There are 855 infants participating in WIC in Flint.
- We are working with partners at the United Way to ensure that WIC families have access to water filters and bottled water.
- In homes with infants on WIC, if the household has documentation from an official source documenting unsanitary water supply issues, that family may be eligible to receive ready-to-feed formula. Families should contact WIC to see if they are eligible.
- Each household will be considered on an individual basis.
- WIC cannot cover bottled water.

Good afternoon:

Attached, please find the blood lead level test results for Flint zip codes 48501-48507, as well as a corresponding press release and talking points. With your approval and edits, we are planning to notify external partners tomorrow at 9:30 a.m. then post the report on www.michigan.gov/flintwater and issue the press release at 10 a.m.

Please let us know if you have any questions or concerns.

MDHHS releases new report outlining blood lead levels in Flint

Follow-up care, case management resources continue for families

LANSING, Mich. – The Michigan Department of Health and Human Services today issued data regarding blood lead levels in Flint children and adults. The report is intended to inform residents about blood lead level testing efforts in Flint and provide cumulative total numbers.

"With the progress that we've made in testing and identifying those with elevated blood lead levels, the Department will continue to work closely with the Genesee County Health Department to reach these families and conduct case management to reduce their exposure to lead sources," said Dr. Eden Wells, chief medical executive with the MDHHS. "We will update these numbers on a regular basis and remain diligent in our ongoing outreach and education."

Between October 1 and October 30 of this year, there were 963 people tested in Flint. Of those children tested, 18 children 17 years of age or younger had elevated blood lead levels. Six adults over the age of 18 were identified with elevated blood lead levels during this same timeframe.

The data in the report include the total number of tests conducted and the total number of elevated blood lead levels greater than 5 micrograms per deciliter, and captures both capillary and venous blood tests. People who have had multiple tests are counted only once. The full report is posted online at www.michigan.gov/flintwater and will be updated as more data becomes available.

Last month, MDHHS collaborated with the Genesee County Health Department and local partners to distribute educational resources and informational letter to Flint parents regarding lead testing. GCHD nursing staff are conducting direct outreach to families when an elevated blood lead level has been detected, serving as an important resources by addressing questions and concerns, providing information, and meeting them in their home environment.

MDHHS continues to provide free water filters and replacement cartridges to Flint residents at four locations including the MDHHS Flint offices and the Genesee County Community Action Resource Department. For a full list of locations and hours of distribution, visit www.michigan.gov/flintwater.

To help residents properly install water filters, and to demonstrate how to replace the original when it expires, MDHHS has created an instructional on the MDHHS YouTube channel. For additional updates on Flint water including updates on blood lead levels and testing results, visit www.michigan.gov/flintwater.

Hi Andy: Why did the state and city opt to go with KWA for Flint water supply when the study you commissioned from Tucker, Young, Jackson, Tull found that going with KWA would be more costly than staying with DWSD? (Here is excerpt from p. 17):

"Based on the analysis, it is prudent to assume the KWA water supply option costs would be somewhere between the KWA-1 and KWA-2 options. Therefore, the analysis indicates that the two DWSD options of supplying 8 MGD on a maximum day and up to 8 MGD on average are the least cost options for Flint. These options allow Flint to maximize the use of existing assets; the City of Flint's (the Flint WTP) and

DWSD's (the existing 72-inch main)."

How would you describe your role in the chain of decisions that led to Flint drawing its water supply from the Flint River?

The Flint City Council opted to go with the KWA on the evening of March 25, 2013. Your schedule shows you had a 5 p.m. phone conversation at 5 p.m. that day with Dennis Muchmore "regarding Flint Water Supply alternatives."

The next day, March 26, 2013, your schedule shows a 9 a.m. meeting at Treasury "regarding Flint water, a 1:30 p.m. phone call with Dan Wyant "regarding Flint/KWA," and a w p.m. meeting in Lansing with Flint Mayor Dayne Walling?

What do you recall about these conversations/meetings? Did Muchmore sign off on the switch to KWA on behalf of the governor?

Thanks, Paul Egan

I wanted to check with the city and the DEQ to see if either of you care to comment on remarks this morning by professor Marc Edwards.
Speaking at Hurley Medical Center, Edwards said Flint water is still not safe to drink without a filter based on samples collected as recently as 10 days ago.
He said he expects water to meet EPA thresholds for lead within a month.

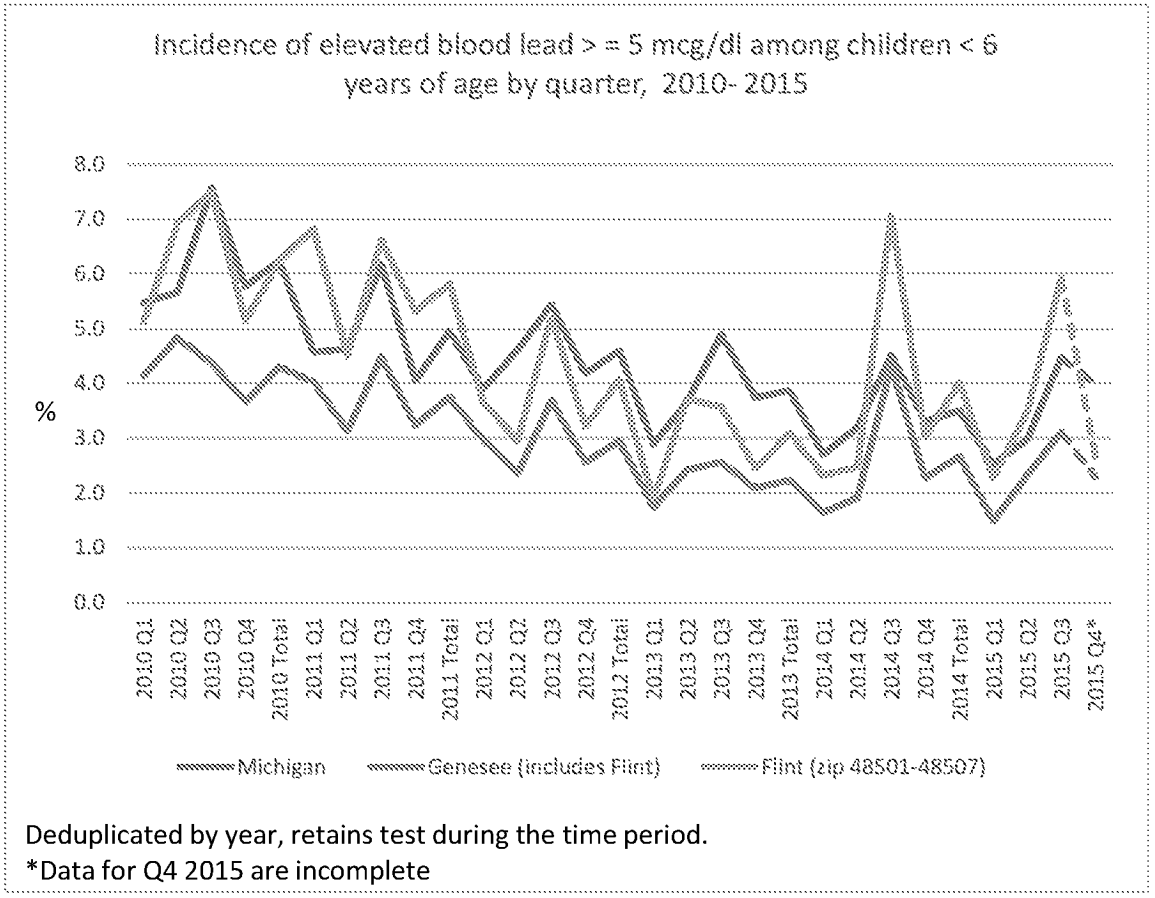
Michigan Department of Health and Human Services (MDHHS)
Blood Lead Level Test Results for Flint Zip Codes 48501-48507
Genesee County, and the State of Michigan
Summary as of November 13, 2015

Executive Summary

This report is generated by MDHHS to track Blood Lead Level test results in Flint, Michigan.

- Counts on this report include both capillary and venous blood tests. People who have had multiple tests are counted only once per year.
- Since 10/1/2015, an additional 1,361 people have been tested in Flint.
- Continued testing efforts by Genesee County Health Department, MDHHS and local medical personnel have identified 21 children with blood lead levels greater than or equal to 5µg/dL (micrograms per deciliter) since 10/1/2015.
- Three percent of the children younger than 6 years old tested since 10/1/2015 have had blood lead levels greater than or equal to 5µg/dL.
- Additional testing is ongoing. Counts will vary as new results are added.



Deduplicated by year, retains test during the time period.
*Data for Q4 2015 are incomplete

** Data for Quarter 4 of 2015 are incomplete and subject to change*

MDHHS releases recent data outlining blood lead levels in Flint

Follow-up care, case management resources continue for families

LANSING, Mich. – The Michigan Department of Health and Human Services today issued preliminary data regarding blood lead levels in Flint children and adults. The department's summary report shows that 30 of 1,361 adults and children tested in Flint since October 1 had elevated levels.

MDHHS is working closely with the Genesee County Health Department to reach out to families testing with higher levels and help them reduce their exposure to lead sources. The report is intended to inform residents about blood lead level testing efforts in Flint and provide cumulative total numbers.

"Our goal is to help families reduce their exposure to lead sources," said Dr. Eden Wells, MDHSS chief medical executive. "We have made progress in testing and identifying those with elevated blood lead levels, and the department will continue to work closely with the county health department to reach these families. We will update these numbers on a regular basis and remain diligent in our ongoing outreach and education."

Information was gathered from tests administered citywide to 1,361 children and adults since October 1. Twenty-one children age 17 or younger had elevated blood lead levels. Nine adults over the age 18 were identified with elevated blood lead levels.

The data in the report include the total number of tests conducted and the total number of elevated blood lead levels greater than 5 micrograms per deciliter, and captures both capillary and venous blood tests that have been reported to MDHHS since the beginning of October. People who have had multiple tests are counted only once. The full report is posted online at www.michigan.gov/flintwater and will be updated as more data becomes available.

The testing is part of the state's action plan to address health concerns related to Flint's water infrastructure.

When reviewing trend data for past years, the third quarter reflects the months during which the risk of lead exposure is highest (July through September). From the third quarter of 2010, there was a citywide elevated blood lead level in children less than six years of age of 8.3 percent, which decreased over the next three years to 4.1 percent in the third quarter of 2013. In the third quarter of 2014, citywide elevated blood lead levels in children less than six years of age increased to 7.5 percent, and 6.4 percent in 2015. At the end of the third quarter of 2015, increased testing activities began in the city of Flint.

- MORE -

Last month, MDHHS collaborated with the county health department and local partners to distribute educational resources and informational letters to Flint parents regarding lead testing. The state provided supplemental funding to support GCHD nursing staff to conduct direct outreach to families when an elevated blood lead level has been detected. During these follow-up visits, nurses coordinate with environmental health investigators to identify lead exposures, address questions and concerns, provide filters and further information, and meet with families in their home environment.

MDHHS continues to provide free water filters and replacement cartridges to Flint residents at four locations including the MDHHS Flint offices and the Genesee County Community Action Resource Department. For a full list of locations and hours of distribution, visit www.michigan.gov/flintwater.

To help residents properly install water filters, and to demonstrate how to replace the original when it expires, MDHHS has created an instructional on the MDHHS YouTube channel. For additional updates on Flint water including updates on blood lead levels and testing results, visit www.michigan.gov/flintwater.

Joe, nice speaking with you this morning. Let me know if you need more.

Dave

Flint residents need to have access to safe, clean water. Gov. Snyder and the administration have been working closely with the city to focus on health issues affecting children and other city residents, and address water infrastructure challenges.

The water leaving Flint's drinking water system is safe to drink, but some families with lead plumbing in their homes or service connections could experience higher levels of lead in the water that comes out of their faucets. Gov. Snyder in October created action plan that focuses on increasing water testing, offering additional precautions for families with lead plumbing in their homes, and providing long-term solutions to address the city's water infrastructure challenges. The plan was created at Snyder's direction by the Michigan Departments of Environmental Quality and Health and Human Services, the U.S. Environmental Protection Agency, and the city of Flint.

The plan builds upon ongoing work with local, state and federal agencies and our partnership with city and community leaders. Together, we are working to ensure that all Flint residents have accurate information and know that help is available to address potential problems.

The state also has offered more than $10 million in grants and other financial assistance to cover part of the payment for the temporary switch to the Great Lakes Water Authority until Flint's new water source is ready to go online as well as efforts to improve existing city water infrastructure and purchase water filters for residents.

The governor also appointed a bipartisan task force charged with reviewing all of the city, state and federal government actions and recommending changes looking forward that can address potential challenges in Flint and other cities.
For your background, the action plan includes:

* Testing in Flint public schools immediately to ensure that drinking water is safe, with testing also available at no cost to any other school in Flint.
* Offering free water testing to Flint residents to assure their drinking water is safe.
* Providing free water filters to residents.
* Expanding health exposure testing of individual homes.
* Accelerating corrosion controls in the Flint drinking water system.
* Accelerating water system improvements to address replacing lead service lines.
* Expediting the completion of the Karegnondi Water Authority pipeline.
* Expanding a Safe Drinking Water Technical Advisory Committee to ensure the best technology, practices and science are being followed by adding an expert from the Environmental Protection Agency's Office of Research and Development to the group.
* Naming Dr. Eden Wells, chief medical executive for the Michigan Department of Health and Human Services, as the Flint drinking water public health adviser.
* Boosting a comprehensive lead education program to make sure residents have detailed information about how to protect themselves and their homes.

Hello Yanan,

Please make one more correction. The misquote is causing us a great deal of problems today.

What you wrote: He added that while Flint $B!G (Bs water is currently safe to drink, $B!H (Bsome families with lead plumbing in their homes or service connections could experience higher levels of lead in the water that comes out of their faucets. $B!I (B

What I said: The water leaving Flint $B!G (Bs drinking water system is safe to drink, but some families with lead plumbing in their homes or service connections could experience higher levels of lead in the water that comes out of their faucets.

While it might seem like a small detail, it is TREMENDOUSLY important to include the part about the water leaving

Flint $B!G (Bs drinking water system. Flint $B!G (Bs water is not safe to drink for many residents at this point unless they have filters or are following the recommendations about letting the water run for several minutes before using.

Can you please make this correction quickly?

Thank you.

Roberto,

Flint residents deserve access to clean, safe water, and Gov. Snyder remains committed to working with Mayor Weaver to protect the health of Flint's children and the entire community, both immediately and into the future.

The state already has provided about $10 million in assistance, and the governor's action plan included increased testing in schools and of blood lead levels, distributing filters and other assistance. Recently, at the Governor's direction, leaders from the Michigan State Police Emergency Management and Homeland Security Division met with the mayor and Genesee County Commission chairman to help them determine the best possible pathway to additional state and federal resources.

We also are inviting every external scientist who has worked on this issue to be our partners in helping improve Flint water so we can arrive at accurate and mutually supported conclusions. We're committed to working together to protect Flint residents.

These are initial steps. The governor is meeting soon with Mayor Weaver to discuss other ways the state can offer assistance, and we expect to take further action once the independent Flint Water Task Force makes recommendations.

Roberto and Bryn,

I read with dismay the story about Rep. Neeley's comments. It's seems highly unfair that we were never contacted to reply. Nor is there any mention of the work the governor has done to assist Flint with its challenges, from the $10 million in assistance to the action plan to the work of the Flint Water Task Force or even the recent response from the Office of Auditor General.

Do you have my contact information? I work hard to make sure I am accessible to the media, even on weekends and holidays.

Please let me know if there is an opportunity for us to provide balance to this story.

Subject: RE: Flint point person

Arthur, I was just sending you an email.

From your story:

The trouble started in 2014 when emergency managers appointed by Michigan Gov. Rick Snyder (R) decided to try saving money by switching Flint's water supply from the Detroit system to the Flint River.

Arthur, this is greatly inaccurate. The city and county governments have been working -- for years -- to create a new water authority so the Flint area would stop using water from Detroit. There was a 7-1 Flint City Council vote to make the switch to the new source in Lake Huron, which the emergency manager affirmed to support the local wishes.

The Flint River has always been a been the backup source. The original plan from the city was to use Detroit water or a mix of Detroit and Flint River water during construction of the new pipeline. There wasn't an arbitrary decision to "try saving money."

This column from the emergency manager at the time explains the decision behind the switch in great detail.

Hi Dave, is Gov. Snyder going to appoint a "crisis responder" to oversee the Flint situation?

Am I missing something with Ananich's request for such? My sense is that he's trying to express dissatisfaction with the task force.

Senate Minority Leader Jim Ananich Wants More Urgency from Governor, Trained Emergency Coordinator on the Ground

LANSING, Mich. — Senate Minority Leader Jim Ananich (D–Flint) responded to today's release of Flint Water Task Force correspondence. He reiterated specific actions that would help organize efforts with the Flint water crisis, including bringing in a trained emergency management professional to coordinate assistance within the City of Flint.

"Political appointees and public relations people are what got us into this mess, and they aren't who we need leading us out of it," Sen. Ananich said. "Anything less than a professional trained in emergency management or public health will not suffice."

Sen. Ananich requested a crisis responder from the Michigan State Police, the Federal Emergency Management Agency or the Department of Homeland Security.

"Dashboards and nice words won't cut it — our community needs action and answers. While I appreciate that the task force seems to recognize it needs to recommend changes before they release their final report, the administration still doesn't seem to comprehend how devastating this crisis is and that it's far from over," Sen. Ananich said.

In addition to calling for more urgency, Sen. Ananich has pushed for stronger legislative oversight and hearings, and additional resources for those families suffering from lead overexposure.

Flint Water Advisory Task Force Initial Recommendations

Lansing, MI--The Flint Water Advisory Task Force today released a letter recently sent to Governor Rick Snyder, and the Governor's response, regarding initial recommendations to address health protection challenges with the Flint water supply. Copies of the letters are attached.

"We felt it was imperative to make these initial recommendations to help address the water crisis in Flint instead of waiting until our final report is submitted," said FWATF Co-Chair Chris Kolb. "We appreciate the prompt acceptance of our request for action by the Governor and see it as a step forward."

"The Task Force has been holding a number of fact finding interviews with individuals and groups that have pertinent information about what happened in Flint," FWATF Co-Chair Ken Sikkema stated. "While the Task Force is far from done with our work, the initial review has presented a very disturbing situation that will require many actions to help those that have suffered. We saw no reason to wait until the final report to make

these initial recommendations. We also anticipate that we will made additional recommendations prior to the final report."

The FWATF letter included in part:

"One primary concern we have at this point is that the current efforts appear to be taking place in the absence of a larger project coordination framework that measures results and clearly delineates responsibilities for continuing actions to protect public health. We believe the state is best positioned to facilitate this larger framework, which should address the following:

1. The need for MDHHS and MDEQ—and, possibly, other state agencies--to set **goals** for actions in collaboration with local and federal agencies and organizations.
2. The need for a set of corresponding **timelines** for the goals.
3. The need to establish **responsibility** for meeting the goals in a timely fashion and for **contingency plans** for the state if the goals are not being met.
4. The need for clear, regular **communication** with the Flint community and stakeholder groups regarding action steps and updates.

We also believe it important that a single person or entity—potentially independent of any one particular state agency and mutually agreeable to this Task Force and you, Governor—be established to provide effective coordination of ongoing activities and reporting on the status of mitigation measures. For this, we also believe a readily understood "dashboard" should be developed that reports on the goals, timelines and assignments. This will enable members of the Flint community, public health providers, and state agencies to know about the status of the Flint water crisis mitigation program, as well as promote coordination and accountability. The Task Force is prepared to assist in the development of that dashboard."

The full FWATF report is expected to be completed in early 2016.

Members of the Task Force include:

Matthew Davis, M.D., M.A.P.P., is professor of pediatrics and internal medicine at the University of Michigan Health System and professor of public policy at the Gerald R. Ford School at the University of Michigan, having joined the faculty in 2000. Davis also is a professor of health management and policy at the School of Public Health. He previously served as the chief medical executive of the Michigan Department of Community Health/Department of Health and Human Services.

Chris Kolb is president of the Michigan Environmental Council, a statewide coalition of 70 environmental, public health and faith-based nonprofit groups. Before joining the MEC, Kolb represented Ann Arbor in the state House for six years and served six years on the Ann Arbor City Council. He has been president of the MEC for six years.

Lawrence Reynolds, M.D., is a pediatrician in Flint who serves as president of the Mott Children's Health Center. He received his medical degree from Howard University College of Medicine and has been in practice for 36 years. He has served as president of the Genesee County Medical Society and the Michigan Chapter of the American Academy of

Pediatrics. He has been honored for his humanitarian and advocacy efforts on behalf of children from the Community Foundation of Greater Flint.

Eric Rothstein is a national water issues consultant and principal at the Galardi Rothstein Group. He served as an independent advisor on the creation of the Great Lakes Water Authority. Rothstein also has served as Jefferson County, Alabama's rate consultant and municipal adviser for litigation related to the county's bankruptcy and issuance of $1.7 billion in sewer warrants and led strategic financial planning for the City of Atlanta's Department of Watershed Management. He has more than 30 years of experience in water, wastewater and stormwater utility finance and rate-making assessments.

Ken Sikkema is a senior policy fellow at Public Sector Consultants, where he specializes in public finance, environment, and energy policy. Prior to joining the firm, Sikkema served in both the Michigan House and Senate, culminating with four years as Senate majority leader. He has also served as both an adjunct and visiting professor at Grand Valley State University.

The FWATF was formed by Governor Snyder to review actions regarding the Flint water system and offer recommendations both for Flint and Michigan to protect the health and safety of state residents.

December 7, 2015

Dear Governor Snyder:

On Wednesday, November 18, 2015, the Flint Water Advisory Task Force met with representatives of the Michigan Department of Environmental Quality (MDEQ) and the Michigan Department of Health and Human Services (MDHHS) to discuss elements of the 10-point Action Plan designed to address various issues related to the ongoing public health protection challenges precipitated by lead in the Flint water supply. These discussions were held at our request as part of our task to make recommendations to prevent a similar occurrence in Flint or elsewhere, and also to monitor ongoing mitigation efforts.

Subsequent to those meetings, on Tuesday, November 24, 2015, members of the Task Force participated in a conference call with yourself, members of the Administration, and representatives of these agencies to discuss the progress to date on the 10-point Action Plan, as well as several other related issues.

We want to acknowledge the steps that have already been taken to implement the action plan, specifically in the areas of outreach efforts to facilitate blood lead testing for children, communication with health care providers in the Flint community about the importance of testing children for lead, and the training of additional public health nurses in the Genesee County Health Department. We do believe, however, that additional steps need to be taken to reach additional children for blood lead testing, assure proper follow-up with children found to have elevated blood lead levels, and to continue water testing. We will continue to assess state and local efforts and make recommendations regarding specific steps that we believe are warranted.

One primary concern we have at this point is that the current efforts appear to be taking place in the absence of a larger project coordination framework that measures results and clearly delineates responsibilities for continuing actions to protect public health. We believe the state is best positioned to facilitate this larger framework, which should address the following:

1. The need for MDHHS and MDEQ—and, possibly, other state agencies--to set **goals** for actions in collaboration with local and federal agencies and organizations.
2. The need for a set of corresponding **timelines** for the goals.
3. The need to establish **responsibility** for meeting the goals in a timely fashion and for **contingency plans** for the state if the goals are not being met.
4. The need for clear, regular **communication** with the Flint community and stakeholder groups regarding action steps and updates.

We also believe it important that a single person or entity—potentially independent of any one particular state agency and mutually agreeable to this Task Force and you, Governor—be established to provide effective coordination of ongoing activities and reporting on the status of mitigation measures. For this, we also believe a readily understood “dashboard” should be developed that reports on the goals, timelines and assignments. This will enable members of the Flint community, public health providers, and state agencies to know about the status of the Flint water crisis mitigation program, as

well as promote coordination and accountability. The Task Force is prepared to assist in the development of that dashboard.

We believe it is vitally important that trusted members of the Flint community be engaged in communication on this issue, as well as the distribution of information conveyed by our suggested dashboard reporting. Accordingly, in advance of our final report, we would like to ensure the independent coordinator suggested above engage trusted community groups to begin rebuilding community trust in state actions.

We appreciate your personal interest in this issue, commitment to assisting the Task Force in our review, and—most importantly—commitment to ensuring that the full measure of state resources are brought forward to protect the public health in Flint and throughout the state.

Respectfully yours,

Flint Water Advisory Task Force:

Dr. Matt Davis

Chris Kolb

Dr. Larry Reynolds

Eric Rothstein

Ken Sikkema

STATE OF MICHIGAN
EXECUTIVE OFFICE
LANSING

RICK SNYDER
GOVERNOR

BRIAN CALLEY
LT. GOVERNOR

December 15, 2015

Dear Flint Water Advisory Task Force Members:

Thank you for your correspondence on Dec. 7, and, most importantly, for your hard work to promote public health and protect our residents as we move forward. Your efforts are both respected and appreciated.

As acknowledged in your letter, we have taken many steps to address the challenges in Flint as they relate to reducing lead exposure. I am pleased to see the progress since October, and recognize there is more work that must be done to ensure that this progress continues.

At the state level, there has been a confluence of efforts between Departments of Environmental Quality and the Department of Health and Human Services to coordinate with the Genesee County Health Department, local schools, and our partners in the non-profit community.

These partners are making progress, and we know we must always strive to improve practices and communication for continual improvement.

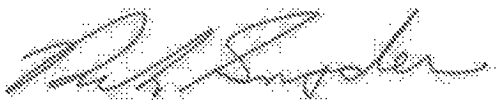
You make a solid recommendation to establish a person who is independent of any one of the involved state agencies to serve as the point person to coordinate the ongoing work. I am recommending that Harvey Hollins, director of the Office of Urban Initiatives, carry out this effort. Harvey is well-versed in the issues and the challenges faced by our cities and will be effective in this role. Senior members of our executive team will continue to engage with your task force and provide direction and support to Harvey to ensure you will have continued support and cooperation. We also have retained Chris DeWitt, a veteran communications specialist, to strengthen community outreach efforts to make sure residents have access to the information they need.

I also support your suggestion of a dashboard to make information about our work and progress more accessible to the Flint community. These are critical measures that can be used as we look the challenges and progress in Flint, but also can be a part of efforts moving forward in other areas of our state. It's important that people have confidence that we are working to address any problems and will take the necessary actions to improve interaction among city, state and federal agencies. We also will continue to work with the medical community to consider how we can work together on wraparound needs of children who might experience health problems.

People in Flint and across our state deserve safe, clean water. I want them to be confident that the water coming out of their tap is safe for their families. And I want them to trust that their government – at all levels – is working effectively to protect them.

I thank you again for investing your time and expertise in this vitally important effort.

Sincerely,



Rick Snyder
Governor

Subject: Flint water questions

Hello Jennifer. Sorry for the delay. I'm just catching up on email.

Flint residents need to have access to safe, clean water. Gov. Snyder and the administration have been working closely with the city to focus on health issues affecting children and other city residents, and address water infrastructure challenges.

Gov. Snyder in October created an action plan that focuses on increasing water testing, offering additional precautions for families with lead plumbing in their homes, and providing long-term solutions to address the city's water infrastructure challenges. The plan was created at Snyder's direction by the Michigan Departments of Environmental Quality and Health and Human Services, the U.S. Environmental Protection Agency, and the city of Flint.

The plan builds upon ongoing work with local, state and federal agencies and our partnership with city and community leaders. Together, we are working to ensure that all Flint residents have accurate information and know that help is available to address potential problems.

The state also has offered more than $10 million in grants and other financial assistance to cover part of the payment for the temporary switch to Great Lakes Water Authority water until Flint's new water source is ready to go online as well as efforts to improve existing city water infrastructure and purchase water filters for residents.

The governor also appointed a bipartisan task force charged with reviewing all of the city, state and federal government actions and recommending changes looking forward that can address potential challenges in Flint and other cities.

For your background, the action plan includes:

- Testing in Flint public schools immediately to ensure that drinking water is safe, with testing also available at no cost to any other school in Flint.
- Offering free water testing to Flint residents to assure their drinking water is safe.
- Providing free water filters to residents.
- Expanding health exposure testing of individual homes.
- Accelerating corrosion controls in the Flint drinking water system.
- Accelerating water system improvements to address replacing lead service lines.
- Expediting the completion of the Karegnondi Water Authority pipeline.
- Expanding a Safe Drinking Water Technical Advisory Committee to ensure the best technology, practices and science are being followed by adding an expert from the Environmental Protection Agency's Office of Research and Development to the group.
- Naming Dr. Eden Wells, chief medical executive for the Michigan Department of Health and Human Services, as the Flint drinking water public health adviser.
- Boosting a comprehensive lead education program to make sure residents have detailed information about how to protect themselves and their homes.

Subject: Sikkema's comments

Now I see why Brad is a bit teed. Here's what Sikkema said on Michigan Radio:

> I will say in our first few weeks really of reviewing this, this is a very, very serious situation. Not just how did it happen and why, but going forward in terms of public health issues related to lead lingering particularly in young children. It is a very troubling situation in Flint and it adds to it because of the failure of government to protect the population.

And … Sikkema thinks Gov. Snyder may face political fatigue heading into 2016:

> As governors start getting into their second term -- as this governor is -- two things happen. One thing is, you run into agenda fatigue, you kind of run out of big ideas. I think you'll see that dynamic starting in 2016. The other things is that it gets more difficult to marshal the legislative troops as your lame duck status begins to take hold.

Contact: Rep. Sheldon Neeley
Phone: (517) 373-5837

Michigan Legislative Black Caucus Calls For A State of Emergency In Flint MLBC urges Gov. Snyder to act on water crisis in city LANSING - The Michigan Legislative Black Caucus (MLBC) today joined the City of Flint, and urged Gov. Rick Snyder to issue a State of Emergency to address the continuing health concerns caused by the increased lead levels in their water. The MLBC request comes on the heels of the issuance of a State of Emergency declaration by Flint Mayor Karen Weaver, and the Flint City Council.

Although Flint has ceased pulling water from the Flint River, the emergency is in response to continuing reports and studies that indicate the presence of coliform bacteria and high levels of lead in the city's drinking water. Blood samples of Genesee County children - taken before and after the city ended its contract with the Detroit Water and Sewerage Department (DWSD) and began using Flint River water - showed that the number of Flint children with elevated blood-lead levels had jumped from 2.1 percent to 4 percent. Additional tests have disclosed that the blood-lead levels of children living in the poorest Flint neighborhoods have jumped from 2.5 percent to 6.3 percent.

It has been scientifically proven that even low lead levels can affect many different parts of the body. Lead can especially affect a child's mental development, behavior, ability to pay attention, hearing, IQ, kidneys and body growth.

State Rep. Sheldon Neeley (D-Flint), first vice chairman of the MLBC, is working with local, state and federal officials to find solutions and resources. A state-declared heath emergency will allow the city to access federal funding.

"Issuing a health emergency is the most responsible thing to do," Neeley said. "This is a public health crisis, and our children are most at risk. We urge Gov. Snyder to issue the State of Emergency so the city of Flint can get immediate monetary relief."

"Water is a basic human right," state Rep. LaTanya Garrett (D-Detroit) said. "Many of our urban communities have succumb to various water issues. We have a due diligence to work tirelessly to provide relief to our citizens."

I was thinking about sending this, which is pretty much what I sent to NPR:

Hello Laura,

I'm happy to help.

Flint residents need to have access to safe, clean water. Gov. Snyder and the administration have been working closely with the mayor and city leaders to focus on health issues affecting children and other city residents, and address water infrastructure challenges.

Gov. Snyder in October created an action plan that focuses on increasing water testing, offering additional precautions for families with lead plumbing in their homes, and providing long-term solutions to address the city's water infrastructure challenges. The plan was created at Snyder's direction by the Michigan Departments of Environmental Quality and Health and Human Services, the U.S. Environmental Protection Agency, and the city of Flint.

The plan builds upon ongoing work with local, state and federal agencies and our partnership with city and community leaders. Together, we are working to ensure that all Flint residents have accurate information and know that help is available to address potential problems. You can find a link to a release about the action plan here: http://www.michigan.gov/snyder/0,4668,7-277-57577_57657-366315--,00.html

The state also has offered more than $10 million in grants and other financial assistance to cover part of the payment for the temporary switch to the Great Lakes Water Authority until Flint's new water source is ready to go online as well as efforts to improve existing city water infrastructure and purchase water filters for residents.

The governor also appointed a bipartisan task force charged with reviewing all of the city, state and federal government actions and recommending changes looking forward that can address potential challenges in Flint and other cities. Information about the task force is here: http://www.michigan.gov/snyder/0,4668,7-277-57577_57657-367761--,00.html

There is a website with a considerable amount of information about testing results here: www.michigan.gov/flintwater

I **strongly recommend** that you look at the most recent release from our Department of Health and Human Services, which focuses on the most recent testing data: http://www.michigan.gov/mdhhs/0,5885,7-339-73970_71692-371199--,00.html

For your background, the action plan includes:

* Testing in Flint public schools immediately to ensure that drinking water is safe, with testing also available at no cost to any other school in Flint.
* Offering free water testing to Flint residents to assure their drinking water is safe.
* Providing free water filters to residents.
* Expanding health exposure testing of individual homes.
* Accelerating corrosion controls in the Flint drinking water system.

* Accelerating water system improvements to address replacing lead service lines.
* Expediting the completion of the Karegnondi Water Authority pipeline.
* Expanding a Safe Drinking Water Technical Advisory Committee to ensure the best technology, practices and science are being followed by adding an expert from the Environmental Protection Agency's Office of Research and Development to the group.
* Naming Dr. Eden Wells, chief medical executive for the Michigan Department of Health and Human Services, as the Flint drinking water public health adviser.
* Boosting a comprehensive lead education program to make sure residents have detailed information about how to protect themselves and their homes.

Subject: Query on deadline from the Rachel Maddow Show

Hi, Ms. Wurfel and Mr. Murray,

I'm writing from the Rachel Maddow Show, on MSNBC. We are working on a story about the water situation in Flint for tonight, and we have a few questions.

-When did the governor's office become aware of reports that lead levels were rising in Flint water?

-When did the governor's become aware of the EPA interim report showing high levels of lead in Flint and inadequacies with the city's testing?

-When did the governor's office become aware of the testing in which two samples were ruled out and the result was that Flint water met EPA guidelines, as reported by Michigan Radio?

-Does the governor take responsibility for any part of what has happened in Flint? If so, what part or parts?

-What are the governor's next steps in addressing the crisis?

Thank you for fielding these.

That is correct. And there should be a breakdown of adults and children later in the release. Those are the figures for the number of people who are above the federal action level. In those cases, DHHS staff members work directly the individuals to determine the source of the lead in the home, be it a particular faucet or pipes, or non-water factors such paint.

You'll note the historical data, showing the seasonal increases. There historically are higher levels reported in the summer months, for a variety of reasons.

Hello Laura,

I'm happy to help.

Flint residents need to have access to safe, clean water. Gov. Snyder and the administration have been working closely with the mayor and city leaders to focus on health issues affecting children and other city residents, and address water infrastructure challenges.

Gov. Snyder in October created an action plan that focuses on increasing water testing, offering additional precautions for families with lead plumbing in their homes, and providing long-term solutions to address the city's water infrastructure challenges. The plan was created at Snyder's direction by the Michigan Departments of Environmental Quality and Health and Human Services, the U.S. Environmental Protection Agency, and the city of Flint.

The plan builds upon ongoing work with local, state and federal agencies and our partnership with city and community leaders. Together, we are working to ensure that all Flint residents have accurate information and know that help is available to address potential problems. You can find a link to a release about the action plan here: http://www.michigan.gov/snyder/0,4668,7-277-57577_57657-366315--,00.html

The state also has offered more than $10 million in grants and other financial assistance to cover part of the payment for the temporary switch to the Great Lakes Water Authority until Flint's new water source is ready to go online as well as efforts to improve existing city water infrastructure and purchase water filters for residents.

The governor also appointed a bipartisan task force charged with reviewing all of the city, state and federal government actions and recommending changes looking forward that can address potential challenges in Flint and other cities. The task force started working in late October, and members expected their work would last for about three months. Members already have made some recommendations, and the Governor has agreed to them. Information about the task force is here: http://www.michigan.gov/snyder/0,4668,7-277-57577_57657-367761--,00.html

There is a website with a considerable amount of information about the state's efforts to work with Flint's leaders and city residents here: www.michigan.gov/flintwater

I **strongly recommend** that you look at the most recent release from our Department of Health and Human Services, which focuses on the most recent testing data: http://www.michigan.gov/mdhhs/0,5885,7-339-73970_71692-371199--,00.html

For your background, the action plan includes:

* Testing in Flint public schools immediately to ensure that drinking water is safe, with testing also available at no cost to any other school in Flint.
* Offering free water testing to Flint residents to assure their drinking water is safe.
* Providing free water filters to residents.
* Expanding health exposure testing of individual homes.
* Accelerating corrosion controls in the Flint drinking water system.
* Accelerating water system improvements to address replacing lead service lines.
* Expediting the completion of the Karegnondi Water Authority pipeline.
* Expanding a Safe Drinking Water Technical Advisory Committee to ensure the best technology, practices and science are being followed by adding an expert from the Environmental Protection Agency's Office of Research and Development to the group.
* Naming Dr. Eden Wells, chief medical executive for the Michigan Department of Health and Human Services, as the Flint drinking water public health adviser.
* Boosting a comprehensive lead education program to make sure residents have detailed information about how to protect themselves and their homes.

One thing we learned through this process is that there are no state or federal regulations requiring schools that are not on wells to test their water. The state has urged all districts conduct testing, and districts have been working with the Michigan Department of Environmental Quality.

One thing we learned through this process is that there are no state or federal regulations requiring schools that are not on wells to test their water. The state has urged all districts conduct testing, and districts have been working with the Michigan Department of Environmental Quality.

Kyle,

Here's a statement. Ron Leix at MSP is the expert on all things procedural on disaster declarations and can be of assistance.

Sent from my iPhone

Begin forwarded message:

> Flint residents need to have access to safe, clean water. Gov. Snyder and the administration have been working closely with Mayor Weaver to focus on health issues affecting children and other city residents, and address water infrastructure challenges.

The state has given more than $10 million in grants and other financial assistance to cover part of the payment for the temporary switch to the Great Lakes Water Authority until Flint's new water source is ready to go online as well as efforts to improve existing city water infrastructure and purchase water filters for residents.

The administration also has in place an action plan that includes increased testing, free filters and other steps to help residents. The governor also appointed a bipartisan task force charged with reviewing all of the city, state and federal government actions and recommending changes looking forward that can address potential challenges in Flint and other cities.

Subject: Edwards Report Response

Importance: High

Do you have an email for Rebecca Williams? Here's the statement for your review:

The Michigan Department of Health and Human Services has been, and continues to be, committed to full disclosure of information regarding the city of Flint and blood lead levels. To suggest otherwise is not consistent with how we have responded.

When initially looking at the citywide and county elevated blood lead level numbers, the increase appeared to be consistent with the routine seasonal fluctuation seen in the summer months. It wasn't until the Hurley report came out that our epidemiologists took a more in-depth look at the data by zip code, controlling for seasonal variation, and confirmed an increase outside of normal trends. As a result of this process, we have determined that the way we analyze data collected needs to be thoroughly reviewed. Our after action report will help determine how we conduct this process in the future.

Our department is focused on ensuring that appropriate case management and follow up is occurring in Flint. Summary reports outlining blood lead level testing are posted online on a bi-weekly basis, and we are working closely with local partners to fulfill data requests as we receive them.

Regarding the FOIA, Mr. Edwards received all of the requested documents, with personal information redacted, on Friday, December 18.

From your story:

The trouble started in 2014 when emergency managers appointed by Michigan Gov. Rick Snyder (R) decided to try saving money by switching Flint's water supply from the Detroit system to the Flint River.

Arthur, this is greatly inaccurate. The city and county governments have been working – for years – to create a new water authority so the Flint area would stop using water from Detroit. There was a 7-1 Flint City Council vote to make the switch to the new source in Lake Huron, which the emergency manager affirmed to support the local wishes.

The Flint River has always been a been the backup source. The original plan from the city was to use Detroit water or a mix of Detroit and Flint River water during construction of the new pipeline. There wasn't an arbitrary decision to "try saving money."

This column from the emergency manager at the time explains the decision behind the switch in great detail.

Senate Minority Leader Jim Ananich Wants More Urgency from Governor, Trained Emergency Coordinator on the Ground

LANSING, Mich. — Senate Minority Leader Jim Ananich (D–Flint) responded to today's release of Flint Water Task Force correspondence. He reiterated specific actions that would help organize efforts with the Flint water crisis, including bringing in a trained emergency management professional to coordinate assistance within the City of Flint.

"Political appointees and public relations people are what got us into this mess, and they aren't who we need leading us out of it," Sen. Ananich said. "Anything less than a professional trained in emergency management or public health will not suffice."

Sen. Ananich requested a crisis responder from the Michigan State Police, the Federal Emergency Management Agency or the Department of Homeland Security.

"Dashboards and nice words won't cut it — our community needs action and answers. While I appreciate that the task force seems to recognize it needs to recommend changes before they release their final report, the administration still doesn't seem to comprehend how devastating this crisis is and that it's far from over," Sen. Ananich said.

In addition to calling for more urgency, Sen. Ananich has pushed for stronger legislative oversight and hearings, and additional resources for those families suffering from lead overexposure.

Senate Minority Leader Jim Ananich Wants More Urgency from Governor, Trained Emergency Coordinator on the Ground

LANSING, Mich. — Senate Minority Leader Jim Ananich (D–Flint) responded to today's release of Flint Water Task Force correspondence. He reiterated specific actions that would help organize efforts with the Flint water crisis, including bringing in a trained emergency management professional to coordinate assistance within the City of Flint.

"Political appointees and public relations people are what got us into this mess, and they aren't who we need leading us out of it," Sen. Ananich said. "Anything less than a professional trained in emergency management or public health will not suffice."

Sen. Ananich requested a crisis responder from the Michigan State Police, the Federal Emergency Management Agency or the Department of Homeland Security.

"Dashboards and nice words won't cut it — our community needs action and answers. While I appreciate that the task force seems to recognize it needs to recommend changes before they release their final report, the administration still doesn't seem to comprehend how devastating this crisis is and that it's far from over," Sen. Ananich said.

In addition to calling for more urgency, Sen. Ananich has pushed for stronger legislative oversight and hearings, and additional resources for those families suffering from lead overexposure.

Subject: RE: Look for a statement

I appreciate the reply.
I have one further question.

In this statement - "the increase appeared to be consistent with the routine seasonal fluctuation seen in the summer months."

BUT according to the data collected and notes provided by Cristin Larder on July 28, 2015 it specifically says:

"Based on the results depicted in Figure 3 positives tests for EBLL were higher than usual for children under age 16 in the City of Flint during the months of July, August and September, 2014."

While I understand a sample size in July can't reflect a direct correlation to the water switch - comparing summer 2014 to previous years AND accounting for seasonal variance - Larder wrote "there does appear to be a high proportion of EBLL last summer than usual"

I guess I am just confused how this report in July is consistent with what the department is saying now?

Subject: RE: Look for a statement

Thanks for your patience on this.

The Michigan Department of Health and Human Services has consistently provided information regarding the city of Flint and blood lead levels.

When initially looking at the citywide and county elevated blood lead level numbers, the increase appeared to be consistent with the routine seasonal fluctuation seen in the summer months. It wasn't until the Hurley report came out that our epidemiologists took a more in-depth look at the data by zip code, controlling for seasonal variation, and confirmed an increase outside of normal trends. As a result of this process, we have determined that the way we analyze data collected needs to be thoroughly reviewed. Additionally, Gov. Rick Snyder has created a Flint Water Task Force to review all city, state and federal responses and actions and is expected to make recommendations moving forward.

The Michigan Department of Health and Human Services is focused on ensuring appropriate case management and follow up in Flint. Summary reports outlining blood lead level testing are posted online on a bi-weekly basis, and we work closely with local partners to fulfill data requests as we receive them.

Regarding the FOIA, Mr. Edwards received all of the requested documents, with personal information redacted, on Friday, December 18.

> Hi Brad: I am working on an update/wrap-up on the Flint water issue. I have a few questions and I am hoping you can provide answers by the end of the day Tuesday. I am also copying two DEQ officials referenced in the questions, in case they want to answer directly. The questions are based on e-mails obtained through FOIA by Virginia Tech researcher Marc Edwards, and by the Michigan ACLU.
>
> 1/ Have any DEQ officials been re-assigned or disciplined in relation to the Flint drinking water issue, other than Liane Shekter Smith?
>
> 2/ Why did Stephen Busch say in a Feb. 27 e-mail to the EPA that Flint had "an optimized corrosion control program" when in fact Flint had no corrosion control program?
>
> 3/ On June 25, Adam Rosenthal of the DEQ's Office of Drinking Water and Municipal Assistance sent an e-mail about the water samples to Michael Glasgow, a utilities administrator with the City of Flint. "Just wanted to remind you/confirm that Flint is on track for a few items," Rosenthal wrote in the e-mail.
>
> "We hope you have 61 more lead/copper samples collected and sent to the lab by 6/30/15, and that they are will be (sic) below the AL (action level) for lead," the e-mail said. "As of now with 39 results, Flint's 90th percentile is over the AL for lead."
>
> Was Rosenthal encouraging Flint to collect samples that would be below the action level for lead? Many people are reading his e-mail that way. Is there any reason why I should not?
>
> 4/ Why was the DEQ strict in 2015 about disqualifying the sample with a high reading from the home of LeeAnne Walters, for the stated reason that she used a water filter, but not strict in disqualifying other samples for other reasons that could have been used, such as that they were not among the 100 homes that were sampled in 2014, or that they did not come from homes at high risk for lead (for example the homes on Flushing Road that had received a new water main in 2007?) Why is it that of the homes sampled in 2014, only homes that had tested below the AL for lead were sampled again in 2015 and none of the homes that had sampled above the AL for lead in 2014 were sampled again in 2015? Were the samples being cherry picked, as some have suggested?

5/ LeeAnne Walters says she never received a promised letter or email that was to follow up with her from the Aug. 4 meeting in Lansing with DEQ officials and aides to the Governor. Was she ever sent the letter, which was to explain to her, among other items, why the sample from her home was disqualified?

Thanks,
Paul Egan

Laura,

At this point, the state has not received a request from the city through the Michigan Emergency Management Act.

We are working with the Mayor and County Commission to help them determine what could be the most effective course for both to receive the most possible federal assistance to help address the city's health issues and water infrastructure needs. There might be other pathways to generate assistance. We are working closely with them to help with this.

Subject: RE: New query from the Rachel Maddow Show

The administration continues to work closely with Mayor Weaver on her request. **Today,** representatives of the Michigan State Police's Emergency Management and Homeland Security Division met with Mayor Weaver and members of the Genesee County Commission to discuss what options would be available to the city and county through the Michigan Emergency Management Act and the federal Stafford Act, and what could be the most effective course for both to receive federal assistance to help address the city's health issues and water infrastructure needs.

At this point, the state has not received a request from the city through the Michigan Emergency Management Act. (And Laura, please don't confuse the Michigan Emergency Management Act with the emergency managers who were running financially distressed cities. As an aside, there were four emergency managers covering cities in Michigan when the governor took office. Soon, there will be none.)

Again, it would be remiss to not mention that the state so far has offered more than $10 million in grants and other financial assistance to cover part of the payment for the temporary switch to the Great Lakes Water Authority until Flint's new water source is ready to go online as well as efforts to improve existing city water infrastructure and purchase water filters for residents.

Subject: RE: New query from the Rachel Maddow Show

Hello, Laura.

I'm not sure you used anything that I sent you the other night.

Flint residents need to have access to safe, clean water. Gov. Snyder and administration members continue to work closely with Mayor Weaver and other city leaders to focus on health issues affecting children and other city residents. And address water infrastructure challenges.

The state so far has offered more than $10 million in grants and other financial assistance to cover part of the payment for the temporary switch to the Great Lakes Water Authority until Flint's new water source is ready to go online as well as efforts to improve existing city water infrastructure and purchase water filters for residents.

The governor also appointed a bipartisan task force charged with reviewing all of the city, state and federal government actions and recommending changes looking forward that can address potential challenges in Flint and other cities. The task force started working in late October, and members expected their work would last for about three months. Members already have made some recommendations, and the Governor has agreed to them.

The state's response includes:

* Testing in Flint public schools immediately to ensure that drinking water is safe, with testing also available at no cost to any other school in Flint.
* Offering free water testing to Flint residents to assure their drinking water is safe.
* Providing free water filters to residents.
* Expanding health exposure testing of individual homes.
* Accelerating corrosion controls in the Flint drinking water system.
* Accelerating water system improvements to address replacing lead service lines.
* Expediting the completion of the Karegnondi Water Authority pipeline.
* Expanding a Safe Drinking Water Technical Advisory Committee to ensure the best technology, practices and science are being followed by adding an expert from the Environmental Protection Agency's Office of Research and Development to the group.
* Naming Dr. Eden Wells, chief medical executive for the Michigan Department of Health and Human Services, as the Flint drinking water public health adviser.
* Boosting a comprehensive lead education program to make sure residents have detailed information about how to protect themselves and their homes.

Dave

The questions are based on e-mails obtained through FOIA by Virginia Tech researcher Marc Edwards, and by the Michigan ACLU.

1/ Have any DEQ officials been re-assigned or disciplined in relation to the Flint drinking water issue, other than Liane Shekter Smith?

2/ Why did Stephen Busch say in a Feb. 27 e-mail to the EPA that Flint had “an optimized corrosion control program” when in fact Flint had no corrosion control program?

3/ On June 25, Adam Rosenthal of the DEQ's Office of Drinking Water and Municipal Assistance sent an e-mail about the water samples to Michael Glasgow, a utilities administrator with the City of Flint. "Just wanted to remind you/confirm that Flint is on track for a few items," Rosenthal wrote in the e-mail.

"We hope you have 61 more lead/copper samples collected and sent to the lab by 6/30/15, and that they are will be (sic) below the AL (action level) for lead," the e-mail said. "As of now with 39 results, Flint's 90th percentile is over the AL for lead."

Was Rosenthal encouraging Flint to collect samples that would be below the action level for lead? Many people are reading his e-mail that way. Is there any reason why I should not?

4/ Why was the DEQ strict in 2015 about disqualifying the sample with a high reading from the home of LeeAnne Walters, for the stated reason that she used a water filter, but not strict in disqualifying other samples for other reasons that could have been used, such as that they were not among the 100 homes that were sampled in 2014, or that they did not come from homes at high risk for lead (for example the homes on Flushing Road that had received a new water main in 2007?) Why is it that of the homes sampled in 2014, only homes that had tested below the AL for lead were sampled again in 2015 and none of the homes that had sampled above the AL for lead in 2014 were sampled again in 2015? Were the samples being cherry picked, as some have suggested?

5/ LeeAnne Walters says she never received a promised letter or email that was to follow up with her from the Aug. 4 meeting in Lansing with DEQ officials and aides to the Governor. Was she ever sent the letter, which was to explain to her, among other items, why the sample from her home was disqualified?

Thanks,
Paul Egan

Subject: RE: New query from the Rachel Maddow Show

Hi, Dave,

The segment got pushed back to today.

Can you tell me, please, whether the governor has received the disaster declaration? Has he made a decision about whether to support, amend or reject it?

If there is anything else new from your office about this story, please let me know.

Thank you again.

Laura

Laura,

At this point, the state has not received a request from the city through the Michigan Emergency Management Act.

We are working with the Mayor and County Commission to help them determine what could be the most effective course for both to receive the most possible federal assistance to help address the city's health issues and water infrastructure needs. There might be other pathways to generate assistance. We are working closely with them to help with this.

Subject: RE: New query from the Rachel Maddow Show

The administration continues to work closely with Mayor Weaver on her request. **Today,** representatives of the Michigan State Police's Emergency Management and Homeland Security Division met with Mayor Weaver and members of the Genesee County Commission to discuss what options would be available to the city and county through the Michigan Emergency Management Act and the federal Stafford Act, and what could be the most effective course for both to receive federal assistance to help address the city's health issues and water infrastructure needs.

At this point, the state has not received a request from the city through the Michigan Emergency Management Act. (And Laura, please don't confuse the Michigan Emergency Management Act with the emergency managers who were running financially distressed cities. As an aside, there were four emergency managers covering cities in Michigan when the governor took office. Soon, there will be none.)

Again, it would be remiss to not mention that the state so far has offered more than $10 million in grants and other financial assistance to cover part of the payment for the temporary switch to the Great Lakes Water Authority until Flint's new water source is ready to go online as well as efforts to improve existing city water infrastructure and purchase water filters for residents.

Subject: RE: New query from the Rachel Maddow Show

Hello, Laura.

I'm not sure you used anything that I sent you the other night.

Flint residents need to have access to safe, clean water. Gov. Snyder and administration members continue to work closely with Mayor Weaver and other city leaders to focus on health issues affecting children and other city residents. And address water infrastructure challenges.

The state so far has offered more than $10 million in grants and other financial assistance to cover part of the payment for the temporary switch to the Great Lakes Water Authority until Flint's new water source is ready to go online as well as efforts to improve existing city water infrastructure and purchase water filters for residents.

The governor also appointed a bipartisan task force charged with reviewing all of the city, state and federal government actions and recommending changes looking forward that can address potential challenges in Flint and other cities. The task force started working in late October, and members expected their work would last for about three months. Members already have made some recommendations, and the Governor has agreed to them.

The state's response includes:

* Testing in Flint public schools immediately to ensure that drinking water is safe, with testing also available at no cost to any other school in Flint.
* Offering free water testing to Flint residents to assure their drinking water is safe.
* Providing free water filters to residents.
* Expanding health exposure testing of individual homes.
* Accelerating corrosion controls in the Flint drinking water system.
* Accelerating water system improvements to address replacing lead service lines.
* Expediting the completion of the Karegnondi Water Authority pipeline.
* Expanding a Safe Drinking Water Technical Advisory Committee to ensure the best technology, practices and science are being followed by adding an expert from the Environmental Protection Agency's Office of Research and Development to the group.
* Naming Dr. Eden Wells, chief medical executive for the Michigan Department of Health and Human Services, as the Flint drinking water public health adviser.
* Boosting a comprehensive lead education program to make sure residents have detailed information about how to protect themselves and their homes.

Dave

#flintwatercrisis

HURLEY CHILDREN'S HOSPITAL

Background & Secondary Prevention

Mona Hanna-Attisha MD MPH FAAP
Hurley Children's Hospital
Michigan State University College of Human Medicine

Agenda

HURLEY CHILDREN'S HOSPITAL

- Flint Water Timeline
- Lead Facts
- Hurley Research Findings
- Introduction to Toxic Stress
- Next steps – Secondary Prevention

Flint Drinking Water Crisis

HURLEY CHILDREN'S HOSPITAL

- Financial Emergency Managers
- Water switch to Flint River (April 2014)
- Fecal coliform and boil advisories *3 (Sept 2014)
- GM stopped using Flint water – corroding parts (Oct 2014)
- Disinfectant byproducts TTHM (Jan 2015-Sept 2015)

Flint Drinking Water Crisis

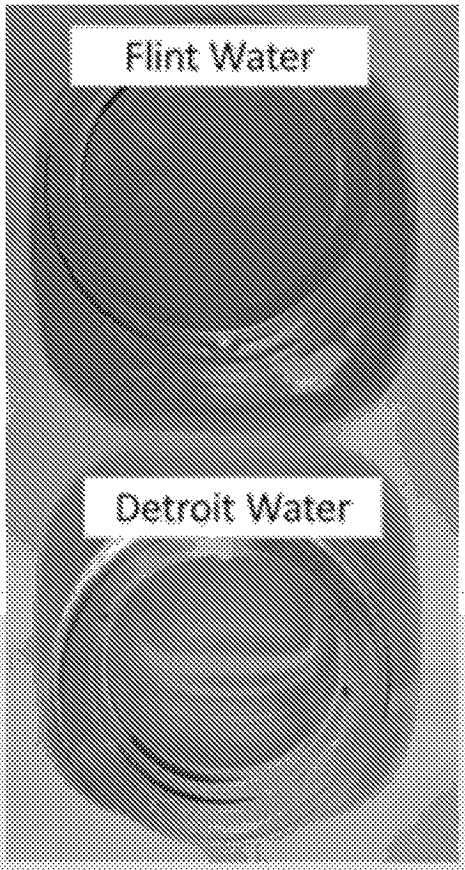
HURLEY CHILDREN'S HOSPITAL

- Perfect storm for lead leaching
  - Flint water more corrosive
  - Lack of corrosion control
  - Aging infrastructure (lead plumbing)
  - Decreased water use - population loss, high water rates

Flint Drinking Water Crisis

HURLEY CHILDREN'S HOSPITAL

- High lead levels detected, EPA contacted (February 2015)
- Leaked EPA memo (June 2015)
  - LeeAnn Walters WLL 13,200 ppb (toxic waste)
- Dr Marc Edwards, Virginia Tech Research (Aug 2015)
  - Flintwaterstudy.org
  - Corrosion & water lead
- Hurley Research (Sept 2015)



https://www.wsws.org/en/articles/2015/09/26/flin-s26.html

Why do we care about lead?

HURLEY CHILDREN'S HOSPITAL

- Lead is a potent neurotoxin with lifelong, multigenerational impacts
- Blood lead levels (BLL) 5 ug/dL or more considered elevated blood lead levels (EBLL)
- Just a few years ago (2012), 10 ug/dL was cutoff
- NO safe blood lead level
- Disproportionately impacts low income and minority children
- Primary prevention is most important

HURLEY MEDICAL CENTER

Primary Prevention

HURLEY CHILDREN'S HOSPITAL

- "Because no measurable level of blood lead is known to be without deleterious effects, and because once engendered, the effects appear to be irreversible in the absence of any other interventions, public health, environmental and housing policies should encourage PREVENTION of all exposure to lead."

"Low Level Lead Exposure Harms Children: A Renewed Call for Primary Prevention." 2012 CDC Advisory Committee on Childhood Lead Poisoning Prevention.

HURLEY MEDICAL CENTER

Impact on cognition

HURLEY CHILDREN'S HOSPITAL

- Vast evidence supports increased likelihood of:
  - Decrease in IQ
    - An increase in BLL from 1 to 4 ug/dL, drops mean IQ -3.7 points
  - Small change in mean IQ, shifts entire population IQ distribution
    - Reduces high achievers IQs (>130) and increases kids with low IQs (<70)
    - Implications for early intervention, special education services, employment, incarceration, life achievement, etc

Lanphear BP et al., Low-level environmental lead exposure and children's intellectual function: an international pooled analysis. Environ Health Perspect. 2005. 113:894-9.
Fewtrell LJ, Pruss-Ustun A, Landrigan P, and Ayuso-Mateos JL, Estimating the global burden of disease of mild mental retardation and cardiovascular diseases from environmental lead exposure. Environmental Research, 2004. 94:120-33.

Impact on behavior

HURLEY CHILDREN'S HOSPITAL

- Increased likelihood of :
  - ADHD behaviors
  - Delinquent behaviors and arrests
  - Total arrests and increased rates of arrests involving violent offenses
  - Other health effects: hematologic, cardiovascular, immunologic, endocrine, etc

Wright, JP, KN Dietrich, MD Ris, et al. 2008. Association of prenatal and childhood blood lead concentrations with criminal arrests in early adulthood. *PLoS Med* 5(5): e101
Chen, A, B Cai, KN Dietrich, et al. 2007. Lead exposure, IQ, and behavior in urban 5-7 year-olds: Does lead affect behavior only by lowering IQ? *Pediatrics* 119(3): e650-e658.
Needleman, HL, C McFarland, RB Ness, et al. 2002. Bone lead levels in adjudicated delinquents: A case control study. *Neurotoxicology and Teratology* 24(6):711-717.

HURLEY MEDICAL CENTER

Cost

HURLEY CHILDREN'S HOSPITAL

- "For childhood lead poisoning, $5.9 billion in medical care costs, as well as an additional **$50.9 billion** (sensitivity analysis: $44.8–$60.6 billion) per year in lost economic productivity resulting from reduced cognitive potential from preventable childhood lead exposure."

- "The present value of Michigan's economic losses attributable to lead exposure in the 2009 cohort of 5 year-olds ranges from $3.19 (using U.S. blood lead levels) to **$4.85 billion** (using Michigan blood lead levels) per year in loss of future lifetime earnings."

Leonardo Trasande and Yinghua Liu. Reducing The Staggering Costs Of Environmental Disease In Children, Estimated At $76.6 Billion In 2008. *Health Affairs*, 30, no.5 (2011):863-870

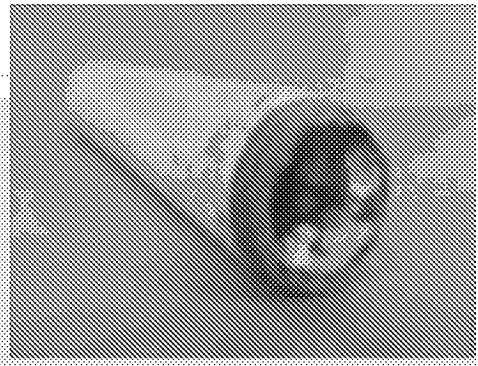
The Price of Pollution: Cost Estimates of Environment-Related Childhood Diseases in Michigan. 2010 Report by Michigan Network of Children's Environmental Health

HURLEY MEDICAL CENTER

Lead in Water

HURLEY CHILDREN'S HOSPITAL

- Not what medicine/public health used to
  - Lead paint obsessed
  - "drinking through a lead painted straw"
- Soluble metal – ingestion via particulate or dissolved in water
- Drinking and cooking risks



Lead in water

HURLEY CHILDREN'S HOSPITAL

- Disproportionally impacts developmentally-vulnerable formula-fed infants
  - For about 25% of infants drinking formula made from tap water at 10 ppb, blood lead would rise >= 5 ug/dL
- Significant risk to unborn babies
  - Increase in fetal deaths and reduced birth weights

Triantafyllidou, S., Gallagher. D. and Edwards, M. Assessing risk with increasingly stringent public health goals: the case of water lead and blood lead in children. Journal of Water and Health. doi: 10.2166/wh.2013.067 58-68 (2014).
Edwards, M. Fetal Death and Reduced Birth Rates Associated with Exposure to Lead-Contaminated Drinking Water. Env. Sci. and Tech. 2013 DOI: 10.1021/es4034952

Hurley Children's RESEARCH FINDINGS

Sept 24

Medical Community Press Conference

HURLEY MEDICAL CENTER

Methods

HURLEY CHILDREN'S HOSPITAL

- HMC IRB approved
- Data from all blood lead levels processed at Hurley Medical Center
- ZIP code based
- Two periods of comparison (same seasons):
  - PRE-SWITCH: January 1, 2013 – September 15, 2013
    - WATER SWITCH APRIL 26, 2014
  - POST-SWITCH: January 1, 2015 – September 15, 2015
- Analyzed % Elevated Blood Lead (EBLL)
  - EBLL = Blood lead Levels >= 5 ug/dL

HURLEY MEDICAL CENTER

Initial Research Results

HURLEY CHILDREN'S HOSPITAL

- Zip code based (in media)

	ALL FLINT ZIPS (n=1746)	HIGH-WLL FLINT ZIPs (48503-48504) (n=742)	NON-FLINT ZIPS (n=1670)
PRE-SWITCH	2.1%	2.5%	0.6%
POST-SWITCH	4.0%	6.3%	1.0%

HURLEY MEDICAL CENTER

GEOcoded Analysis

HURLEY CHILDREN'S HOSPITAL

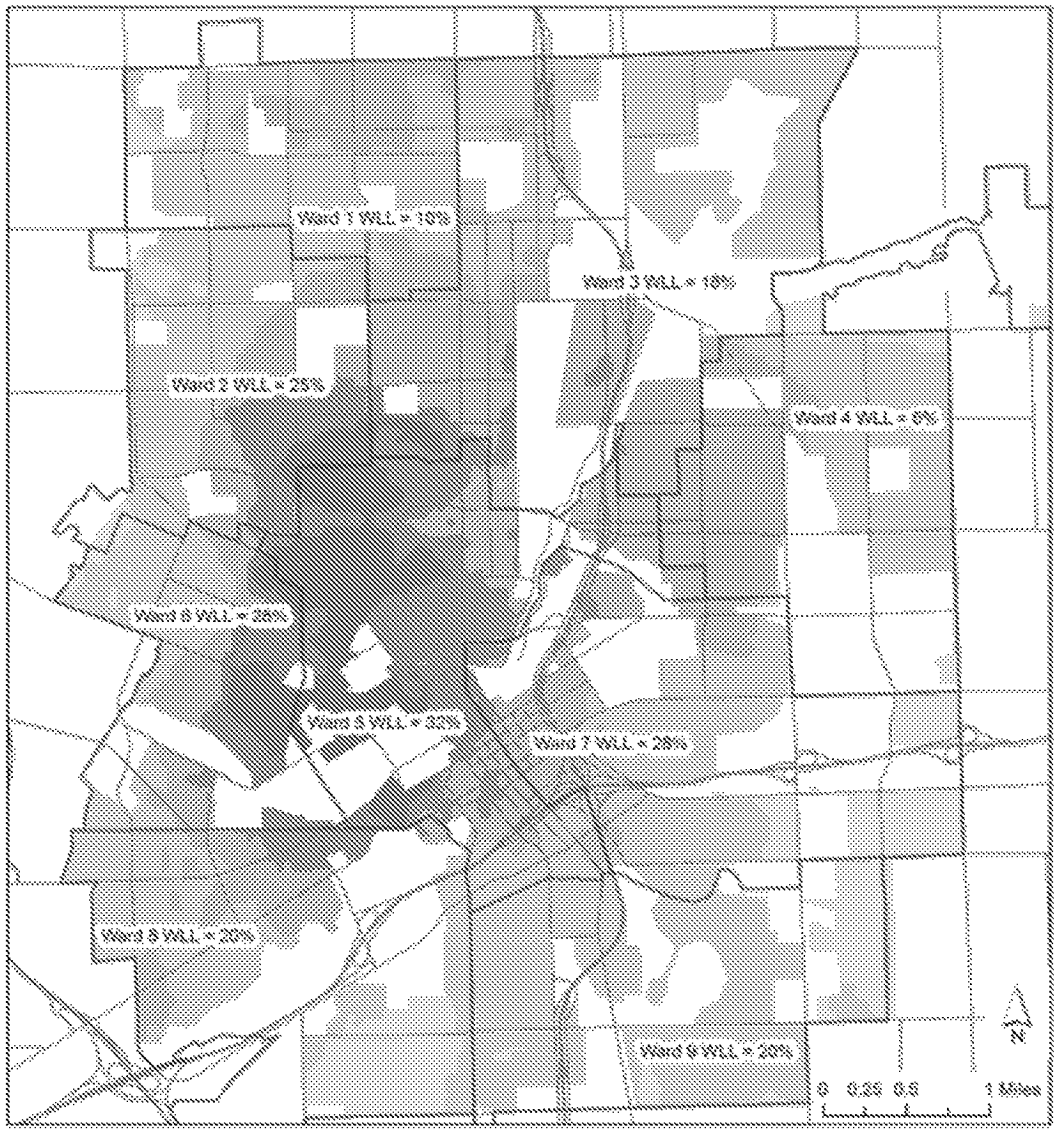
- N= 1473 for Flint water children (pre n=736, post n=737)
- N= 2202 for non-Flint water children (pre n=1210, post n=992)

Flint results for children 5 years and under:

- PRE-SWITCH % EBLL: **2.4%**
- POST-SWITCH % EBLL: **4.9%**
- **p < 0.05; STATISTICALLY SIGNIFICANT CHANGE**

HURLEY MEDICAL CENTER

HURLEY CHILDREN'S HOSPITAL



- Focus on high WLL wards (5, 6, 7); ie., those with high water lead levels

Results:

- PRE-SWITCH % EBLL: **4.0%**
- POST-SWITCH % EBLL: **10.6%**
- **$p < 0.05$; STATISTICALLY SIGNIFICANT CHANGE**

- Note: Hot spots between wards/zips

Research results

- % of children with EBLL in Flint zips increased
  - Most striking increase in areas with highest water lead levels
- **Results significantly underestimate exposure:**
  - Infants not screened for lead
  - BLL may have peaked before being measured (blood half life 20-30 days)
  - Kids exposed in different settings throughout city
- Widened disparities
- Failure of primary prevention

What happened next?

- Sept 25 City of Flint Lead Health Advisory
- Sept 29 GCHD Health Advisory
- Oct 1 GCHD Public Health Emergency
- Oct 2 State filter program, increased water testing, expedited corrosion control
  - Oct 3 First filter distribution
- Oct 8 Three schools toxic WLL, announced reconnection to DWSD
- Oct 16 Water switched back to DWSD

Epigenetics

HURLEY CHILDREN'S HOSPITAL

Wayne State Researchers Discover Evidence That Lead Exposure in Mothers Can Affect Future Generations

Released: 2-Oct-2015 3:05 PM EDT
Source Newsroom: Wayne State University Division of Research

"A team of researchers at Wayne State University have discovered that mothers with high levels of lead in their blood not only affect the fetal cells of their unborn children, but also their grandchildren. "

HURLEY MEDICAL CENTER

Now

- Preventable population-wide exposure
- Community traumatized
- Loss of trust in government and agencies
  - In 2015, in the middle of the great lakes, no guarantee of safe drinking water
- Ongoing public health emergency

Exposed Population

HURLEY CHILDREN'S HOSPITAL

- Currently identifying/labeling exposed population
- Cohort includes all children less than 6 years who at any time lived in Flint water limits (geocoded) from April 2014 to end date unknown (extend 9 months for fetal exposure).
- Per census data, approx. 8,000-9,000 children

HURLEY CHILDREN'S HOSPITAL

Quick Introduction to ACEs/Toxic Stress…

HURLEY MEDICAL CENTER

Adverse Childhood Experiences (ACEs)

HURLEY CHILDREN'S HOSPITAL

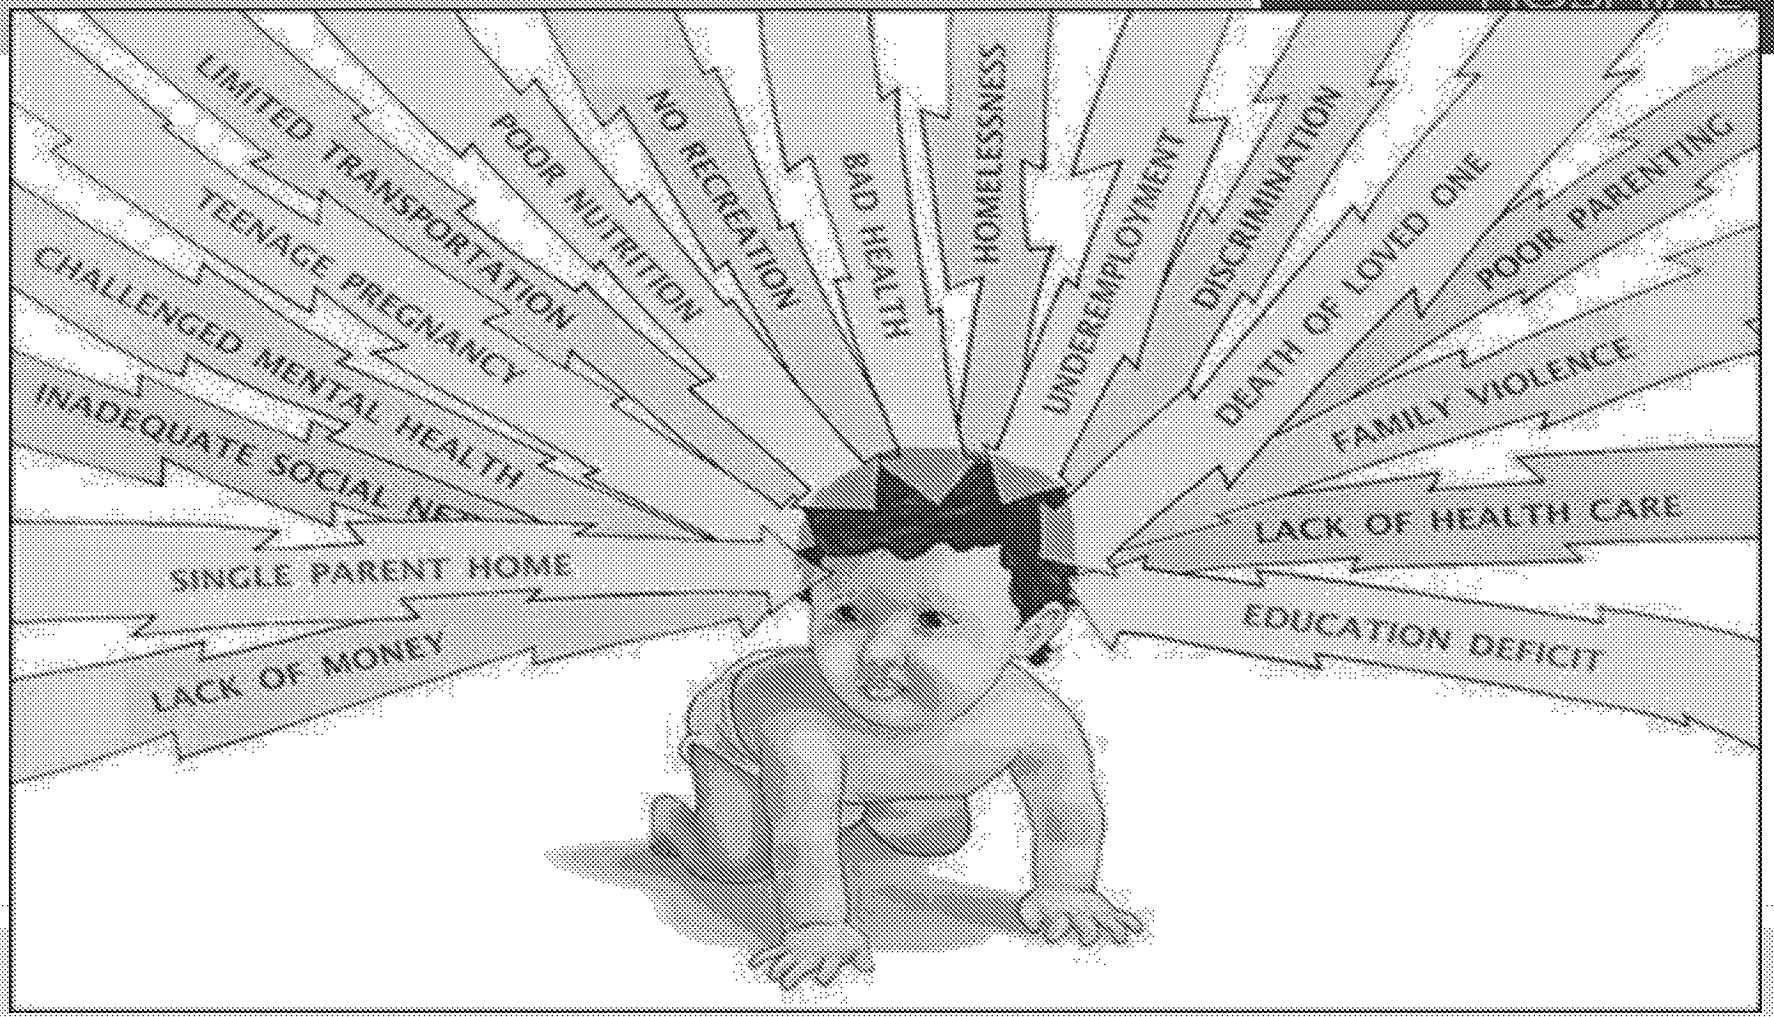
- ACEs are potentially traumatic events that can have negative, lasting effects on health and well-being.
- Also referred to as toxic stress or childhood trauma.
- As number of ACEs increase, the risk for health problems increase in a strong and graded fashion.
- An ACE score of 6 or more results in a 20 year decrease in life expectancy.

- CDC ACE study
  - Kaiser Permanente from 1995 to 1997 with more than 17,000 participants.

HURLEY MEDICAL CENTER

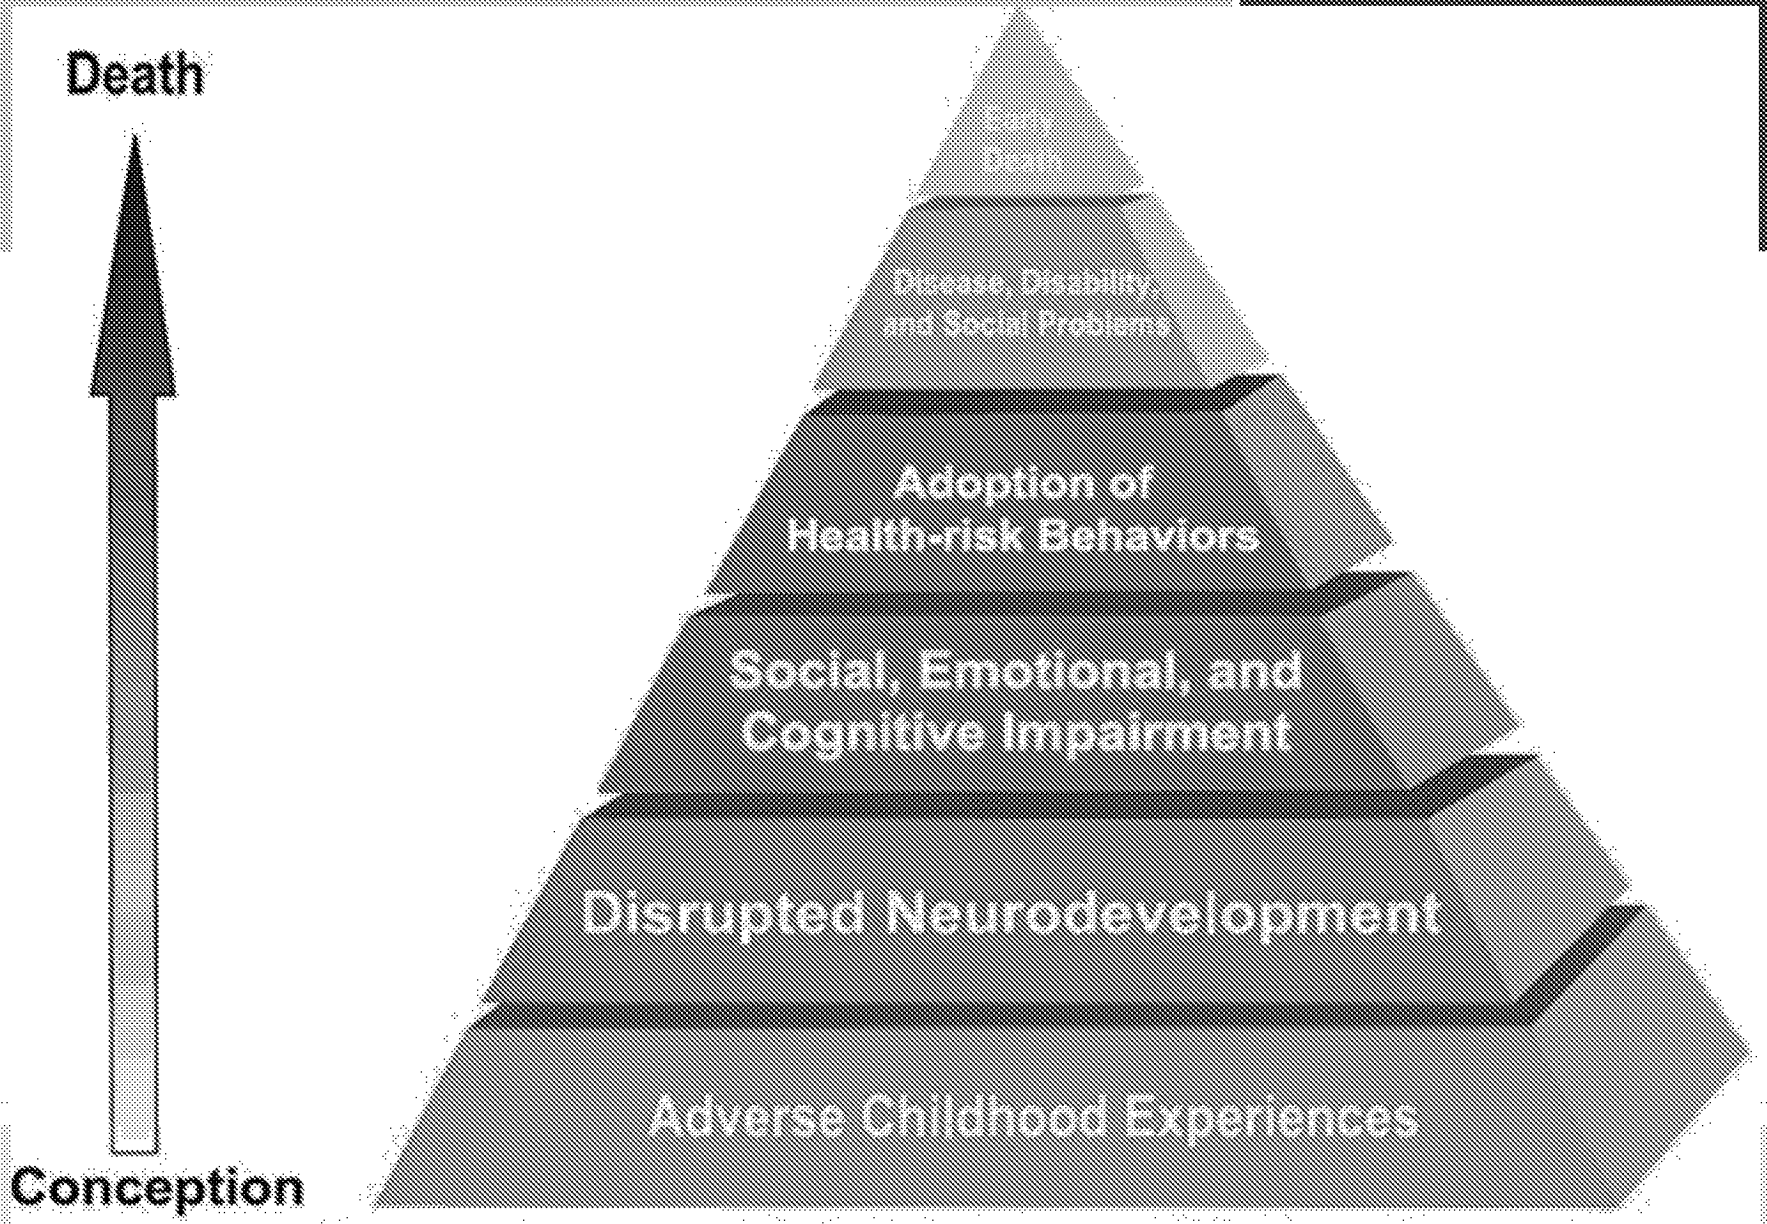
Toxic Stresses

HURLEY CHILDREN'S HOSPITAL



https://casaofsantacruz.wordpress.com/2014/10/08/continuing-education-webinar-how-toxic-stress-impacts-cas-children-families-communities-2/

HURLEY MEDICAL CENTER



Mechanisms by Which Adverse Childhood Experiences Influence Health and Well-being Throughout the Lifespan

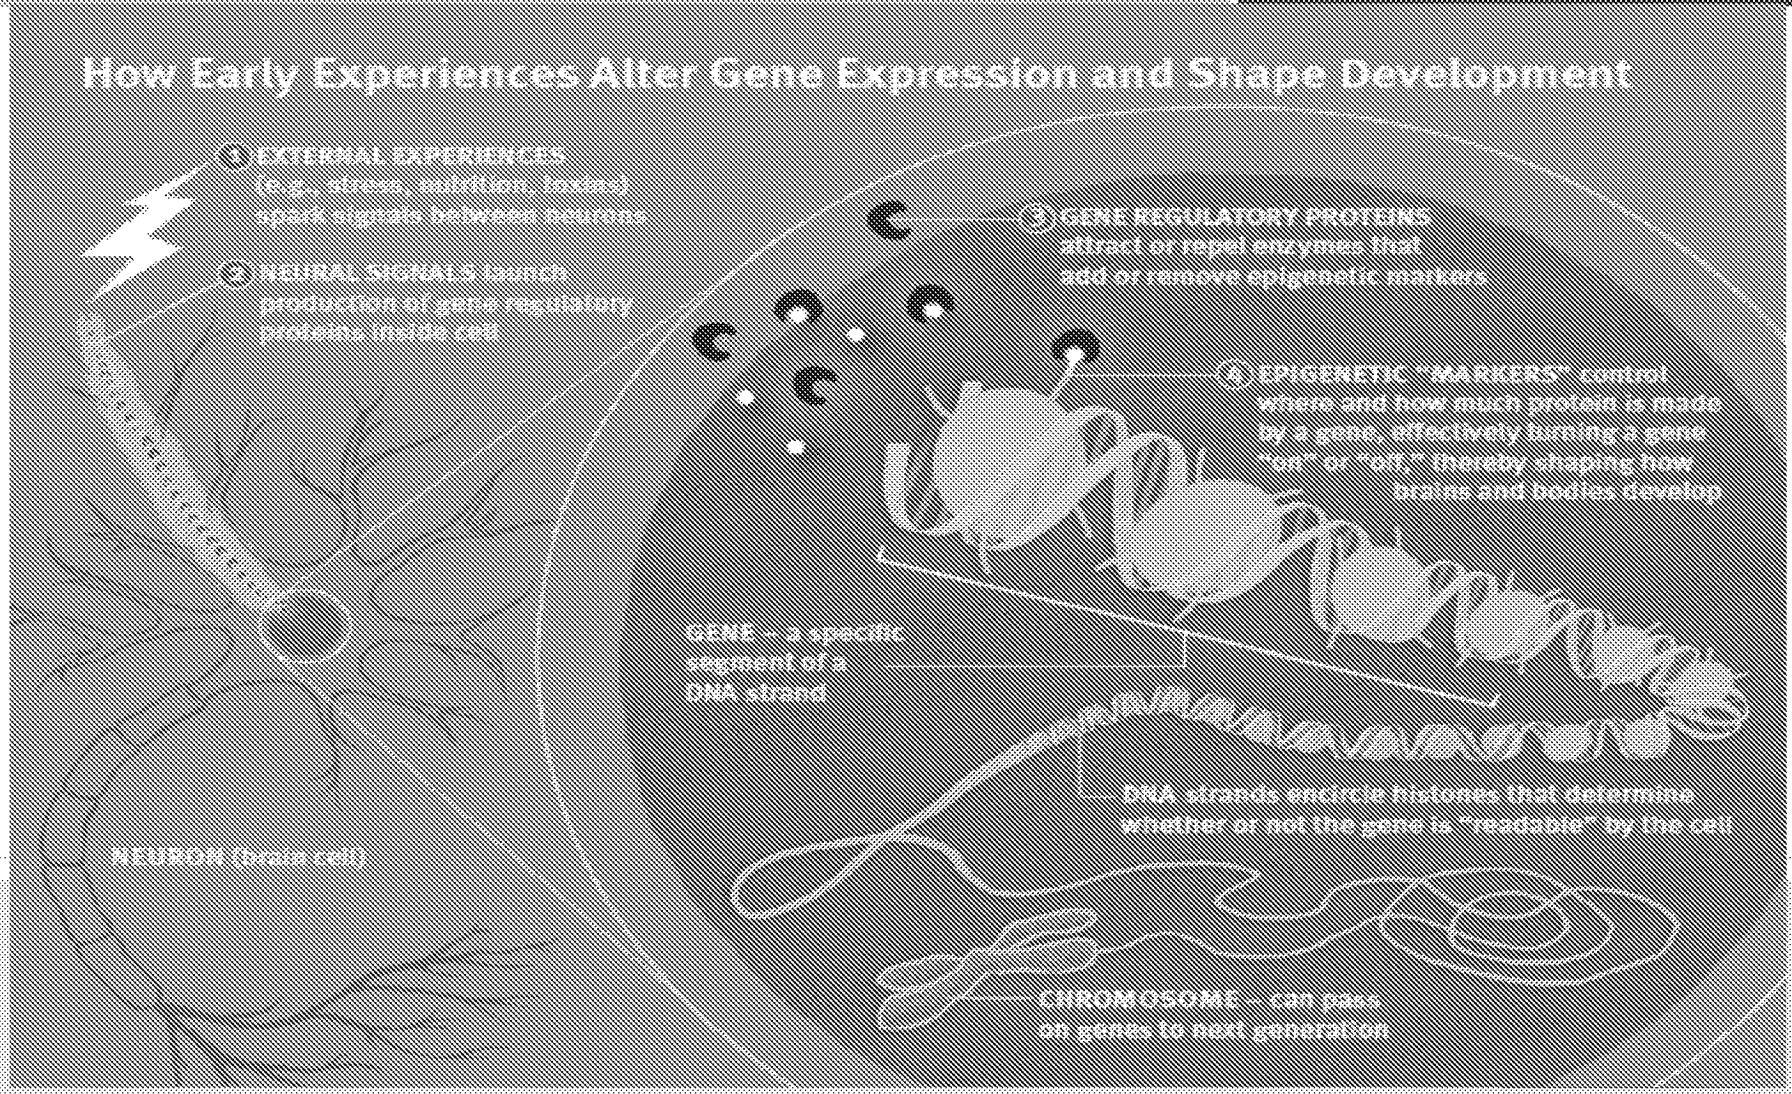
EPIGENETICS

HURLEY CHILDREN'S HOSPITAL



http://developingchild.harvard.edu/science/deep-dives/gene-environment-interaction/

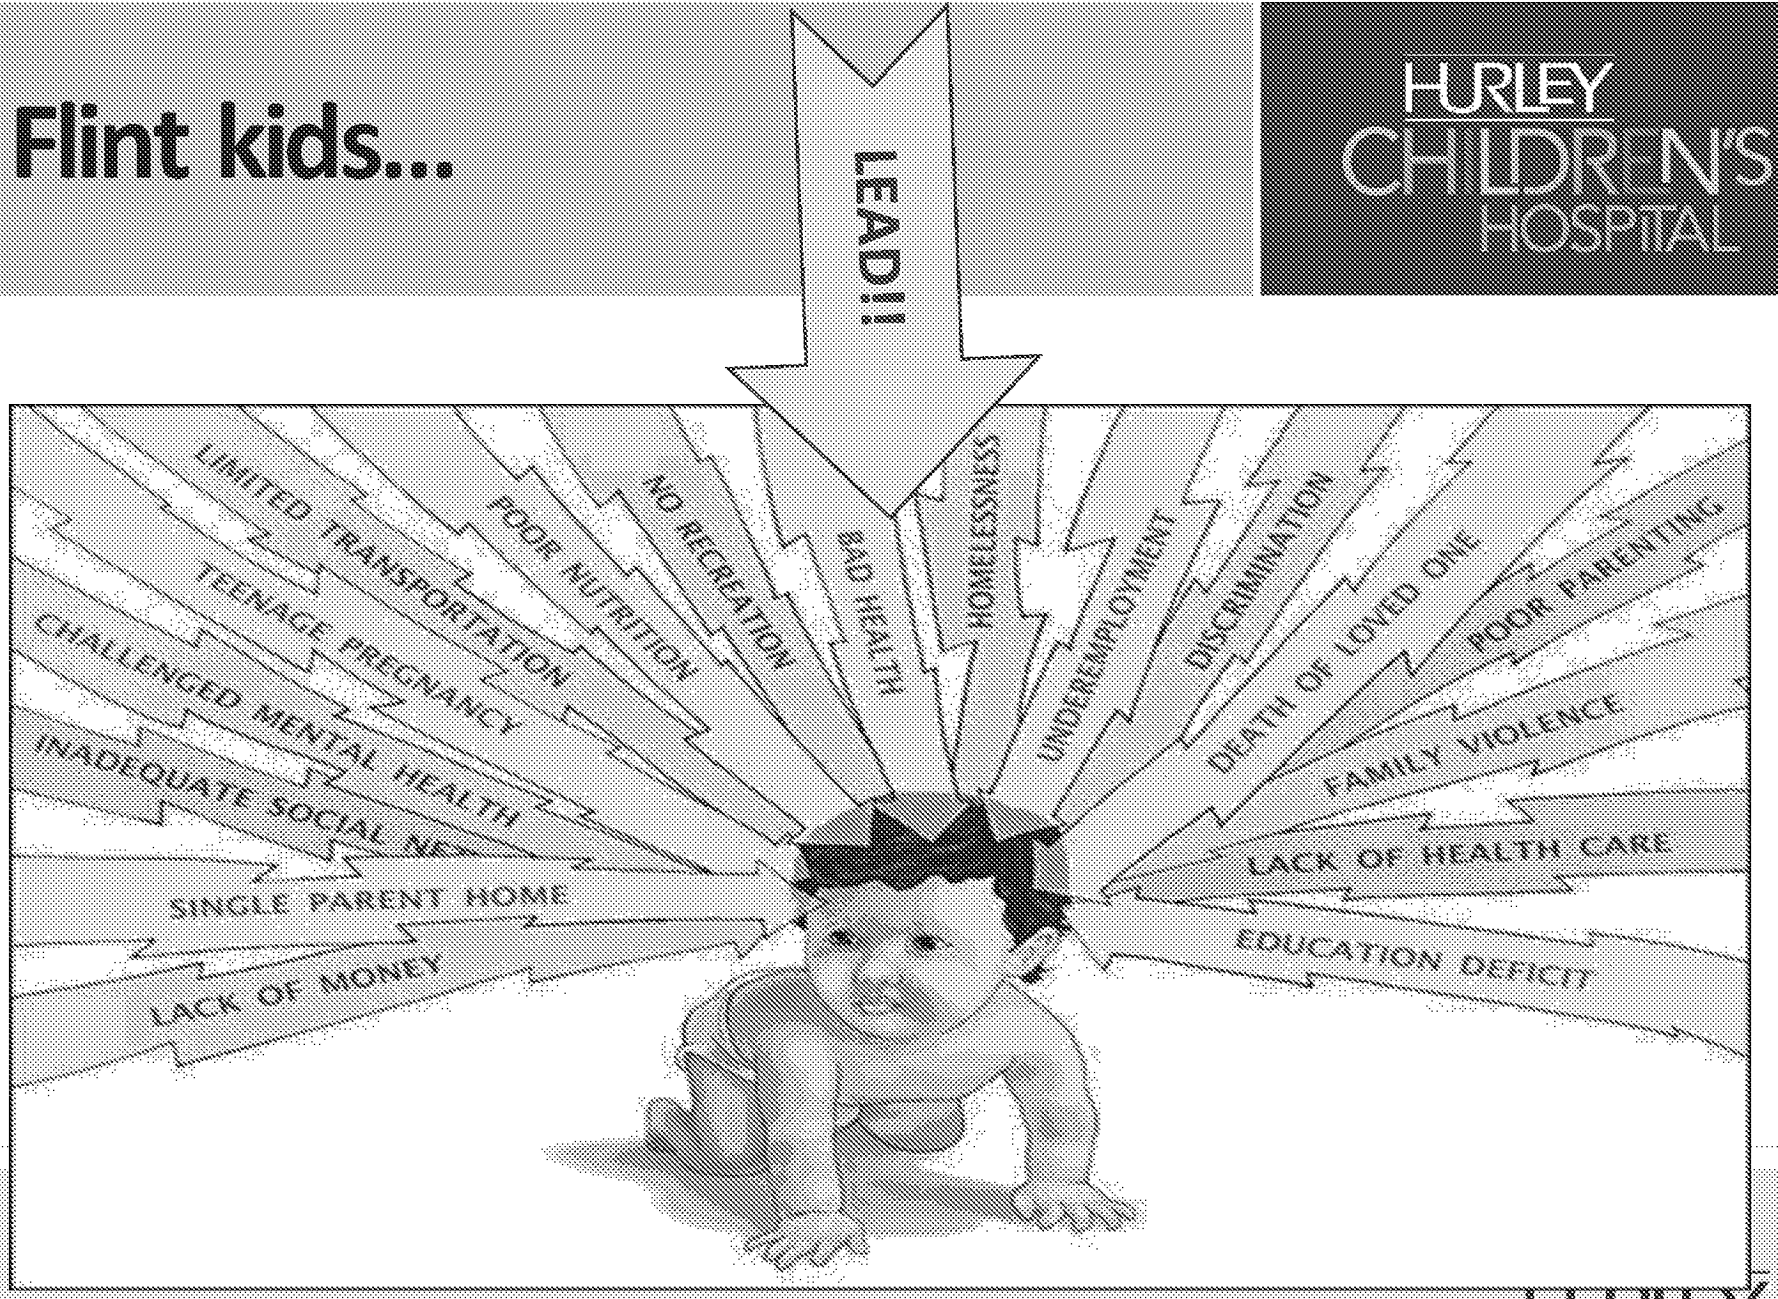
ACE/Toxic Stress

HURLEY CHILDREN'S HOSPITAL

- Many chronic diseases/disparities in adults are determined decades earlier, by experiences in childhood (0-6 critical)
- Lead exposure is an ACE/toxic stress

Flint kids...

HURLEY CHILDREN'S HOSPITAL



HURLEY MEDICAL CENTER

- Now what can we do???

Research/Assessment

HURLEY CHILDREN'S HOSPITAL

- Assess the impact of the exposure
  - Health impact
    - BLL
    - Longitudinal neurodevelopmental f/u
    - Cord blood Pb, brain injury markers, epigenetics
    - Retrospective fetal deaths, IUGR
  - Nutrition impact
  - Psychosocial impact
  - Water quality/infrastructure impact
- Continued monitoring
  - Academic/public health collaborations

HURLEY MEDICAL CENTER

Secondary Prevention

HURLEY CHILDREN'S HOSPITAL

- Unique opportunity to be proactive, to regain public trust, and to **buffer** impact of exposure
  - Short Term
  - Long Term

HURLEY MEDICAL CENTER

Short-Term Secondary Prevention

HURLEY CHILDREN'S HOSPITAL

- Consistent, coordinated, multi-method, trusted messaging/education/risk communication/PSAs
  - Need for central command/hub/emergency response

Short-Term Secondary Prevention

HURLEY CHILDREN'S HOSPITAL

- Water still not safe (public health emergency)
  - Corrosion control optimization
  - Ongoing risk from scale disruption
  - Door to door filter/replacement distribution
    - # filters distributed approx 1/3 of homes
  - Public education re water precautions (filters, flushing, cold water, cooking, infants, etc)
  - Lead plumbing

HURLEY CHILDREN'S HOSPITAL

Hi Gary,

Looking back, I'm not sure I was clear in my response about one point.

We are committed to protecting the health of children in Flint now and into the future, and helping anyone who has been affected by the water challenges in Flint. We're already taking the steps called for in Gov. Snyder's action plan, and are working with the Flint Water Task Force to see what additional actions it recommends to help children and adults and address any issues that were created by this situation.

Is that more clear? Let me know.

Dave,
I appreciate the quick response. But, I need to follow up since some things have changed since my previous email.

I just sat down with U.S. Rep. Dan Kildee who is calling for a locally-managed, state-funded health fund that would help identify and track health issues for those kids potentially impacted by the lead situation.

Would the governor be on board with this idea? Has he had discussions on creating this sort of fund?

Thanks again.

Subject: RE: Stabenow comment on Flint water

Hello, Gary,

Flint residents need to have access to safe, clean water. Gov. Snyder and administration members continue to work closely with Mayor Weaver and other city leaders to focus on health issues affecting children and other city residents, and address water infrastructure challenges.

The state so far has offered more than $10 million in grants and other financial assistance to cover part of the payment for the temporary switch to the Great Lakes Water Authority until Flint's new water source is ready to go online as well as efforts to improve existing city water infrastructure and purchase water filters for residents.

The governor also appointed a bipartisan task force charged with reviewing all of the city, state and federal government actions and recommending changes looking forward that can address potential challenges in Flint and other cities.

Paul, Thanks for the inquiry.

Most of these questions regard issues presently before the Governor's independent after action review panel. We don't want to get in front of that review. With the review group taking a close look at the past, the DEQ is now focused on present and future challenges related to implementing the Governor's 10-point plan.

To your final question, the department went through DTMB to confirm that the reply to Ms. Walters was sent to her email address and received by that address. I can forward it if you need to see it.

Cc: Rosenthal, Adam (DEQ); Busch, Stephen (DEQ)
Subject: Flint water

Hi Brad: I am working on an update/wrap-up on the Flint water issue. I have a few questions and I am hoping you can provide answers by the end of the day Tuesday. I am also copying two DEQ officials referenced in the questions, in case they want to answer directly. The questions are based on e-mails obtained through FOIA by Virginia Tech researcher Marc Edwards, and by the Michigan ACLU.

1/ Have any DEQ officials been re-assigned or disciplined in relation to the Flint drinking water issue, other than Liane Shekter Smith?

2/ Why did Stephen Busch say in a Feb. 27 e-mail to the EPA that Flint had "an optimized corrosion control program" when in fact Flint had no corrosion control program?

3/ On June 25, Adam Rosenthal of the DEQ's Office of Drinking Water and Municipal Assistance sent an e-mail about the water samples to Michael Glasgow, a utilities administrator with the City of Flint. "Just wanted to remind you/confirm that Flint is on track for a few items," Rosenthal wrote in the e-mail.

"We hope you have 61 more lead/copper samples collected and sent to the lab by 6/30/15, and that they are will be (sic) below the AL (action level) for lead," the e-mail said. "As of now with 39 results, Flint's 90th percentile is over the AL for lead."

Was Rosenthal encouraging Flint to collect samples that would be below the action level for lead? Many people are reading his e-mail that way. Is there any reason why I should not?

4/ Why was the DEQ strict in 2015 about disqualifying the sample with a high reading from the home of LeeAnne Walters, for the stated reason that she used a water filter, but not strict in disqualifying other samples for other reasons that could have been used, such as that they were not among the 100 homes that were sampled in 2014, or that they did not come from homes at high risk for lead (for example the homes on Flushing Road that had received a new water main in 2007?) Why is it that of the homes sampled in 2014, only homes that had tested below the AL for lead were sampled again in 2015 and none of the homes that had sampled above the AL for lead in 2014 were sampled again in 2015? Were the samples being cherry picked, as some have suggested?

5/ LeeAnne Walters says she never received a promised letter or email that was to follow up with her from the Aug. 4 meeting in Lansing with DEQ officials and aides to the Governor. Was she ever sent the letter, which was to explain to her, among other items, why the sample from her home was disqualified?

Thanks,

Subject: RE: Request of Action Items/Resource Requests

The county advised they will help anyway they can and they are united with the city on this; however, they did not indicate they were going to declare an emergency at the meeting as they have not gotten any specific requests from the city. If the county declares an emergency, they have to provide EMHSD with what **specific** assistance is needed to **supplement** local response and recovery efforts.

I also advised the Mayor that a governors declaration is not needed to provide assistance outside of the Emergency Management Act (for example, the resources already provided by the state). The Act is one mechanism we have to assist but not the only one and not necessarily always the appropriate one to get us to the end state or goal.

It is important to note that a federal declaration of a disaster (under the Stafford Act and what the media keeps saying is needed) is not applicable here as federal disaster declarations (versus federal emergency declarations) are for natural disasters only (not man-made) and the City Administrator, Natasha Henderson, advised everyone this is a man-made event...I think she understands all of this.

Hello Laura,

I've just checked with the Michigan State Police's Emergency Management and Homeland Security Division. No formal request from Genesee County has been made to the state at this point. A district coordinator assigned to that region has been **working closely with city and county leaders**, and will continue to do so. The state remains in close contact with the Mayor and County Commission to help them determine what could be the most effective course for both to receive

the most possible federal assistance to help address the city's health issues and water infrastructure needs. There might be other pathways to obtain federal assistance.

There is something I think you should know about. Today, Lincoln Park was returned to local control. This is the first time **in 15 years** that no Michigan municipality has had oversight from an emergency manager. There are still three school districts with such oversight. Keep in mind that emergency managers have been in place in Michigan for 10 years prior to Gov. Snyder. There appeared to be some confusion about that in the first report.

Cc: Heaton, Anna (GOV); Biehl, Laura (GOV); Holland, Meegan (GOV)
Subject: RE: New query from the Rachel Maddow Show

The administration continues to work closely with Mayor Weaver on her request. **Today,** representatives of the Michigan State Police's Emergency Management and Homeland Security Division met with Mayor Weaver and members of the Genesee County Commission to discuss what options would be available to the city and county through the Michigan Emergency Management Act and the federal Stafford Act, and what could be the most effective course for both to receive federal assistance to help address the city's health issues and water infrastructure needs.

At this point, the state has not received a request from the city through the Michigan Emergency Management Act. (And Laura, please don't confuse the Michigan Emergency Management Act with the emergency managers who were running financially distressed cities. As an aside, there were four emergency managers covering cities in Michigan when the governor took office. Soon, there will be none.)

Again, it would be remiss to not mention that the state so far has offered more than $10 million in grants and other financial assistance to cover part of the payment for the temporary switch to the Great Lakes Water Authority until Flint's new water source is ready to go online as well as efforts to improve existing city water infrastructure and purchase water filters for residents.

Subject: RE: New query from the Rachel Maddow Show

Hello, Laura.

I'm not sure you used anything that I sent you the other night.

Flint residents need to have access to safe, clean water. Gov. Snyder and administration members continue to work closely with Mayor Weaver and other city leaders to focus on health issues affecting children and other city residents. And address water infrastructure challenges.

The state so far has offered more than $10 million in grants and other financial assistance to cover part of the payment for the temporary switch to the Great Lakes Water Authority until Flint's new water source is ready to go online as well as efforts to improve existing city water infrastructure and purchase water filters for residents.

The governor also appointed a bipartisan task force charged with reviewing all of the city, state and federal government actions and recommending changes looking forward that can address potential challenges in Flint and other cities. The task force started working in late October, and members expected their work would last for about three months. Members already have made some recommendations, and the Governor has agreed to them.

The state's response includes:

* Testing in Flint public schools immediately to ensure that drinking water is safe, with testing also available at no cost to any other school in Flint.
* Offering free water testing to Flint residents to assure their drinking water is safe.
* Providing free water filters to residents.
* Expanding health exposure testing of individual homes.
* Accelerating corrosion controls in the Flint drinking water system.
* Accelerating water system improvements to address replacing lead service lines.
* Expediting the completion of the Karegnondi Water Authority pipeline.

* Expanding a Safe Drinking Water Technical Advisory Committee to ensure the best technology, practices and science are being followed by adding an expert from the Environmental Protection Agency's Office of Research and Development to the group.
* Naming Dr. Eden Wells, chief medical executive for the Michigan Department of Health and Human Services, as the Flint drinking water public health adviser.
* Boosting a comprehensive lead education program to make sure residents have detailed information about how to protect themselves and their homes.

Subject: New query from the Rachel Maddow Show

Hi, Dave,

Can you tell us, please, whether the governor has received (or expects to receive) the declaration of disaster from the City of Flint, regarding its water situation? And can you tell us, please, whether the governor intends to support, amend or reject that declaration for the purposes of state and/or federal assistance?

Thank you again for the help.

The transition advisory boards are very, very different from emergency managers, of course. I've been trying to round up the dates for you, but having trouble reaching the experts on that after hours. Will let you know if I can get specifics.

Hello Laura,

I've just checked with the Michigan State Police's Emergency Management and Homeland Security Division. No formal request from Genesee County has been made to the state at this point. A district coordinator assigned to that region has been **working closely with city and county leaders**, and will continue to do so. The state remains in close contact with the Mayor and County Commission to help them determine what could be the most effective course for both to receive the most possible federal assistance to help address the city's health issues and water infrastructure needs. There might be other pathways to obtain federal assistance.

There is something I think you should know about. Today, Lincoln Park was returned to local control. This is the first time **in 15 years** that no Michigan municipality has had oversight from an emergency manager. There are still three school districts with such oversight. Keep in mind that emergency managers have been in place in Michigan for 10 years prior to Gov. Snyder. There appeared to be some confusion about that in the first report.

Hi, Dave,

The segment got pushed back to today.

Can you tell me, please, whether the governor has received the disaster declaration? Has he made a decision about whether to support, amend or reject it?

If there is anything else new from your office about this story, please let me know.

Thank you again.

Laura

Laura,

At this point, the state has not received a request from the city through the Michigan Emergency Management Act.

We are working with the Mayor and County Commission to help them determine what could be the most effective course for both to receive the most possible federal assistance to help address the city's health issues and water infrastructure needs. There might be other pathways to generate assistance. We are working closely with them to help with this.

Subject: RE: New query from the Rachel Maddow Show

The administration continues to work closely with Mayor Weaver on her request. **Today,** representatives of the Michigan State Police's Emergency Management and Homeland Security Division met with Mayor Weaver and members of the Genesee County Commission to discuss what options would be available to the city and county through the Michigan Emergency Management Act and the federal Stafford Act, and what could be the most effective course for both to receive federal assistance to help address the city's health issues and water infrastructure needs.

At this point, the state has not received a request from the city through the Michigan Emergency Management Act. (And Laura, please don't confuse the Michigan Emergency Management Act with the emergency managers who were running financially distressed cities. As an aside, there were four emergency managers covering cities in Michigan when the governor took office. Soon, there will be none.)

Again, it would be remiss to not mention that the state so far has offered more than $10 million in grants and other financial assistance to cover part of the payment for the temporary switch to the Great Lakes Water Authority until Flint's new water source is ready to go online as well as efforts to improve existing city water infrastructure and purchase water filters for residents.

Subject: Updated Flint Blood Lead Report
Attachments: Flint EBL Data Press Release 122315.docx; Flint Blood Testing Report 23Dec15.docx

Hello everyone,

This afternoon we will be issuing the attached press release about the updated Flint blood lead level report, as well as the report itself.

Of note, this report has changed slightly. Under past reports, people with an age of 5 ½ or 17 ½ were rounded up to be in the 6-17 and 18 and older columns because of the way the data was pulled. They are now under the proper categories so while they may have switched which age bracket they fell into, the total numbers remain the same.

Thank you,

Updated summary report on Flint blood lead level data now available

LANSING, Mich. – The Michigan Department of Health and Human Services today issued its bi-weekly summary report on lead testing in Flint. Preliminary data indicate that 43 of 2,182 adults and children tested had elevated blood lead levels since Oct. 1.

"In partnership with the Genesee County Health Department, we are working to engage and provide resources to residents to reduce all potential exposures to lead," said Dr. Eden Wells, MDHHS chief medical executive. "Case management and home lead analysis are available for families in which an elevated blood lead level has been detected."

The first MDHHS summary report on blood lead levels in Flint was issued Dec. 3, 2015. Updated reports are posted on a bi-weekly basis on the www.michigan.gov/flintwater website. After refining our methods to identify age, some people are now counted in a different age group than on previous reports. The total counts for each year have not changed.

The report includes both capillary and venous blood tests, and people who have had multiple tests are counted only once. Tests and their results cover the time since the state action plan was put in place on Oct. 2, and capture the number of elevated blood lead levels greater than 5 micrograms per deciliter.

MDHHS, together with the Genesee County Health Department (GCHD), is working with local partners to distribute educational information around lead testing and prevention. Supplemental state dollars are funding GCHD nurses to work with families when an elevated blood lead level is detected.

Families with an elevated blood lead level can also choose to have a nurse coordinate an environmental health investigation in their home to help identify lead exposures, which could be lead from paint, soil, plumbing, and other sources. Families with questions about their blood lead levels or test results are also encouraged to contact their primary care physician or local health department.

In addition to mandated testing at ages one and two for the Medicaid population, MDHHS is coordinating with its Medicaid health plans and provider communities to recommend blood lead testing for any child younger than six years of age in Flint who has not previously been tested. The state, in coordination with GCHD, developed and issued a Health Alert Network (HAN) notification for local providers to help ensure consistent messaging and protocols among primary care providers.

-MORE-

Free water filters and replacement cartridges are available to Flint residents. For a full list of locations and hours of distribution, or to view the full blood lead level report, visit www.michigan.gov/flintwater. The summary will be updated as more data becomes available.

To help residents properly install water filters, and to demonstrate how to replace the original when it expires, MDHHS has created an instructional video on its YouTube channel. For this and other updates, visit www.michigan.gov/flintwater.

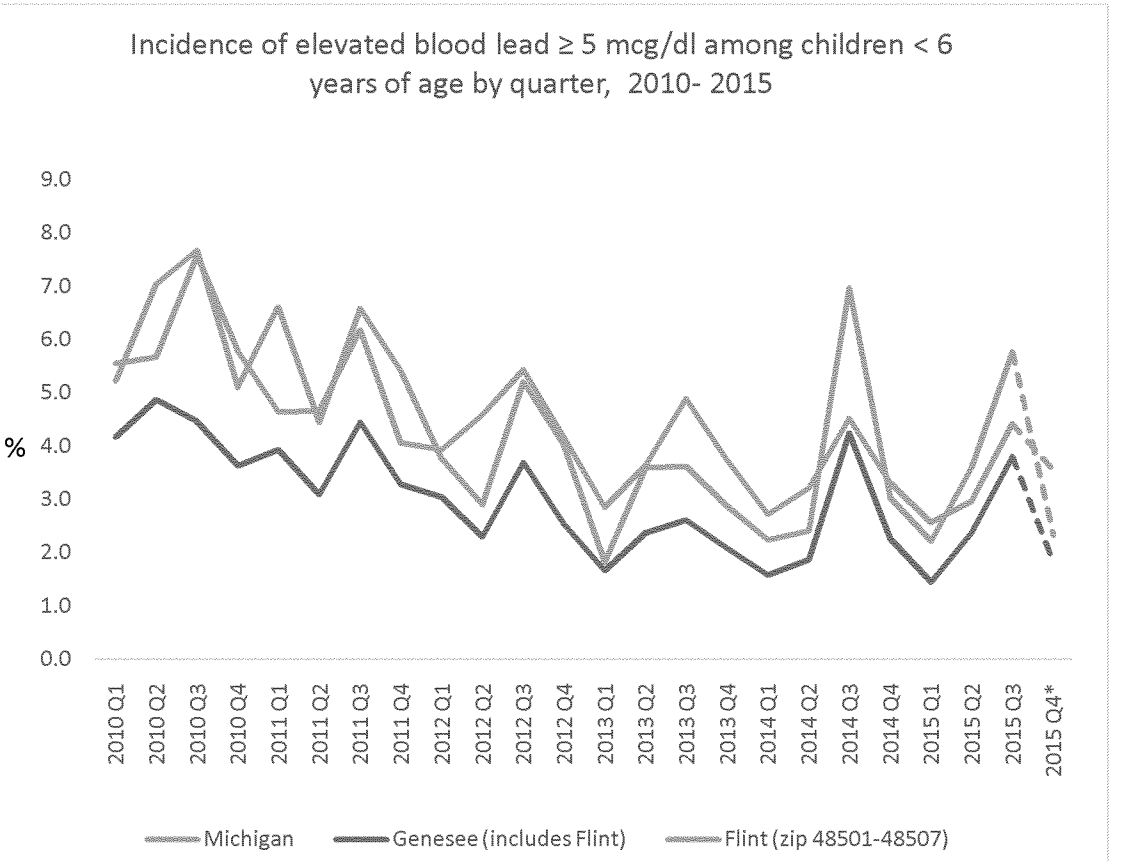
Michigan Department of Health and Human Services (MDHHS)
Blood Lead Level Test Results for Flint Zip Codes 48501-48507, Genesee County, and the State of Michigan
Summary as of December 18, 2015

Executive Summary

This report is generated by MDHHS to track Blood Lead Level test results in Flint, Michigan.

- Counts on this report include both capillary and venous blood tests. People who have had multiple tests are counted only once per year.
- Since 10/1/2015, an additional 2,182 people have been tested in Flint.
- Continued testing efforts by Genesee County Health Department, MDHHS and local medical personnel have identified 30 children with blood lead levels greater than or equal to 5 mcg/dL (micrograms lead per deciliter of blood) since 10/1/2015.
- 2.3 percent of the children younger than 6 years old tested since 10/1/2015 have had blood lead levels greater than or equal to 5 mcg/dL.
- After refining our methods to identify age, some people are now counted in a different age group than on previous reports. The total counts for each year have not changed.



Deduplicated by year,retains test during the time period. *Data for Q4 2015 are incomplete

** Data for Quarter 4 of 2015 are incomplete and subject to change*

	A
1	Data were drawn from the MDHHS datawarehouse based on specimen date.
2	Data in this work book were created using the SAS Code outlined below. Code was modified to create datasets for each year.
3	Deduplication occurred for the time period of the year and at the state level.
4	Highest positive Venous test is retained, if no venous test, highest capillary test is retained, then highest test of unknown type.
5	Age is calculated using date subtraction method to align with the Lead Prevention program data. Previous results used INTCK function to potentially align with Medicaid or other claims data.

Hi, Dave,

Please pardon the late email.

Has the Governor made a decision about Flint's declaration of emergency, or is the office waiting to receive it?

Thank you again.

Laura Conaway

Subject: Re: Checking again

Hello Laura,

We have not received anything yet. I believe the request will come after a vote from the Genesee County Commission. I'm not sure when the commission is slated to meet next. Do you have a contact there?

Gov. Snyder remains committed to working with Mayor Weaver to get Flint residents the assistance they need. Flint residents deserve access to clean, safe water. We also are committed to protecting the health of Flint's children, both immediately and into the future.

As you know, leaders from the Michigan State Police Emergency Management and Homeland Security Division met with the mayor and commission chairman earlier this week to help them determine the best possible pathway to additional state and federal resources.

That assistance will be in addition to the $10 million the state government has committed to Flint residents to help pay for the switch to the Great Lakes Water Authority water, free filters for all residents and additional testing, among other items in Gov. Snyder's action plan.

Dave

Gov. Snyder is committed to working with Mayor Weaver and city leaders to do what is necessary to protect the health of Flint residents.

We're working to build upon the work that already in progress as part of the Governor's action plan and the $10 million provided for the reconnection to Detroit water, filters for residents and efforts to improve the city's water infrastructure.

Take a look at this and then call me. Rich and I worked on this late on Dec. 23 and into Dec. 24. It was then run by senior staff for feedback on Dec. 24 and there have been some tweaks. The statement you'll see in the plan for Dec. 29 is in this document.

DRAFT: FLINT WATER PLAN

Thursday, Dec. 24: Gov. calls Karen Weaver to set up a meeting

Talking points:

"I've read the draft of a report from the state's Office of the Auditor General and I've been briefed on the task force's progress in its ongoing investigation.

"I want to work together with you to get this problem solved. As partners, we can get resources in place more quickly.

"I want to assure you this isn't a political move on my part – I'm a problem solver and I intend to be your partner in addressing this to make it right. I'm truly sorry that all this has happened.

"I have some ideas on how to get more resources for blood lead level testing and remediation – financial as well as state personnel, and I'd like to discuss those with you.

"It sounds like you have a block of time available on the morning of Jan. 7. Would you be able to come to Lansing so we could talk between 9-10 a.m.? If so, I'll make sure Beth Emmitt, my scheduler, confirms with Maxine Murray."

Saturday, Dec. 26, or Monday, Dec. 28: Getting organized

We need to get the ball rolling on creating a healthy water communications team – potentially Mel Brown of TED and Ron Leix of MSP's Emergency Management and Homeland Security Division. Both are genuine and empathetic, and can convey information in a reassuring way.

This duo would work with DHHS' and DEQ's respective communications teams, but also free up those teams to work on other issues not related to Flint water. The healthy water team would be the point people for anything concerning Flint water and lead issues, and will have the authority to assist Harvey Hollins, cut red tape for researchers who want access to DHHS and DEQ records, respond to media requests, edit and/or write press releases in conjunction with the Governor's communications team and more.

Rich Baird or another appropriate person needs to discuss with Steve Arwood and Col. Etue about "borrowing" Mel and Ron. We would like to introduce these two at the January press conference with the Governor and Mayor Weaver, saying, "These are the folks who will answer questions and provide information to media and stakeholders about the Flint water crisis."

Monday, Dec. 28, or Tuesday, Dec. 29: Asking researchers for help

Nick Lyon reaches out to Virginia Tech researcher Marc Edwards and Hurley Hospital's Dr. Mona Hanna-Attisha to help state lead and water experts who have worked on Flint's issues. The purpose is to share information, compare results and track how those results were reached to ensure best practices and accurate reporting.

We'd ask this of Edwards and Hanna-Attisha:

- Your research has been eye opening and we're hoping you'll be willing to join an effort to ensure Flint's water is safe.

- We'd like you to sit down with state epidemiologists and other researchers so you can discuss lead levels and other issues related to the Flint water crisis. There have been variances and we want to be as accurate as possible.
- We want you to have as much access to our data as is possible under HIPPA laws so we can determine the extent of the problem.
- We want the team to brainstorm ways to get Flint's water back to safe levels for drinking, and to help families learn how they can mitigate any effects from lead.
- Once the water is safe, we want your help in showing the people of Flint that their water is drinkable.
- If you're willing to help, we'd like to announce this at a press conference in January and would love to have you both attend, if possible.

In addition, Capt. Chris Kelenske and/or Nick Lyon need to explore more ways to help Flint, including the idea of an imminent danger declaration. *Has MSHDA explored HUD grants to help families who need to upgrade their service lines? Are there other resources we can draw from?*

Tuesday, Dec. 29: Governor releases statement on Flint water

This statement is meant to manage expectations on the timing of the report (probably another month at least) and to signal that action may come sooner than that (the Jan. 4 changes and those to be announced at the press conference).

"I've been briefed on the recent meeting of the task force studying the Flint water situation and I've read the report from the Office of the Auditor General on the processes used by DEQ to monitor Flint water.

"The bi-partisan task force has worked tirelessly to interview Flint, Genesee County, state and federal officials to complete its independent analysis. They are reviewing hundreds of documents at all levels of government and from the public health science community.

"I'd like to thank the task force for keeping me apprised of their continuing investigation. As they uncover more facts, it's clear to me we can do better. Their report may take another month or so, but if we need to make changes more swiftly, I plan to take immediate action.

"No matter what the testing requirements were, they were not enough to prevent this crisis.

"When it comes to matters of health and quality of life, we're committed to doing everything we can to protect the well-being of our citizens. I understand there can be disagreements within the scientific community. That is why I have told my directors at MDEQ and DHHS to invite every external scientist who has worked on the Flint water issue to the state laboratory facilities to work as partners with us. Together, we should be able to affirm that we're using the very best testing protocols to ensure Flint residents have safe drinking water and that we're doing proper monitoring and remediation of blood levels and other health impacts over the long term.

"I want the Flint community and all citizens of Michigan to know how very sorry I am that this has happened.

"But I know an apology isn't enough. We've already allocated $10 million to test the water, distribute water filters, and help in other ways. On Thursday, I called Flint Mayor Karen Weaver, and we're going to sit down in the next week to discuss other ways the state can offer assistance.

"What happened in Flint is inexcusable. I want to assure residents there that we will work hard to make things right."

Monday, Jan. 4 – Personnel changes

Dave Murray talking point: "I can't speak to the specifics, but yes, there have been changes in personnel at the DEQ. We'll announce soon who you can contact to get information about Flint's water situation. For now, you can call me."

Thursday, Jan. 7 – Meeting between the Governor and Mayor Karen Weaver

Governor's talking point: "We had a great meeting today. Mayor Weaver had some great ideas that we want to flesh out. We'll announce soon how we plan to move forward in solving the problems with Flint water."

Possibly Jan. 11 or 13 - Press conference with the Governor and Mayor Weaver to announce action plan

Also in attendance: Point person Harvey Hollins, Directors Nick Lyons and Dan Wyant, Capt. Chris Kelenske, Healthy Water communications team Mel Brown and Ron Leix, Sen. Jim Ananich, Rep. ???, Marc Edwards?, Dr. Mona Hanna-Attisha, who else?

Talking points:

Weaver announces more state money to help Flint and talks about how she's encouraged by the Governor's action plan and looks forward to working with Harvey Hollins.

Harvey briefly describes his role – as the boots on the ground in Flint and the coordinator for state resources.

Gov. Snyder reiterates his sadness over the situation and says it calls for extraordinary measures, which the state is prepared to make:

- The state will form a team of independent and state water and lead level experts to go over the various results. The team will include Virginia Tech's Marc Edwards and Hurley Hospital's Dr. Mona Hanna-Attisha, along with state epidemiologists, DEQ experts, etc.
- The team will have full access to DEQ and DHHS records.
- Mel Brown and Ron Leix will be the Healthy Water team and serve as point people for all things Flint water and lead levels.
- The state is exploring the best options to provide more help for Flint, including an imminent danger declaration, HUD grants for infrastructure improvements, etc.
- We will document what we learn from this experience to help other cities with water/lead issues.

Subject: OAG letter

Here is a summary of answers from the Office of the Auditor General in response to questions mostly posed by Sen. Jim Ananich's office (the auditor added a few questions in the 11-page report). The questions came as the OAG conducts an audit of the Office of Drinking Water and Municipal Assistance's handling of the Flint water crisis.

Conclusions:

While the City Council voted in March 2013 to move to the KWA pipeline, it didn't designate the Flint River as an interim water source. But the DEQ had approved the river as a backup source for emergency purposes in 2006. The treated water met safety standards in quarterly tests by the Flint WTP, but Flint had never tested its effect on the distribution system.

In an email review of key DEQ managers to determine if there was an effort to conceal information, only one email exchange raised red flags. The EPA had asked DEQ in February 2015 if Flint had a corrosion control program; the DEQ responded the city had an optimized program in place. But in April the EPA asked again, and the DEQ said that the Flint Water Treatment Plant (WTP) was not doing corrosion control. DEQ later explained that the first answer was referring to its LCR program, in which it monitors a new water source (in this case, the Flint river) for lead/copper for two consecutive six-month periods to determine if corrosion treatment is necessary. The report says there's no reason to believe that DEQ willfully misrepresented information to the EPA. It also concludes that ODWMA employees appeared to have notified management properly about the unfolding Flint water situation.

DEQ did not consult with the EPA on how best to apply the Lead and Copper Rule (LCR) monitoring practices after the switch to Flint water, but from past experience, DEQ believed it was doing so correctly by doing two rounds of six-month monitoring on the new water source before determining optimal corrosion control. The EPA disagreed with DEQ's interpretation of the LCR, but later stated that the LCR was open to interpretation. It then clarified the rule; the upshot: corrosion controls already in place when Flint was on Detroit water should have been maintained after the switch.

DEQ should have notified the Flint WTP to start corrosion controls once the first round of six-month sampling results arrived in late March 2015 and showed the water exceeded acceptable lead levels.

DEQ doesn't oversee the Flint WTP so it doesn't have any accountability measures to ensure the WTP is collecting water samples from tier 1 homes, i.e., residences with lead service lines, soldering or plumbing. Instead, DEQ relies on Flint's certification of sample sites. The auditor suggests DEQ should consider an independent verification of the sampling pool or Flint's certifications. In November 2015, Flint admitted that it had no way to ensure the sites were all tier 1. Water samples came from 175 randomly distributed testing bottles. DEQ has asked Flint to verify its prior samples by this Wednesday (12/30).

There's been controversy that DEQ dropped two sampling sites with high lead levels from its second six-month review. It was appropriate for DEQ to do so because those sites did not meet federal criteria. It was also appropriate for DEQ to require flushing taps the night before sampling to ensure faucets didn't contain overly stagnant water.

Charts show that most water samples were taken in the sixth month of the six-month testing period. The report said it's tough to determine if the lateness of the sampling affects the accuracy.

The report ends with an excellent timeline. I have attached the report in case you want to review the timeline on page 11.

Draft statement to respond to reporters:

The letter from the Office of the Auditor General includes some criticisms, but also reflects that state officials were following accepted protocols, or in one case, an interpretation of the corrosion control program that the EPA later clarified.

But we need to do better in ensuring Flint residents have safe water and tracking children affected by elevated lead levels. We continue to work with the bipartisan task force that is reviewing all the actions at the state, local and federal level and is expected to offer recommendations in a month or so. Gov. Snyder is committed to working with Flint Mayor Weaver and officials on these issues.

Here is a summary of answers from the Office of the Auditor General in response to questions mostly posed by Sen. Jim Ananich's office (the auditor added a few questions in the 11-page report). The questions were posed as the OAG conducts an audit of the Office of Drinking Water and Municipal Assistance's handling of the Flint water crisis.

Conclusions:

- While the Flint City Council voted in March 2013 to move to the KWA pipeline, it didn't designate the Flint River as an interim water source. But the Department of Environmental Quality had approved the river as a backup source for emergency purposes in 2006. The treated water met safety standards in quarterly tests by the Flint Water Treatment Plant, but Flint had never tested its effect on the distribution system.

- In an email review of key DEQ managers to determine if there was an effort to conceal information, only one email exchange raised red flags. Subject: Ananich Statement

Just FYI I did do an on cam with him to but this statement came prior to that.

"The Auditor General has provided an important piece of this puzzle and I'm sure the extended report they are working on will reveal additional information," said Ananich. "What's clear is that corrosion control should have been used and there are serious failings in our system that must be addressed. Between the FOIA emails released recently and these findings, it's obvious that legislative oversight is the best way to see how all of these pieces fit together. I expect holding hearings to be high on the agenda when the Legislature returns."

Thanks!

The questions were posed as the OAG conducts an audit of the Office of Drinking Water and Municipal Assistance's handling of the Flint water crisis.

Conclusions:

While the Flint City Council voted in March 2013 to move to the KWA pipeline, it didn't designate the Flint River as an interim water source. But the Department of Environmental Quality had approved the river as a backup source for emergency purposes in 2006. The treated water met safety standards in quarterly tests by the Flint Water Treatment Plant, but Flint had never tested its effect on the distribution system.

In an email review of key DEQ managers to determine if there was an effort to conceal information, only one email exchange raised red flags. The Environmental Protection Agency had asked DEQ in February 2015 if Flint had a corrosion control program; the DEQ responded the city had an optimized program in place. In April the EPA asked again, and the DEQ said that the Flint Water Treatment Plant was not doing corrosion control. DEQ later explained that the first answer was referring to its Lead and Copper Rule program, in which it monitors a new water source (in this case, the Flint river) for lead/copper for two consecutive six-month periods to determine if corrosion treatment is necessary. The report says there's no reason to believe that DEQ willfully misrepresented information to the EPA. It also concludes that Office of Drinking Water and Municipal Assistance employees appeared to have notified management properly about the unfolding Flint water situation.

DEQ did not consult with the EPA on how best to apply the Lead and Copper Rule monitoring practices after the switch to Flint water, but from past experience, DEQ believed it was doing so correctly by doing two rounds of six-month monitoring on the new water source before determining optimal corrosion control. The EPA disagreed with DEQ's interpretation of the LCR, but later stated that the LCR was open to interpretation. It then clarified the rule: Corrosion controls already in place when Flint was on Detroit water should have been maintained after the switch.

DEQ should have notified the Flint WTP to start corrosion controls once the first round of six-month sampling results arrived in late March 2015 and showed the water exceeded acceptable lead levels.

DEQ doesn't operate the Flint WTP so it doesn't have any accountability measures to ensure the WTP is collecting water samples from tier 1 homes, i.e., residences with lead service lines, soldering or plumbing. Instead, DEQ relies on Flint's certification of sample sites. The auditor suggests DEQ should consider an independent verification of the sampling pool or of Flint's certifications. In November 2015, Flint said it had no way to ensure the sites were all tier 1. Water samples came from 175 randomly distributed testing bottles. DEQ has asked Flint to verify its prior samples by this Wednesday (12/30).

There's been controversy that DEQ dropped two sampling sites with high lead levels from its second six-month review. The auditor determined it was appropriate for DEQ to do so because those sites did not meet federal criteria. It was also appropriate for DEQ to require flushing taps the night before sampling to ensure faucets didn't contain overly stagnant water.

Charts show that most water samples were taken in the sixth month of the six-month testing period. The auditor said it's difficult to determine if the lateness of the sampling affects the accuracy.

Independent Review Confirms State Made Decision to Use Flint River, Failed to Ensure Corrosion Control

Lawmakers Ananich, Neeley call for more answers, resources

LANSING, Mich. — Senate Democratic Leader Jim Ananich (D–Flint) and State Representative Sheldon Neeley (D–Flint) responded today to an independent review that confirmed that Michigan's Department of Environmental Quality failed to ensure proper corrosion control was used to treat Flint River water and that the State was responsible for the decision to use the river as the City of Flint's primary drinking water source.

The letter from the State Auditor General was the initial response to questions raised by Sen. Ananich in October. The Auditor General is working on a more thorough review and expects to have additional information in the coming months.

"The Auditor General has provided an important piece of this puzzle and I'm sure the extended report they are working on will reveal additional information," Sen. Ananich said. "What's clear is that corrosion control should have been used and there are serious failings in our system that must be addressed. Between the FOIA emails released recently and these findings, it's obvious that legislative oversight is the best way to see how all of these pieces fit together. I expect holding hearings to be high on the agenda when the Legislature returns."

In response to the question about whether corrosion control treatment should have been maintained when the switch for the water source was made to the Flint River, the Auditor General letter concludes, "We believe that corrosion control treatment should have been maintained."

With regard to how the decision was made about using the Flint River as the primary drinking water source, the letter states, "Although the Flint City Council voted in March 2013 in support of moving to the KWA pipeline, the vote was silent on the use of Flint River water as a temporary drinking water source."

This is contrary to recent claims that somehow this local vote was in favor of using the river.

"This is another example of how the state failed initially, and continues to fail by not treating this situation like the emergency it is," Rep. Neeley said. "We need answers, we need action, and we need them sooner rather than later."

Sen. Ananich and Rep. Neeley have been calling for legislative hearings and a more aggressive response since the Flint water crisis began. They also have been working with local and federal officials on securing additional resources to make safe water available to all residents, and to combat the health impacts of the lead that has been consumed.

[*Editor's note: A copy of the Auditor General letter is available upon request.*]

Subject: Office of Auditor General letter

Jim,

I heard you were seeking a response to the letter from the Office of the Auditor General.

First, I wanted to make sure you had the letter:http://www.audgen.michigan.gov/finalpdfs/15_16/l761032015.pdf

Here is our statement, which you can attribute to me:

The letter from the Office of the Auditor General includes some criticisms, but also reflects that state officials were following accepted protocols, or in one case, an interpretation of the corrosion control program that the EPA later clarified.

But we need to do better in ensuring Flint residents have safe water and tracking children affected by elevated lead levels. We continue to work with the bipartisan task force that is reviewing all the actions at the state, local and federal level and is expected to offer recommendations in a month or so. Gov. Snyder is committed to working with Flint Mayor Weaver and officials on these issues.

We appreciate the efforts of the Auditor General and will carefully consider all of the recommendations contained in the letter.

Jim, for your background, here is a summary of answers from the Office of the Auditor General in response to questions mostly posed by Sen. Jim Ananich's office (the auditor added a few questions in the 11-page report). The questions were posed as the OAG conducts an audit of the Office of Drinking Water and Municipal Assistance's handling of the Flint water crisis.

Conclusions:

- While the Flint City Council voted in March 2013 to move to the KWA pipeline, it didn't designate the Flint River as an interim water source. But the Department of Environmental Quality had approved the river as a backup source for emergency purposes in 2006. The treated water met safety standards in quarterly tests by the Flint Water Treatment Plant, but Flint had never tested its effect on the distribution system.

- In an email review of key DEQ managers to determine if there was an effort to conceal information, only one email exchange raised red flags. The Environmental Protection Agency had asked DEQ in February 2015 if Flint had a corrosion control program; the DEQ responded the city had an optimized program in place. In April the EPA asked again, and the DEQ said that the Flint Water Treatment Plant was not doing corrosion control. DEQ later explained that the first answer was referring to its Lead and Copper Rule program, in which it monitors a new water source (in this case, the Flint river) for lead/copper for two consecutive six-month periods to determine if corrosion treatment is necessary. The report says there's no reason to believe that DEQ willfully misrepresented information to the EPA. It also concludes that Office of Drinking Water and Municipal Assistance employees appeared to have notified management properly about the unfolding Flint water situation.

- DEQ did not consult with the EPA on how best to apply the Lead and Copper Rule monitoring practices after the switch to Flint water, but from past experience, DEQ believed it was doing so correctly by doing two rounds of six-month monitoring on the new water source before determining optimal corrosion control. The EPA disagreed with DEQ's interpretation of the LCR, but later stated that the LCR was open to interpretation. It then clarified the rule: Corrosion controls already in place when Flint was on Detroit water should have been maintained after the switch.

- DEQ should have notified the Flint WTP to start corrosion controls once the first round of six-month sampling results arrived in late March 2015 and showed the water exceeded acceptable lead levels.

- DEQ doesn't operate the Flint WTP so it doesn't have any accountability measures to ensure the WTP is collecting water samples from tier 1 homes, i.e., residences with lead service lines, soldering or plumbing. Instead, DEQ relies on Flint's certification of sample sites. The auditor suggests DEQ should consider an independent verification of the sampling pool or of Flint's certifications. In November 2015, Flint said it had no way to ensure the sites were all tier 1. Water samples came from 175 randomly distributed testing bottles. DEQ has asked Flint to verify its prior samples by this Wednesday (12/30).

- There's been controversy that DEQ dropped two sampling sites with high lead levels from its second six-month review. The auditor determined it was appropriate for DEQ to do so because those sites did not meet federal criteria. It was also appropriate for DEQ to require flushing taps the night before sampling to ensure faucets didn't contain overly stagnant water.

- Charts show that most water samples were taken in the sixth month of the six-month testing period. The auditor said it's difficult to determine if the lateness of the sampling affects the accuracy.

Subject: RE: statement from Ananich

Obviously, I don't think that's a fair assessment. The Governor's 10-point plan includes an unprecedented look at lead levels in Flint schools, free testing around the community, free home water filters until we can be confident the system returns to acceptable levels, and a series of immediate, near-term and long-term steps to protect Flint families. We are doing the work and presenting the data as it comes forward.

I'm a department spokesman. I'm as good as the information I get to work with. And we've tried to do a very careful job of making sure folks in Flint get accurate information on this issue, because it is a very serious one for thousands of families. This administration acknowledged an error in October and has been working hard since then to partner with communities and deliver necessary resources to protect kids and families.

Also while I've got you, if you care to respond to this statement by Senator Ananich (since we're running his year-end story today):

"The administration still, I think, seems to lack the sense of urgency that I expect, but they've done some positive steps in the right direction. They still have folks, Brad Wurfel for one, who are still making statements that aren't really true, I think, to the public. You can't say it's the faucets in the school. If it wasn't for the corrosive, poisonous water, we wouldn't have a problem. It's another example of trying to make it sound like it wasn't their fault as opposed to just fixing the problem."

…That should be all for today. Thanks

Subject: Letter from the Office of the Auditor General

Paul, I didn't know if you are writing about the letter from the Office of the Auditor General regarding the DEQ and Flint water.

First, here's a copy of the letter in case you don't have it: http://www.audgen.michigan.gov/finalpdfs/15_16/l761032015.pdfhttp://www.audgen.michigan.gov/finalpdfs/15_16/l761032015.pdf

Our statement:

The letter from the Office of the Auditor General includes some criticisms, but also reflects that state officials were following accepted protocols, or in one case, an interpretation of the corrosion control program that the EPA later clarified.

But we need to do better in ensuring Flint residents have safe water and tracking children affected by elevated lead levels. We continue to work with the bipartisan task force that is reviewing all the actions at the state, local and federal level and is expected to offer recommendations in a month or so. Gov. Snyder is committed to working with Flint Mayor Weaver and officials on these issues.

We appreciate the efforts of the Auditor General and will carefully consider all of the recommendations contained in the letter.

Paul, for your background, here is a summary of answers from the Office of the Auditor General in response to questions mostly posed by Sen. Jim Ananich's office (the auditor added a few questions in the 11-page report). The questions were posed as the OAG conducts an audit of the Office of Drinking Water and Municipal Assistance's handling of the Flint water crisis.

Conclusions:

- While the Flint City Council voted in March 2013 to move to the KWA pipeline, it didn't designate the Flint River as an interim water source. But the Department of Environmental Quality had approved the river as a backup source for emergency purposes in 2006. The treated water met safety standards in quarterly tests by the Flint Water Treatment Plant, but Flint had never tested its effect on the distribution system.

- In an email review of key DEQ managers to determine if there was an effort to conceal information, only one email exchange raised red flags. The Environmental Protection Agency had asked DEQ in February 2015 if Flint had a corrosion control program; the DEQ responded the city had an optimized program in place. In April the EPA asked again, and the DEQ said that the Flint Water Treatment Plant was not doing corrosion control. DEQ later explained that the first answer was referring to its Lead and Copper Rule program, in which it monitors a new water source (in this case, the Flint river) for lead/copper for two consecutive six-month periods to determine if corrosion treatment is necessary. The report says there's no reason to believe that DEQ willfully misrepresented information to the EPA. It also concludes that Office of Drinking Water and Municipal Assistance employees appeared to have notified management properly about the unfolding Flint water situation.

- DEQ did not consult with the EPA on how best to apply the Lead and Copper Rule monitoring practices after the switch to Flint water, but from past experience, DEQ believed it was doing so correctly by doing two rounds of six-month monitoring on the new water source before determining optimal corrosion control. The EPA disagreed with DEQ's interpretation of the LCR, but later stated that the LCR was open to interpretation. It then clarified the rule: Corrosion controls already in place when Flint was on Detroit water should have been maintained after the switch.

- DEQ should have notified the Flint WTP to start corrosion controls once the first round of six-month sampling results arrived in late March 2015 and showed the water exceeded acceptable lead levels.
